Nottinghamshire County Council

16/01478/OUTM Proposed Housing Development on land at Main Street Blidworth

Planning to meet increasing demand for school places – the context

The Education Act 1996 dictates that Nottinghamshire County Council has a duty to secure school places for all children of statutory school age who are resident in the county and whose parents want them to be educated in a Nottinghamshire state-funded school. Subsequent Education Acts have built upon this but the obligation placed on local authorities has not changed.

Funding for the provision of additional school places is derived from two sources:

1. An allocation from DfE (Education Funding Agency) to meet demand from the families occupying existing housing stock. Increasing demand on places in this case is a direct result of either rising birth rates or a net inward migration.
2. Developer education contributions which are required to mitigate the impact of new housing developments on infrastructure.

Forecasting the demand for school places – the methodology

The methodology employed by the County Council for forecasting pupil numbers is the same as that used by most other local authorities.

The County Council groups primary schools across the county into 'primary planning areas'.

Population profile data is aggregated to postcode and age group, which enables the numbers of children in each cohort to be mapped against school catchment areas. In turn, this data is aggregated to the primary planning areas. This provides the number of young people living in each planning area organised by National Curriculum Year.

The statutory school census data for an individual school for each of the past 3 years is compared to the corresponding population profile data for the planning area the school is in. This results in a 3 year period percentage intake from the planning area. These 3 percentages are averaged; however, the average is weighted towards the more recent census year.

This percentage is then applied to the appropriate population profile data for the next 5 years to create a first admission and infant to junior prediction for the following 5 years.

There is always a degree of movement into and out of schools throughout the year and this is calculated to produce a 'cohort flux' – for example, losses or gains between one school year and the next. The average cohort flux for each year group over the past 3 years is calculated for the school which is then applied to each cohort projection to predict numbers for the following year.

The same methodology is employed to forecast the demand for secondary school places.

Demographic changes

In line with the underlying national trend, Nottinghamshire has seen an increase in birth rates across the county since 2007. This is reflected in the overall school population but is particularly well illustrated in the numbers of primary age children (Figure 1).

Figure 1 - Total number on roll in mainstream primary schools

The total primary number on roll (NOR) had seen a steady decline in numbers between 2001 and 2010 but subsequent years have seen a sharp increase in total numbers to the school year 2014/15.

The numbers of 4 year olds entering the school system show a sharper increase (Figure 2). Across the whole of the county, the number of 4 year olds began to increase around 2006.

Figure 2 - Total number of children in mainstream schools - reception year

Given the falling rolls of previous years, this sharp increase in numbers of 4 year olds did not impact on the county's overall ability to provide pupil places where they were needed. However, as smaller cohorts of older children are replaced by larger cohorts of young children, pressure on places inevitably increases. Figure 3 shows the cohort profile across the whole county in January 2015.

Figure 3 – January 2015 size of cohorts in mainstream schools – Reception to Year 6 – whole county

Meeting expected demand resulting from proposed housing developments

The County Council's consideration of whether or not developer contributions towards education provision are required will be informed by the projected demand for places compared with the known capacity figures. *Seemingly 'spare' capacity at a school does not necessarily equate to there being sufficient capacity at that school as it is a DfE expectation that schools should not operate at more than 90-95% of their capacity and NCC officers consider recent trends in in-year applications to ensure that a school is able, wherever possible, to accommodate the normal movement of families around the area. This does NOT include new families moving into an area as a result of them occupying newly built houses*.

The projected demand for places, taking into account the proposed development, are calculated during the planning application process using the formulae described in the County's planning obligations strategy. This, in turn, is translated into a funding requirement which is again detailed in the strategy as a per pupil place cost. Any costs to be paid to the County Council will be index linked through the Section 106 agreement.

Where a new development is proposed in an area with sufficient projected capacity, no financial contribution will be required; however, where the proposed development would result in insufficient projected capacity, a contribution will be required. There may be a requirement, in some cases, for the provision of a completely new school. This is likely to be the case if the proposed development is in an area where all schools have already been expanded to reach their site capacity, or where the development is large enough to sustain its own school. Where a new school is required, the base level of contribution required will be an appropriate area of land for the required size of school plus the cost of building the school.

If there is insufficient capacity to accommodate the increase in pupils likely to be generated by a development and the development itself cannot enable the necessary provision the County Council will raise objections to the development.

Analysis of the impact of application 16/01478/OUTM – Residential Development at Main Street Blidworth - on the education infrastructure which will serve the development

The proposed development is situated within the primary planning area of Rainworth and the secondary catchment area of Joseph Whittaker School. Although there is no guarantee that all families in the proposed new housing would apply for places in these schools, it is very likely that this will be the case, especially if families are unable to travel far to a school. The mitigation required is based upon this assumption but this is moderated by an analysis of the availability of places at all schools within the planning area.

The charts below illustrate:

- the projected total demand for places within the planning area
- the projected demand for places in each cohort for the next 5 years

The total projected demand for places typically masks the pressure on first admissions places in the area resulting from the increased birth rates in recent years.

Rainworth Planning Area

		Projected demand for places - Rainworth											
		Year group							Totals				
		R	1	2	3	4	5	6	KS1	KS2	Known Housing	5%	Total
	Jan 2016 actuals	164	141	129	124	130	128	98	434	480			914
Projections	2015/16	133	123	130	124	125	125	99	386	473			859
	2016/17	166	147	143	129	128	130	128	456	515	27	53	1051
	2017/18	121	166	148	142	132	127	129	435	530	54	53	1072
	2018/19	131	121	167	147	145	131	126	419	549	81	53	1102
	2019/20	134	131	122	166	150	144	130	387	590	108	53	1138
	2020/21	129	134	132	121	169	149	143	395	582	135	53	1165

KS1 yr group size	150	KS2 yr group size	150

In the above table, the red shaded cells illustrate the cohorts which are projected to exceed the Published Admission Number (PAN) for that year and any yellow shaded cells in the right column show where the projected TOTAL demand for places exceeds the total capacity in the planning area.

The above data clearly illustrates the pressure on school places at schools in the Rainworth planning area. There is no capacity to accept more children.

Secondary

The proposed housing development is in the catchment of Joseph Whittaker School.

		No on Roll	Projections									
School	Net Cap	Jan 2015	2015/16	2016/17	2017/18	2018/19	2019/20	2020/21	2021/22	2022/23	2023/24	2024/25
Joseph Whittaker	1269	1051	1243	1239	1273	1304	1328	1336	1369	1377	1417	1370

		No on Roll	Projected Surplus/Deficit									
School	Net Cap	Jan 2015	2015/16	2016/17	2017/18	2018/19	2019/20	2020/21	2021/22	2022/23	2023/24	2024/25
Joseph Whittaker	1269	1051	26	30	-4	-35	-59	-67	-100	-108	-148	-101

The above data clearly illustrates the pressure on school places at The Joseph Whittaker School. There is no capacity to accept more children.

Conclusion

Nottinghamshire County Council therefore have no alternative but to request primary education contributions from any proposed housing development at Main Street Blidworth.

A proposed development of 30 dwellings would yield an additional 6 primary and 5 secondary places.

We would therefore wish to seek an education contribution of £68,730 (6 x £11,455) to provide primary provision to accommodate the additional pupils projected to arise from the proposed development.

Secondary requirements will be subject to CIL.

The information above is given on the understanding that it is based on the best information available to Nottinghamshire County Council at the time. District Council colleagues are advised to contact the County Council again in the future if they require a 'project' to be named. None of the information above should be used to denote a project.

Date: November 2016
