## A Monthly Analysis of Employment, Unemployment and Jobs

EB 5/14

### April 2014

Unemployment according to the Government's preferred measure was 2.21 million in the three months to March 2014, down 133,000 from the previous three months and down 309,000 from the same period a year ago. The unemployment rate was 6.8%, down 0.4 from the previous three months and down 1.0 from a year earlier.

The unemployment rate for 16-24 year olds was 19.0% in the three months to March 2014, down 1.0 percentage points from the previous three months. Comparisons of youth unemployment over time are complicated by the fact that, unemployment rates are calculated as the number of unemployed people divided by the economically active population (those unemployed plus those employed). Since comparable records began in 1992, the proportion of people aged from 16-24 in full-time education has increased

substantially from 24.3% for March to May 1992 to 42.5% for January to March 2014. Increasing numbers of people going into full-time education reduces the size of the economically active population and therefore increases the unemployment rate.

**New Disclosure Control Procedures with JSA Claimant Count Data**

A new disclosure control procedure has been introduced with JSA claimant count data on NOMIS with effect from 15th November. The procedure follows an interim review of the confidentiality of JSA claimant count data, and is required for compliance with the National Statistics Code of Practice for Data Access and Confidentiality. This is an interim measure pending a thorough assessment of the risk to the confidentiality of claimant count data early next year.

The procedure is the primary suppression of any cell count of 1 or 2, which is instead denoted by the symbol '#'. A true value of zero continues to be shown as 0.
