

Dear,,

Further to below please find attached excel spreadsheet containing requested information.

We undertook the level 1 scour assessment work in 2014. The required level 2 assessments are being undertaken in conjunction with our principal bridge inspection programme when the additional site information can be collected. We have 24 level two scour assessments left to do but to date have so far not identified any bridges with a scour risk rating of 1 or 2. The bridges with outstanding level 2 risk assessments together with those already rated at risk level 3 or 4 are checked after major flood events in addition to the usual general and principal inspection programme.

Regards

Rob Driver
