

NOTTINGHAMSHIRE POLICE AND CRIME PLAN

PERFORMANCE FRAMEWORK 2021 TO 2025

QUARTER 3 2023/24

PERFORMANCE TO 31 DECEMBER 2023

INTRODUCTION

The Nottinghamshire [Police and Crime Plan 2021-25](#) sets the strategic direction for the police and partner agencies in tackling and reducing crime and improving local police and victim services during the 2021 to March 2025 period. The plan sets three simple objectives:

Preventing crime and protecting people from harm

Responding efficiently and effectively to community needs

Supporting victims and communities to be safe and feel safe

This framework is designed to support the Commissioner, partner agencies and the Police and Crime Panel in tracking the delivery of performance outcomes linked to the plan. Indicators are reviewed and reported on a quarterly basis via the statutory Police and Crime Panel and Commissioner's Strategic Resources and Performance Board.

The Coronavirus pandemic and subsequent restrictions imposed from 23 March 2020 had a significant unprecedented impact on trends in crime and service demand during 2020 and 2021. Consequently, the 2020/21 year does not provide a reliable and meaningful baseline against which future performance outcomes can be assessed.

Performance ambitions for the planning period have therefore been set in the context of benchmarking with other police force areas and informed views on what can be reasonably achieved in the current environmental conditions with the resources available. In many cases, this is simply shown as an expected direction of travel.

Where no specific performance ambition has been set, figures are shown in comparison to the 2019/20 pre-COVID baseline year.

Work will be undertaken to migrate the Performance and Insight report to Power BI in 2023/2024 with a view to enabling more interactive profiling of outcomes at community safety partnership level.

STRATEGIC OBJECTIVE 1: PREVENTING CRIME AND PROTECTING PEOPLE FROM HARM

1A. Making our streets, villages, towns and city safer

Total recorded Neighbourhood Crime continues to trend downwards in comparison to this time last year, and still sits over a third lower than the pre-Covid baseline level. As explained in Footnote 2, some of this downwards trend is resultant from the removal of 'Burglary – Residential Unconnected Building' from this count. However, both Vehicle Crime and Theft from Person have seen reductions on this time last year (-7.3% and -6.1% respectively) which will not have been impacted by changes in the Home Office counting rules.

The Force uses daily reports and analytical products to understand the crime picture within Neighbourhoods and across City and County commands. This enables a prompt response to emerging patterns and trends and ensures a problem-solving approach to support crime prevention. The Force also continues to invest in Neighbourhood Policing resources (Neighbourhood Officers and PCSOs).

As part of previous Safer Streets funding, officers completed an engagement project with regards to high levels of ASB and associated offending. This offered provision of immobilising equipment and target hardening (providing bike locks and better CCTV in key areas), as well as work with the Fire Service.

In relation to Vehicle crime, significant arrests of offenders has seen offences decreasing as much as over -50% in certain areas. Furthermore, when offences are identified, they are placed on the Force's social media to inform and warn residents in affected areas.

Successful introduction of the business crime forums/shop watch radio link across areas has seen shop thefts decrease in some areas, and the Force continues to educate members of the public using media campaigns to prevent further offences.

¹ Residential Burglary, Personal Robbery, Theft from Person, TOMV & TFMV

² From April 2023 the Home Office categorisation of Residential Burglaries changed, splitting along the new categorisations of Burglary – Residential Home, and Burglary – Residential Unconnected Building. The figure denoted by this footnote marks the first instance of reporting using the category of Burglary – Residential Home in isolation (Unconnected Buildings are not included in this count)

³ Theft of and Theft from Motor Vehicle

STRATEGIC OBJECTIVE 1: PREVENTING CRIME AND PROTECTING PEOPLE FROM HARM

The number of First Time Entrants (FTE) into the Youth Justice System across Nottinghamshire continues to decrease quarter-on-quarter, having now sat below pre-pandemic baseline level, and the target level, for the past three quarters. The fall over the last quarter has been due to both City and County, however the largest overall decrease has been seen within the County, with levels now -12% lower than this time last year, and -16.3% lower than baseline.

The greater trend is one of reduction, with Nottinghamshire following this trend. We are seeing the continued embedding of Outcome 22, despite national uncertainty around this disposal, which is having a positive overall impact in reducing the criminalisation of children. The County OOC panel continues to work together to agree outcomes which take into account both the child's circumstances and also the impact of their behaviour on victims and communities.

The panel has recently benefitted from a 'child first' briefing which is reflective of the continued developmental push. This is an area of continued refocusing, both strategically and operationally, with a current drive to reduce out of court and diversionary timescales which should have a greater impact on the effectiveness of interventions.

The MyFuture programme continues to offer an effective diversionary route where partners are able to identify children's needs earlier enough and are aware of the MyFuture pathway.

Although recorded violent knife crime has not shown much change since this time last year (+0.5%), it has increased over the OPCC's target level but is below the pre-pandemic baseline. Concurrently, recorded possession of weapons offences continue to increase across all quarters, with a +6.8% increase on this time last year.

The Force continues to encourage proactive work in relation to knife crime, violence and drugs, with officers finding individuals in possession of knives or finding offensive weapons in private premises through stop and searches or warrants.

It was recognised that DVPNs/DVPOs had reduced in the earlier part of 2023, which has been addressed through increased training to frontline Sergeants and Prisoner Handling Staff was delivered throughout the year. Increased messaging on the Intranet to raise awareness has also been undertaken, to encourage the use of DVPNs and DVPOs overall which appears to have been successful, as it has shown a +12% and +13.9% increase in DVPNs and DVPOs respectively.

Regarding the +31.3% increase in DV Disclosure Scheme disclosures, it is noted that _____, as well as an increase in awareness within the media.

The number of granted Stalking Protection Orders has increased again since the previous quarter, and now sits at +126.7% higher than this time last year. During 2022 and 2023, all Divisional Officers received a 2.5-hour input on stalking, which incorporated the importance of Stalking Protection Orders. It is believed that this has contributed to the increase in the number of Stalking Protection Orders applied for by the force and subsequently granted.

Domestic Abuse (DA) crimes have increased over the last 12-month period and have risen by +2.7% since the same period last year. It is possible that this is a consequence of increased reporting by victims and improved identification of DA crimes by officers. This is supported by the 12-month reduction in non-crime domestic occurrences (-9.6%).

	% L&D referrals diverted into MH services	21.0%	1.7%	23.0%	11.0%	10.0%	26%	n/a	n/a

There continue to be increases in those with substance use needs, however this may partially be because of increased recording and monitoring following the release of the 'From Harm to Hope Strategy.'

Housing numbers remain below the 12 months to December 2022 however have increased by +4.9pp against the last quarter and there has been a positive increase in offenders employed after 3 months against the same period last year and the previous quarter.

Although the past quarter has seen a slight decrease in IOM cases on the previous quarter, there has been a +54.8% increase since this time last year, and a +138.8% increase in number of successfully removed offenders. The government introduced the 'Acquisitive Crime scheme' whereby offenders who receive more than 3 months for a neighbourhood offence are required to wear a GPS tag on release. All of these cases are taken into IOM for monitoring and information sharing purposes as best practice, which does also impact cohort size.

Despite levels of desistance remaining high, they have experienced a drop this quarter and are now at 77%.

L&D is an all-vulnerabilities model, so it's worth noting that people with a range of difficulties are referred to the service. For the most recent reporting period 40% of the people coming into custody (n3584) were referred to L&D (n 1395).

Of those with mental health needs identified and referred into services. 99 people were identified as having their needs already met and so were not further referred.

The recording system for L & D referrals changed in Dec 2022 and resulted in the data being skewed. This has resulted in a comparison with no value. The anomaly was only for that quarter and so relevant comparisons can continue to be made moving forward.

¹² "Desistance" refers to the number of individuals within the fixed IOM cohort who did not go on to reoffend in the period. Desistance has now replaced the previous measure (reduction in average reoffending risk), as this is no longer part of the IOM suite of measures due to a change in recording framework.

When comparing to this time last year, 999 Calls for service has experienced a +6.1% increase. This reflects the national trend which has noted a +12% increase on 2022 figures.

Although 101 Calls for service have seen an increase nationally from this time last year, the Force has seen a -10.9% decrease. This can be partially explained by a technical issue in 2022 which saw a number of 'ghost' 101 calls, meaning realistic comparisons cannot truly be made.

There has been a channel shift from 101 calls to digital contact, with single online home form submissions increasing from 8,526 in 2022 to 20,780 in 2023 (+143%). There has also been an increase in use of the Live chat function, which launched in August 2022. In 2023, 10,205 Live chats were recorded, on an upward trend which peaked in October.

¹³ Strength/FTE includes all Officers and Staff even those seconded Out of Force.

Overall levels of online crime have increased slightly by +2.3% since this time last year. However, the proportion of online crimes classified as “online facilitated” (i.e., the crime occurs offline but includes online elements as part of the MO, such as theft of an item after a meeting arranged through Facebook Marketplace) has fallen by -31.2%.

The -2.0% decrease in reports to Action Fraud when comparing this period to the same period last year was not due to any attributable variable, and appears due to natural reporting fluctuation.

	Anti-social Behaviour Incidents: % Repeats	28.4%	30.8%	30.5%	30.2%	30.4%	30.1%	-0.7% pts	n/a

The number of people killed or seriously injured on roads has increased in the past quarter and has risen above levels seen before the pandemic. There are several possible explanations for this:

- 1) The implementation of the new CRASH reporting system, as new systems have historically had an impact on these figures.
- 2) Continued recovery of traffic volume post-Covid, which currently is only at 95% of pre-pandemic figures.
- 3) Changes in types of transport leading to more vulnerable road users (e.g., e-scooters, cyclists, etc.).

New system implementations tend to increase figures in comparison to previous reports due to new ways of categorising and analysing data. The KSI stats have also altered as a result, namely when categorising injuries. With more choice concerning injuries, CRASH will automatically assign the injury classification according to the injury detail given. This is therefore a possible factor in the difference, as previously officers would classify the severity of the injuries themselves.

As noted in previous quarters, levels of recorded ASB continue to fall quarter-on-quarter and are now -7.9% lower than this time last year, and -8.5% lower than the pre-pandemic baseline.

The Force has invested heavily in Safer Streets which has impacted ASB in hotspot areas, with some areas seeing as much as a -51% reduction against a 3-year rolling average. The Force has worked together with Designing Out Crime Officers (DOCO) to design out ASB in hotspot areas, as well as working extensively to improve knowledge and recording of civil ASB powers. Placing more PCSOs in areas with high ASB is also showing a positive effect on police recorded ASB.

Making improvements in the Control Room to ensure best use of resources to combat ASB, focusing on early intervention and response to incidents also further assisted.

Some areas have noted a large portion of ASB calls relating to vehicle ASB. As such, this was made a local policing priority over the last six months. Following this, there has been a marked decrease in reports.

¹⁸ Figures reported are from 6 months prior to the column header date (actual end date given in parentheses) as collection of this data frequently lags occurrence dates.

	Criminal Asset Applications (POCA 2002) ²¹	92	66	75	73	63	75	+13.6%	+9

There has been a -35.7% decrease in viable firearm discharges when comparing this period to the previous (based on a 3-year rolling). An increase in imitation firearms could play a part in this decrease, as there is a higher level of ease with accessing imitation firearms compared to viables, and individuals could look to use these as an intimidation tactic.

Comparing the current 3-year rolling average with last year's shows that, in 2020 there were 15 viable firearm discharges, and within that, shotgun discharges were higher than average (eight in total for 2020).

A total of £72,644 ARIS funds (Asset Recovery Incentivisation Scheme) has been received by the force during the latest quarter following previous successful criminal asset recovery operations.

²⁰ Non-imitation weapons only (Real Firearm) that have been discharged (data provided for the Home Office ADR)

Satisfaction rates amongst victims of domestic abuse are relatively stable and this quarter sits at +1.0% pts higher than this time last year.

Meanwhile, satisfaction rates amongst hate crime victims continue to rise each quarter and now sit at +3.2% pts higher than pre-pandemic baseline. The hate crime team have taken a determined approach to improving officer understanding around hate crime, but also, driving improvements for victims. The team undertake a high level of auditing and scrutiny, ensuring compliance with policy/procedure, and chase outstanding actions where possible. In addition to this, routine welfare calls are made to victims to ensure they are safe, well, and up to date with their report. Hate crime also has Inspector oversight to ensure compliance. This overall determined approach has gone a long way to drive improvements in the service delivered for victims.

There has been a change in service provider for Victim Services. The numbers shown include some low figures from during the changeover between Qtrs 2 and 3 2023. It is anticipated the numbers will further increase moving forward. Increased demand is being seen across all services.

	FGM (Police recorded)	1	0	0	0	0	0	+/-0	+/-0

The total number of identified crimes under the 'hidden harm' category has fallen by -7.2% since this time last year, predominantly driven by a decrease in identified 'honour-based' violence and child criminal exploitation (NRM referrals).

A possible reason for the impact in figures could be due to the law around the age of marriage changing to 18 in February 2023. Furthermore, the Honour-Based Abuse team are limited by the data submitted by officers and there could be further opportunity for further training, as identified in a previous quarter, on identification and recognising HBA/forced marriage/FGM cases.

The fall in child criminal exploitation (NRM referrals) could be in part due to children offending outside of Nottinghamshire, and in such instances any NRM would be submitted to the Force on which the offence was committed. Referrals received from Nottinghamshire County Council have also fallen in 2023 compared to 2022, whereas Nottingham City Council has remained stable.

²⁶ Following review, the method of classifying RASSO has been updated, adding 'Sexual Grooming', 'Exposure or Voyeurism', and 'Abuse of Child Through Sexual Exploitation' to existing crime types under this category. This change is to better align with other forces with regards to the crimes they consider as RASSO, and thus bring greater parity between our reported figures and theirs. It should be noted that only the way these crimes are classified has been modified: offences that did not previously fall under the RASSO category were still recorded and investigated with the seriousness that they warrant.

▲	Evidence-led prosecutions: Domestic Abuse ²⁹	n/a	368	366	372	378	374	+1.6%	+6	

The number and percentage of domestic crimes closed via Outcome 16 has decreased since the previous quarter (-1.5% pts) and since this time last year (-3.1% pts). This decrease correlates with the increase seen in the number of Domestic Abuse (DA) positive outcomes; this is buttressed by the improved DA arrest rate.

The Monthly Force DA Standards Group also ensures scrutiny across all areas of DA and help to manage and drive-up performance.

²⁸ Percentage shown is outcome total divided by number of offences created or an outcome applied during the 12-month period. All RASSO-related data have been refreshed to align with the new method of classification (outlined on page 10).

	Crimestoppers: Positive conversion rate	5.8%	2.3%	2.3%	2.7%	2.6%	2.6%	+0.3% pts	n/a

There has been a -25% decrease in Special Constabulary actual strength when comparing to this time last year. Reasons for a loss in Specials numbers include Officers joining regular employment as Officers/Staff and University Specials finishing and moving area/deciding to leave. 6 officers joined in July 2023 and recently concluded their training, and there was no intake in October 2023 which could account for lower figures.

There are three planned recruitment intakes for 2024.

The total number of Police Cadets has seen a decrease of approximately -25% since the last quarter, due to some cadets leaving the programme, but spaces have been offered from the waiting list to join in January 2024. Main reasons for leaving were cited as – non-attendance, disengaged, relocation, other commitments, and personal reasons.

	Disabled (compared to Non-Disabled)	+ 1.2% pts	- 4.3% pts	- 5.0% pts	- 5.8% pts	-4 pts	-4.8 pts	-0.5 pts	Lower

The -7.3% decrease in police recorded hate occurrences from this time last year is in line with National trends, and with a decrease in reports, it would be expected that there would also be a corresponding decrease in repeat reports (-2.9% pts).

While there has been an increase in the number of recorded stop and searches since this time last year, this figure has decreased relative to the previous quarter and still sits lower than the pre-Covid baseline. The number of stop and searches resulting in a positive outcome continues to decrease, however this can still be possibly explained by the Force's efforts to improve recording.

Moreover, BAME disproportionality relating to stop and searches continues to decrease and has been brought to a level one-third less than pre-Covid, which is reflective of the work which has occurred in training officers, and a greater focus through the Powers board as well as the Independent scrutiny panel.

Public confidence in the police remains higher among minority ethnic groups than that of White British, although there has been a slight decrease in the latest quarter.

Public confidence among female respondents has improved when compared to male respondents following the sharp decrease during 2022/23, believed to have been impacted by national events.

Public confidence among people with limiting long term disabilities remains consistently lower than that of the wider population.
