

## Appendix 1

The chlamydia detection rate, from 2012-2017, comparing Nottinghamshire with the England average:

[Chart exported from PHE Fingertips<sup>3</sup>]

The above graph has not yet been updated to include 2018 data, as there is a delay for these figures to be collated and released by PHE. However, the most recent PHE breakdown of quarterly data shows that **the upwards trend in Nottinghamshire's chlamydia detection rate is continuing** (see below). In fact, the Q2 2018 detection rate for Nottinghamshire was higher than both the East Midlands and overall England average.

Quarterly Chlamydia Detection Rates for NOTTINGHAMSHIRE ( Jan 2017 - Jun 2018 )

Detection Rate per 100,000 population

■ NOTTINGHAMSHIRE
