This Scoping Report has been prepared to cover all of the planning policy documents that will make up the Nottinghamshire Minerals and Waste Development Framework. It sets out the key issues and baseline information/evidence that will be used to help assess the impacts of our future policies and plans.

# Non-technical summary

#### Introduction to Sustainability Appraisal

The Sustainability Appraisal (SA) process is a way of ensuring that all plans and programmes which relate to land use issues are compatible with the aims of sustainable development. This includes all of the documents that will make up the Minerals and Waste Development Framework. The first documents to go through this process will be the Minerals Core Strategy and the Waste Core Strategy. As they develop they will be tested against an agreed set of sustainability objectives. These objectives are defined during the early stages of the process and set the framework for assessing the emerging plan documents and also monitoring their effectiveness. By going through this process, we can ensure that each plan document contributes towards the overall development of Nottinghamshire and does not conflict with the aims of other strategies and programmes that are intended to enhance our social, environmental and economic well-being.

SA is an on-going, iterative process. The initial information gathering stage helps to establish significant issues that need to be addressed by the emerging documents. The appraisal process then helps to refine these issues and options into a set of realistic, preferred options that have been assessed thoroughly. The key features of the sustainability process are therefore to:

- Collect baseline information and identify significant issues or trends;
- Predict the effects of the plan;
- Identify possible policy options;
- Consult others on the plan policies;
- Monitor the effects of the plan policies.

#### The Scoping Report

This scoping report is the first stage in the appraisal process and sets out the baseline data that has been complied as part of the information gathering phase. The report also considers relevant plans and programmes that may influence the Minerals and Waste plan documents or be affected by their policies. Having identified significant issues that should be addressed, the report then seeks to establish a suitable framework of sustainability objectives against which the proposed policies should be assessed.

The purpose of this report is therefore to decide on the scope and level of detail for the SA. The information and findings set out here are not final as the report is intended to involve other interested parties in the appraisal process and to identify any gaps in what is covered. In some cases the data may simply not exist, in which case, this will be noted along with proposals to overcome this when the next appraisal is carried out.

### Key findings of this Scoping Report

**Population** - the majority of the population of the plan area is concentrated within the main urban areas around Nottingham and Mansfield and the outlying market towns of Newark, Worksop and Retford. Significant growth in population is expected as the result of the planned future development of new housing and employment areas employment including two designated Growth Points around Nottingham and Newark.

**Transport** - there are generally good road and rail links to the rest of the UK, especially via the main north-south routes. Major improvement works are also underway or planned for several key roads. Key transport concerns are congestion and air quality. Although some mineral loads are transported by rail or barge the majority of both minerals and waste transport is by road. It may be possible to move more materials by rail or water in future but the economic viability of this is uncertain.

**Natural Environment and Biodiversity** - despite a wide range of important wildlife habitats and species, there have also been significant past losses due to the pressures of development. However the condition of key nature conservation sites is improving and the importance of maintaining the area's green infrastructure as well as designated sites is increasingly recognised.

**Historic and cultural heritage** - much of our preserved heritage dates from the middle ages onwards and can be seen in the large country estates, market towns, medieval castles and more recent industrial archaeology and the legacy of coal mining in many areas. The proportion of buildings at risk is higher than the national and regional average. There are a large number of conservation areas, registered parks and gardens and Scheduled Ancient Monuments but not all of our heritage assets are protected and much of the evidence of our past has not yet been investigated.

Landscape, countryside and townscape - parts of our countryside and open space remain threatened by development pressures to deliver new housing and employment opportunities, especially in the urban fringes and the Green Belt around Nottingham. Mineral working has had a significant impact in some areas but sensitive restoration can provide opportunities for landscape improvements or to create new features. The possible impacts of climate change may also alter the appearance of our landscape as the local temperature and water levels will dictate what kinds of vegetation can be sustained.

**Climate** - Nottinghamshire's climate is likely to follow the patterns generally being observed and predicted across the UK with increased rainfall, hotter and more unsettled summers, increased flooding and more frequent and severe storm events. The use of fossil fuels for energy is a major contributor to so-called greenhouse gas emissions along with methane from landfill. Transporting both minerals and waste also contributes to the overall level of vehicle emissions making the need to minimise road transport of minerals and waste a priority.

**Air quality** - is generally improving but air pollution along major transport corridors such as the A1 and M1 and around the main urban areas is still a concern. Power stations are a major source of Co<sub>2</sub> emissions. The transport of minerals and waste and emissions from the different types of waste processing are also potential sources of air pollution. However technologies that recover energy from waste also have potential benefits in terms of offsetting the need to burn fossil fuels.

**Water** - water supplies are likely to be sufficient to meet the current levels of planned housing and employment growth, but they are unlikely to support any additional increases and may be a constraint on the exact locations of new development. Groundwater protection is a major issue across a large part of our area and a significant constraint to the future development of landfill sites. River quality has seen a slight improvement but is still marginally lower than the regional and national figure. Nottinghamshire is also vulnerable to nitrate pollution, especially in north Nottinghamshire around Worksop, although the whole county is covered by a Nitrate Vulnerable Zone to limit further damage and try to lower existing levels.

**Soils** - outside of the urban areas, the county is largely agricultural and approximately 70% of Nottinghamshire's agricultural land is classed as grade 3 or above. Housing demand, in particular, means there are significant pressures for built development, especially on the urban fringe around Nottingham, Newark and Mansfield.

**Flood risk** - the wide Trent flood plain is a major development constraint for Nottingham and Newark especially. River and surface water flooding is a significant issue within the Trent Valley and also parts of Hucknall, Sutton-in-Ashfield and Kirkby-in-Ashfield. Mansfield, Worksop and Warsop could also experience localised problems.

**Health** - overall health indicators for Nottinghamshire are slightly worse than both the regional and national comparisons although life expectancy has grown closer to the national average. There are also wide variations between different parts of Nottinghamshire especially between urban and rural areas.

**Energy** - energy consumption has fallen slightly and the proportion of renewable energy used is increasing through the use of biomass fuels and wind turbines. The long term future of our three coal-fired power stations is uncertain but a new gasfired station has recently been developed near Newark. As well as supplying coal, more recently a number of small-scale onshore oil and gas sites have been developed and there are schemes to utilise mine gas from old mineral workings and possible coal bed methane deposits. Waste is also a source of energy in the county with small-scale landfill gas recovery, the development of anaerobic digestion schemes and a municipal waste incinerator in Nottingham. The need to provide local, decentralised sources of renewable, or low carbon energy, could increase the scope for using waste as a source of energy.

**Economy and Employment** - traditional industries have now largely given way to commercial, service and high-tech industries. Employment rates are slightly better

than the national average, but the number of businesses has declined over the last 2-3 years as a result of the recession. There are also wide variations in employment rates and income across the various districts. As the economy recovers, predicted growth levels will need to be supported by new infrastructure, especially in and around the main urban areas including new waste management facilities and the provision of construction and energy minerals. Minerals and waste are not themselves major employers but the development of a modern and innovative waste management industry based on greater re-use and recovery of resources could provide new employment opportunities.

**Minerals** - historic production levels have fallen from 5 million tonnes to 3.8 million tonnes during the recession. The most critical issues over the next 10-15 years will be maintaining adequate land banks of permitted reserves as there are shortfalls for aggregates and most other building and construction minerals. Rising energy prices are also expected to increase the pressure to work the County's surface coal mining resource and may see further investigation of new energy minerals such as coal bed methane and shale gas. Mineral extraction can have significant environmental impacts but also provides opportunities for creating new wildlife habitats, areas of open space and possible landscape improvements in some cases.

**Waste** - levels have fallen from an average of around 4 million tonnes of municipal, commercial and industrial and construction and demolition waste a year to an estimated 2.6 million tonnes. Waste is being managed more sustainably with an average of 42% of municipal waste and 52% of commercial and industrial waste now being recycled. Between 80% and 90% of construction and demolition waste is estimated to be re-used or recycled. Less waste is going to landfill and some municipal waste is recovered for energy through an existing incinerator in Nottingham. Existing waste management infrastructure is adequate to meet existing recycling targets but there is a significant shortfall of long term waste disposal capacity which will mean finding new disposal sites or the development of alternative may also be needed to support the planned housing and employment growth across the area. Overall, there is sufficient employment and industrial land available for additional waste recycling, recovery and sorting/transfer facilities but opportunities for new waste disposal sites are very constrained.

#### Taking a spatial approach

Although the issues highlight above have been grouped broadly into three themes, many of the issues highlighted above are inter-linked and should not be considered in isolation. One of the features of the spatial planning system is to look at the wider context and how different issues relate to each other. The minerals and waste documents will need to ensure that they provide an appropriate basis to identify adequate mineral resources/waste treatment to meet local and national need. It will therefore need to identify suitable locations for mineral extraction and waste treatment or disposal provide sufficient capacity whilst at the same time ensuring these are the most socially and environmentally acceptable.

### Proposed Sustainability Appraisal objectives

A range of draft SA objectives have been developed that take into account all the factors identified through the review of plans, policies, baseline data and key sustainability issues identified for Nottinghamshire. These SA objectives will then be used to focus further work in future SA documents.

## **Proposed SA Objectives**

1. Ensure that adequate provision is made to meet local and national mineral demand and to provide a network of suitable waste management sites for the safe treatment and disposal of waste.

2. Protect and enhance biodiversity at all levels and safeguard features of geological interest.

3. Promote sustainable patterns of movement and the use of more sustainable modes of transport.

4. Protect the quality of the historic environment above and below ground.

5. Protect and enhance the quality and character of our townscape and landscape.

6. Minimise impact and risk of flooding.

7. Minimise any possible impacts on and increase adaptability to climate change.

8. Protection of high quality agricultural land and soil.

9. Promote more efficient use of land and resources

10. Promote energy efficiency and maximise renewable energy opportunities from new or existing development.

11. Protect and improve local air quality.

12. Protect and improve water quality and promote efficient use of water.

13. Support wider economic development and promote local job opportunities.

14. Protect and improve human health and quality of life.

#### What happens next?

The scoping report provides an early opportunity for interested parties to comment, and ensure that the final SA report is robust enough to achieve its sustainable development objectives when appraising the MWDF. Copies of the SA Scoping Report have been provided to the main consultation bodies (Local Strategic Partnership, environment groups and neighbouring authorities for starters) and to other relevant authorities and stakeholders with an interest in the plan area. Chapter 6 of this report contains details of these consultees. Feedback from the consultation process, along with any other additional findings and updates, will be incorporated into the ongoing SA process.

# 1. Introduction – What is Sustainability Appraisal?

- 1.1 This scoping report represents the first stage of the Sustainability Appraisal process that was introduced through the Planning and Compulsory Purchase Act 2004. When complete the SA will ensure the authority integrates sustainable development principles into all of its plans and programmes undertaken as part of the MWDF process.
- 1.2 Sustainable development has a number of different definitions however for the purpose of the SA process the definition in the Government's *'Securing the future Delivering UK sustainable development strategy'* (March 2005) has been used. It states that:

"The goal of sustainable development is to enable all people throughout the world to satisfy their basic needs and enjoy a better quality of life, without compromising the quality of life of future generations. This will be pursued in an integrated way through a sustainable, innovative and productive economy that delivers high levels of employment; and a just society that promotes social inclusion, sustainable communities and personal wellbeing. This will be done in ways that protect and enhance the physical and natural environment, and use resources and energy as efficiently as possible."

1.3 The strategy contains five guiding principles for sustainable development:

#### • Living within environmental limits

Respecting the limits of the planet's environment, resources and biodiversity, to improve our environment and ensure that natural resources needed for life are unimpaired and remain so for future generations.

#### • Ensuring a strong, Healthy and just society

Meeting the diverse needs of all people and future communities, promoting personal well being, social cohesion and inclusion and creating equal opportunity for all.

#### Achieving a sustainable economy

Building a strong, stable and sustainable economy which provides prosperity and opportunities for all, and in which environmental and social costs fall on those who impose them (polluter pays), and efficient resource use is incentivised.

#### • Using sound science responsibly

Ensuring policy is developed and implemented on the basis of strong scientific evidence, whilst taking into account scientific uncertainty (through the precautionary principal) as well as public attitudes and values.

#### • Promoting good governance

Actively promoting effective, participative systems of governance in all levels of society, engaging people's creativity, energy, and diversity.

1.4 These principles form the basis for delivering sustainable development within the UK. Nottinghamshire County Council and Nottingham City Council have a vital role in supporting the aims of these principles in preparing their own policies and proposals for future development.

# The relationship between Sustainability Appraisal and Strategic Environmental Assessment

- 1.5 When preparing the various policy documents that make up our statutory development plan (the Plan), every authority must carry out an environmental assessment in accordance with the requirements of European Directive 2001/42/EC on the 'assessment of the effects of certain plans and programmes on the environment'. This is known as the Strategic Environmental assessment or SEA Directive.
- 1.6 Within the UK the concept of SEA has been broadened to include an assessment of economic and social impacts as well the specific environmental issues identified in the SEA Directive. This wider process of Sustainability Appraisal therefore incorporates all of the requirements of the SEA Directive. Throughout this document, the term SA is used to refer to the joint SA/SEA process and the methodology used incorporates all of the requirements of SEA. Table 7 in chapter 6 shows how this report meets the relevant SEA requirements.

# Other appraisals

1.7 The findings of the SA process will also be supported by other appraisals that are being carried out. As Nottinghamshire has a site of international importance for nature conservation, the Sherwood Forest Special Area of Conservation (SAC), we are also required to carry out what is known as a Habitats Regulations Assessment under separate legislation, which may lead to the need to undertake a more detailed Appropriate Assessment<sup>1</sup>. The other appraisal being undertaken is a county-wide Strategic Flood Risk Assessment<sup>2</sup>. This will build upon work already done by the Greater Nottingham authorities and the other Nottinghamshire Districts and look specifically at minerals and waste issues.

# What is the purpose of SA?

1.8 The purpose of SA is to promote better integration of sustainability considerations into plan preparation and adoption. SA is therefore an integral part of good plan-making and should not be seen as a separate activity. It is an ongoing and iterative process that will help us to identify and report on the

<sup>&</sup>lt;sup>1</sup> The Conservation of Habitats and Species Regulations 2010, which enact the EU Council Directive 92/43/EEC on the conservation of natural habitats and wild fauna and flora

<sup>&</sup>lt;sup>2</sup> Scott Wilson Strategic Flood Risk Assessment for Nottinghamshire 2011.

likely significant effects of the Plan (i.e. our various minerals and waste documents) and the extent to which implementation of the Plan will achieve the social, environmental and economic objectives by which sustainable development can be defined.

1.9 The SA process and the various stages of the plan making process are interlinked. Figure 1 illustrates the stages of both processes based on current Government guidance which has been used in preparing this report<sup>3</sup>.

# Purpose of the SA Scoping Report

- 1.10 The integration of sustainability considerations into the preparation and adoption of Plans is the key focus of the SA process. In line with Government guidance the SA Scoping Report is intended to determine consistency and compatibility between the SA Framework objectives and the Plan objectives.
- 1.11 The Scoping Report therefore lays the foundation for the whole SA process and focuses on the context of the Plan, which in this case is the Minerals and Waste Development Framework for Nottinghamshire (N.B. the waste policy documents of this framework are being prepared jointly with Nottingham City Council whereas the minerals policy documents will only cover the administrative area of Nottinghamshire County Council). The Scoping Report takes a holistic approach in order to determine if the Plan's objectives contribute towards sustainable development.
- 1.2 The Scoping Report is also the mechanism for developing a sound and robust SA Framework and appraisal methodology. Hence the Scoping Report forms the basis for the appraisal and the production of the SA Environmental Report. The Scoping Report details:
  - Other policies, plan's and programmes influencing the Plan and SA, including the international, national, regional and local policy context;
  - Baseline information and key sustainability issues, including economic, environmental, social and spatial factors;
  - Development of the SA framework and objectives;
  - Testing the emerging Plan objectives against the SA framework;
  - Methodology for testing development options and appraising effects of the Plan; and

 Outline of the proposed format and content of the SA Environmental Report.

#### The role of our minerals and waste policy documents

1.13 Every local authority must prepare a formal development plan for its area setting out its priorities for future development, where this should be located and key environmental constraints that should be addressed. The County and City Councils have a specific duty to do this for minerals and waste, where it is relevant to their area. We will therefore be preparing a series of individual policy documents to set out how much development we want to see and where. Minerals documents will only be prepared by the County Council but the waste documents (or Plan) will be prepared jointly with Nottingham City Council as waste issues affect both our areas. You can find full details of the documents we are preparing on our website as shown below.

# Community Involvement in SA

1.14 Community involvement, including the general public, interest groups, statutory bodies, local businesses and the minerals and waste industry, is a key part of the planning process. At this stage, the only formal requirement is to consult the Environment Agency, Natural England and English Heritage. These will all give their views on the work that has been carried out so far and will continue to provide advice on future stages of the appraisal. We have also sought informal advice from other stakeholders where appropriate. These include representatives from the minerals and waste industry, environmental and community groups. Other comments on the Scoping Report are welcome but can only be treated informally at this stage.

# Further information

1.15 If you would like any further information on this report or the Minerals Core Strategy please contact the Minerals and Waste Policy Team at Nottinghamshire County Council on 08449 808080 or email <u>development.planning@nottscc.gov.uk</u>. Full contact details are also printed on back cover of this report. The information in this report can be made available in alternative formats and languages if required.

# 2. Methodology

# Carrying out SA

2.1 Government guidance on carrying out SA defines 5 key stages leading up to the production of a Scoping Report. These are set out in Figure 1 below and our report has been structured according to these key stages

#### Figure 1. Preparation of Scoping Report

| Identifying other relevant policies, plans and programmes, and sustainability objectives |
|--|
| Collecting baseline information  |
| Identifying sustainability issues and problems   |
| Developing the SA framework  |
| Consulting on the scope of the SA  |

- 2.2 Information gathering is therefore the starting point for any SA in order to understand the current social, environmental and economic situation and possible future trends. The focus of the initial information gathering stage is therefore a review of all other relevant plans, programmes and strategies and the collection of baseline environmental, social and economic data. This will help to shape our future policies and proposals. A summary of the key messages and findings are included at the start of each chapter with the detailed results shown in the accompanying appendices.
- 2.3 This work has been carried out 'in-house' using our own environmental information where available, but also relies heavily on data from other agencies and organisations. Their input is acknowledged throughout and has helped to refine both the baseline data and the detailed objectives that will underpin this appraisal process. Copies of the comments received from these groups will be posted on the minerals and waste section of the County Councils website.

# The Nottinghamshire Partnership Approach to SA

2.4 All of the Nottinghamshire local authorities have come together to establish a county-wide joint sustainability appraisal partnership. This draws together a wide range of social, economic and environmental monitoring data, and policy information from across the county and city. Sharing information and expertise has helped to develop a common approach towards sustainability appraisal across each authority. This also includes a common template for

Scoping Reports to provide a consistent basis for SA in each area. This Scoping Report for minerals and waste follows the same basic approach but has been adapted where necessary to reflect specific minerals and waste issues.

#### Independent assessment

2.5 A team of independent consultants (from URS Scott Wilson Ltd) has also been appointed to audit and verify each stage of the Sustainability Appraisal to provide an independent and objective overview of the process. This ensures a consistent approach and draws on best practice from other authorities.

# Key findings and draft SA objectives

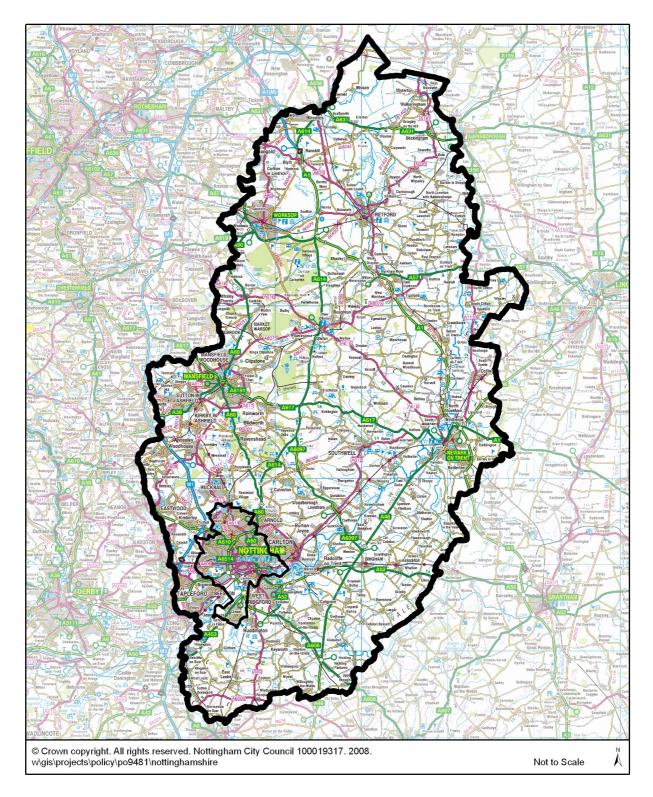

2.6 The key outcomes of each of the information gathering stages are summarised in the body of the text of the following chapters. With reference to the national and regional sustainable development objectives (where still applicable), these form the basis of the draft SA objectives. A full list of the relevant plans and programmes reviewed as part of the appraisal is shown in Appendix 1. The topics and indicators used in the baseline survey are shown in Appendix 2.

# Limitations of the SA process

2.7 Part of the SA process is to establish what information is currently available and whether there is other information that should be collected in future. This involves a wide range of organisations that may hold different sets of data. The data they hold may not always be comparable or it may not have been collected at regular intervals. This can make it difficult to identify significant trends. Considerable progress is being made to collate this information so that it is up to date and accessible but it is inevitable that the way data is collected, interpreted and monitored, will improve over time. Future stages of SA work will take account of any relevant changes.

# Future Timetable

2.8 As this scoping report will form the basis of future appraisal work for all or minerals and waste documents we cannot show a detailed timetable here. However, we will keep our programme for preparing new documents and carrying the relevant SA work up to date on the county council website at <u>www.nottinghamshire.gov.uk</u>.

# Plan 1. Map of the area covered by this scoping report

# 3. Other relevant Plans, Policies, and Programmes

#### Introduction

- 3.1 The purpose of reviewing other plans, programmes and policies is to identify relevant sustainability objectives and ensure that the aims and objectives of the Core Strategy and Development Control Policies are consistent with the purpose and aims of these strategies and plans. It is important to identify where there may be potential conflicts and also where our own minerals and waste policies or proposals could help contribute to the aims of other plans.
- 3.2 The review has looked at relevant documents, including legislation, plans, guidance and strategies, at the international, national and local level. These are listed in full in Appendix 1. The key messages from this review are set out in Table 1 below and have been carried through into the set of appraisal objectives that is being developed to help assess the likely effects of the Plan (see Chapters 5 and 6).
- 3.3 The key messages highlighted below are those which are considered relevant to minerals and waste as not all issues covered in other appraisals (i.e. at the district/borough level) will be relevant.

# Table 1: Key messages from the documents review

| Key messages  | Source of information   | Implications for SA            |
|---|---|--------------------------------|
|   |   | Framework                      |
| Natural environment and biodiversity  | The Johannesburg Declaration on Sustainable Development, 2002   | Requires objectives to protect |
| •   | • EU Directive on the management of waste from extractive industries 2006/21/EC   | and enhance biodiversity and   |
| <ul> <li>Ensure biodiversity is considered in all areas of decision</li> </ul>      | • EC Directive on the Conservation of Wild Birds 1979/409/EEC   | habitats at all levels.        |
| making;   | • EC Directive on the Conservation of Natural Habitats and of Flora and Fauna 1992/43/EC  |                                |

# 4. Baseline information and characteristics of Nottinghamshire

### Introduction

- 4.1 It is also important to have a good understanding of the current situation in terms of the social, economic and environmental wellbeing of Nottinghamshire. This helps to highlight any problems which the Core Strategies and subsequent documents should seek to address. It also provides a baseline of information against which to predict and subsequently monitor the effects of our policies.
- 4.2 A key part of the SA process is that each of the objectives is underwritten with comprehensive and up-to-date baseline information, using a reliable set of indicators that can be monitored over time. The indicators that have been used for each objective are shown in Table 4 (Chapter 6).
- 4.3 By comparing our own position to what is happening across the region, and nationally, we can establish where we are doing well and what needs to improve. Where there are also specific targets, such as those for recycling municipal waste, we can also use these as a benchmark to monitor our performance.
- 4.4 The baseline data collected for this report is set out in Appendix 2. This shows the most recent data for Nottinghamshire along with regional and national comparisons, where available. The table also includes any relevant targets and provides a commentary on the current position and any noticeable trends. Whilst, not all of the information is currently available, the data will continue to be refined and updated as part of the ongoing SA process.
- 4.5 The following paragraphs identify the key environmental, social, economic and physical characteristics of Nottinghamshire that have been identified from the baseline data and other information that is available.

# Key characteristics of Nottinghamshire

#### Area and population

4.6 Nottinghamshire is a large county, covering 2,085 square kilometres of the East Midlands area. It is made up of three distinct areas comprising the relatively affluent suburbs around Nottingham; the north-west towns and villages which share a coal-mining and textile heritage; and more rural areas to the south and east which are

characterised by prosperous market towns and villages along the Trent Valley. Nottingham, to the south of the county, is one of the UK's eight core cities and a major regional centre for the East Midlands. Although the administrative boundary of the city is drawn quite tightly, the extent of the built up area, its associated housing market and travel to work patterns reflect a wider influence over a more general area known as Greater Nottingham. This includes part of Ashfield, reaching north up to Hucknall and all of Nottingham's other surrounding districts which house the city's key suburbs. Outside Greater Nottingham, the main towns are Mansfield, Sutton-in-Ashfield and Kirkby-in-Ashfield, Newark, Worksop and Retford.

4.7 Nottinghamshire's overall population is just over 1 million people with around two thirds of these living in, or within easy reach of, Nottingham. Administratively, there are seven district and borough councils within the County Council area whilst Nottingham City Council carries out both the district and county functions as a unitary authority. Geographically and economically there are close links between the three cities of Derby, Leicester and Nottingham and the neighbouring towns such as Chesterfield and Doncaster. The county shares borders with Yorkshire, Rotherham and Doncaster to the north, Derbyshire to the west, Leicestershire to the south and North Lincolnshire and Lincolnshire to the east.

#### Transport

4.8 There are good transport links to the rest of the UK, especially via the main north-south routes of the M1. A1 and the East Coast and Midland Mainline rail lines. Work is taking place to widen sections of the A46 which should improve access to Leicester and Lincoln and improvements to the the A453 link into Nottingham from the motorway have now been approved by Government. Key transport concerns include congestion and air quality and the effect this may have on the rate of climate change. Congestion is improving but is focussed on the main routes into Nottingham, Mansfield, Newark and Worskop. Air pollution within Nottinghamshire is concentrated along major transport corridors such as the A1 and M1 and around the main urban areas. particularly Nottingham where eight AQMAs have been designated and another is about to be declared. Nottinghamshire supplies minerals locally, regionally and nationally. The majority is currently transported by road although some coal and desulphogypsum is transported by rail and some sand and gravel is moved by barge. Most of our municipal waste is managed within Nottinghamshire although small amounts do go to neighbouring counties for treatment. It is also likely that some of our commercial and industrial waste goes out of the county, with some specialist wastes possibly travelling regionally or even nationally.

#### **Natural Environment and Biodiversity**

- 4.9 Nottinghamshire has a wide range of important wildlife habitats and species although it has suffered significant losses due to the effects of industrialization and coal mining, urban expansion, intensive agriculture and commercial forestry. Large areas of semi-natural woodland have been lost along with traditional hedgerows and species-rich grasslands, plus 90% of the county's lowland heathland had been lost by early in the last century. Cumulatively, this has seen a dramatic reduction in biodiversity across the county and Nottinghamshire's Local Biodiversity Action Plan lists over 900 species and 25 habitats that are of conservation concern. However these downward trends are now being halted or reversed through pro-active management schemes, including the high quality restoration of minerals sites to create new habitats... Examples include the wetlands the Idle Valley Nature Reserve near Sutton and Lound, the creation of healthland habitats within Sherwood Forest and woodland planting across the Greenwood Community Forest.
- Although there are comparatively fewer areas of designated nature 4.10 conservation value here than in other parts of the East Midlands and the UK as a whole, Nottinghamshire still maintains important populations of key species such as great crested newt, water vole, white-clawed crayfish along with populations of notable invertebrates. There are also significant areas of heathland and acid grassland sites within Sherwood Forest which contains the only internationally important conservation site within the county - the Birklands and Bilhaugh Special Area of Conservation (SAC). However part of the county is now being considered as a possible Special Protection Area (SPA) for birds on the basis of its significant populations of nightiar and The county has 1 National Nature Reserve and 68 Sites of woodlark. Special Scientific Interest (SSSIs) which account for only 1.6% of the county area, compared to 7.5% nationally<sup>4</sup>. The condition of these sites is improving but fell just short of meeting the national target of 95% of SSSIs being in favourable or recovering condition by 2010. There are 50 Local Nature Reserves (LNRs) and more than 1300 local Sites of Importance for Nature Conservation (SINCs) also known as Local Wildlife Sites (LWSs), of which only around 20% are known to be in positive conservation management. In addition, there are areas of LDAP habitats that fall outside these designated sites, including species-rich grasslands, woodlands, wetlands and waterways, and other features that make up the wider network of green infrastructure across the county.

#### Historic and cultural heritage

4.11 Nottinghamshire has a long and rich heritage with evidence of early Iron Age and Bronze Age settlements in northern and central parts of the county, and a significant roman settlement at Mansfield. Important

<sup>&</sup>lt;sup>4</sup><u>http://www.nottinghamshire.gov.uk/home/environment/countryside/nature\_conservation/protectingbiodiversity.htm</u>

Viking finds are now also coming to light within Sherwood Forest. The county remained important through the middle ages and medieval times with royal castles and hunting grounds and enduring links to the legend of Robin Hood. Market towns at Worksop, Retford, Newark and Mansfield expanded during these times and the dissolution of the monasteries and forest clearances paved the way for the creation of large estates such as Clumber and Rufford. Nottingham and Newark played key roles in the skirmishes and sieges of the Civil War.

- 4.12 Nottinghamshire also has a long association with textile and clothing production with early cottage industries being subsumed by the spread of industrialisation and the mass development of factories, canals and railways. Throughout our history the River Trent has provided important trade links with many settlements along its banks. It also remains an important source of power for industry, with three major power stations along the Trent Valley. Just as important as the industrial revolution, have been the changes in agriculture which have changed our landscape and help to build the trade in wool and establish the rich merchants whose philanthropy then founded many of our important civic buildings. Nottingham's Lace Market area is a prime example of this historic legacy. Coal mining has also played a major part in our development as the power behind our industrialisation and a major employer until recent times.
- 4.13 Much of our preserved heritage dates from the middle ages onwards and can be seen in the large country estates, market towns and medieval castles and historic field patterns. From more recent times, the county has a large collection of industrial archaeology including frame-knitters cottages, lace factories and mills along with our former mining villages with their characteristic long terraces of worker's housing and skyline of colliery headstocks and spoil heaps.
- 4.14 Across Nottinghamshire there are over 4500 listed buildings. 5.8% of Grade I and II\* are considered to be at risk. This is worse than the situation both regionally and nationally. There are also 140 conservation areas, 28 registered parks and gardens and 183 Scheduled Ancient Monuments.

#### Landscape, countryside and townscape

4.15 Nottinghamshire is a generally flat county with rich rolling farmlands to the south, a central belt of mixed woodland and commercial forestry with patches of heathland and oak-birch woodland to the north, open agricultural landscapes to the east and pasture and woodland on the coal measure and magnesian limestone to the west. Key landscape features are the wide, flat river valleys with extensive farmland, and large, historic market towns such as Newark and Retford. More scattered rural villages are settled within the gently rolling Wolds to the south of the county. The concentrated urban development around

Nottingham and the impact of major transport corridors such as the M1 and A1, along with the legacy of coal mining in the west of the county reflect more recent industrial influences. The county's two main rivers are also significant landscape features and show the evidence of continuing sand and gravel extraction with extensive areas of former sand and gravel working that have been restored to open water - including the National Water Sports Centre at Holme Pierrepont. The county's three remaining power stations are also dominant features along the line of the Trent flood plain.

4.16 Much of our countryside and open space remains threatened by the impacts of intensive agriculture, urbanisation and future mineral working and many parts of the county have suffered from the historic loss of hedgerows and traditional field patterns. Urban fringes, especially in the Green Belt around Nottingham, face significant pressure for urban expansion to deliver new housing and employment opportunities. Likely future changes to our climate may also alter the appearance of our landscape as the local temperature and water levels will dictate what kinds of vegetation can be sustained.

#### Climate

4.17 Although local data is hard to source, Nottinghamshire's climate is likely to follow the patterns generally being observed and predicted across the UK. We have already started to see increased incidences of flooding and we can expect a general pattern of increased rainfall, hotter and more unsettled summers and increased flooding. There will also be increased incidents of freak weather including flash floods, high winds and storms. Overall greenhouse has emissions are falling, especially for Co<sub>2</sub>, but some of these changes cannot now be reversed. Mineral working is not a major source of emissions although transporting minerals will contribute to overall transport emissions and the use of fossil fuels for energy is another major contributor. The most significant emissions from waste are methane and Co<sub>2</sub>. Within the UK, landfill alone accounts for 27% of our methane emissions and is 20 times more powerful than Co<sub>2</sub>.

#### Air quality

4.18 Air quality is of major importance for climate and health as well as maintaining the diversity and quality of our natural environment. Nottinghamshire's air quality is generally improving but air pollution along major transport corridors such as the A1 and M1 and around the main urban areas is still a concern. Eight Air Quality Management Areas (AQMAs) have been designated on main routes into Nottingham because of the No<sub>2</sub> levels from traffic and a ninth is about to be designated. Emissions of Co<sub>2</sub> are mainly from commercial and industrial sources, especially from our power stations. Whilst there has been a slight overall reduction in Co<sub>2</sub>, the actual levels vary quite

widely between districts. Bassetlaw and Newark and Sherwood both have a much higher rate than Gedling for example.

#### Water

- 4.19 A large part of Nottinghamshire overlies the Sherwood Sandstone Aquifer which is one of the largest groundwater resources in the UK. This is now fully developed and water conservation measures are being put in place to manage future abstraction levels. Whilst water supplies are likely to be sufficient to meet the current levels of planned growth, they are unlikely to support any additional increases and may be a constraint on the exact locations of new development.
- 4.20 Our two main rivers are the Trent and Idle which have both seen extensive mineral working for sand and gravel and are an important part of the county's landscape, heritage and natural environment. Whilst there has been a slight improvement in river quality, this is still marginally lower than the regional and national figure. Nottinghamshire is also vulnerable to nitrate pollution, especially in north Nottinghamshire around Worksop, although the whole county is covered by a Nitrate Vulnerable Zone to limit further damage and try to lower existing levels.

#### Soils

4.21 Nottinghamshire's soil profile varies from generally light sandy soils in the north and central parts of the county with heavier, clay based soils in the far east and west. Outside of the urban areas, the county is largely agricultural and most (approximately 70%) of Nottinghamshire's agricultural land is classed as grade 3 or above suggesting that there is a significant amount of high quality agricultural land. Housing demand in particular, means that there are significant pressures for built development, especially on the urban fringe around Nottingham, Newark and Mansfield.

#### Flood risk

- 4.22 Nottinghamshire is a relatively flat county. The Trent Valley and the eastern edge of the county are the lowest lying areas, with slightly higher ground through the central and western belts. The main river catchments are the Trent, Leen, Derwent. Erewash and Soar. In terms of flooding, the Trent Valley accounts for a large percentage of the flood zone area across the county and it is estimated that over 20,000 properties along the urban part of the River Trent may be at risk from a 1 in 100 flood event.
- 4.23 The wide Trent flood plain is a significant development constraint for Nottingham and Newark but other areas including parts of Hucknall, Sutton-in-Ashfield and Kirkby-in-Ashfield are also at risk of surface water flooding from local rivers and drainage/sewer overflows.

Mansfield is considered to be at less risk overall but could still experience localised problems along with towns further north such as Warsop and Worksop.

#### Health

4.24 Overall health indicators for Nottinghamshire are slightly worse than both the regional and national comparisons although life expectancy has grown closer to the national average. There are also wide variations between different parts of Nottinghamshire with a twelve year gap in life expectancy between the least and most deprived wards. Worst affected are main urban areas of Nottingham, Ashfield and Mansfield with more rural, affluent areas such as Rushcliffe and Gedling having noticeably higher health scores. Obesity affects up to 15% of children and 25% of adults in Nottinghamshire and is linked to heart disease, diabetes and some cancers.

#### Energy

- 4.25 Nottinghamshire has traditionally been a significant energy supplier from its coal-fired power stations along the Trent Valley. A new gasfired power station near Newark is now operational. The county is also a source of fossil fuels from its remaining coal fields and the more recent development of small-scale onshore oil and gas sites. There are also a number of schemes using mine gas from old mineral workings for energy and permission has been granted for the exploration of possible coal bed methane deposits. Energy consumption here is highest for industry but overall consumption has fallen slightly and local figures also show an increase in the proportion of renewable energy used.
- 4.26 There are now 14 wind farms or smaller collections of turbines that have been developed and many of the county's schools have been converted to wood-fuelled boilers. Two of our three remaining power stations have also been converted to enable them to co-fire biomass fuels from energy crops. Waste is an existing source of energy in the county with small-scale landfill gas recovery helping to meet on-site needs or power adjacent development, and an increasing number of anaerobic digestion schemes. Within Nottingham municipal waste is recovered for energy at the Eastcroft Incinerator which has planning permission to expand in future. This generates 40,000 MWh of electricity and feeds the UK's largest district heating scheme which serves almost 5,000 homes and businesses in the city.
- 4.27 The City Council is ambitious to remain the UK's leading low carbon city and this could include further energy from waste schemes such as anaerobic digestion and a significant further expansion of the Eastcroft plant.

#### **Economy and Employment**

- 4.28 Nottinghamshire is historically known for its coal mining and textile manufacturing and Nottingham is still known internationally for its lace-making. Although many of our traditional industries are in decline, these have now largely given way to commercial, service and high-tech industries. Nottingham is an important centre for financial services, administration, telecommunications, pharmaceuticals and science and research supported by its two universities. The M1 corridor hosts a concentration of industrial and business park developments and Worksop has recently become a major centre for distribution.
- 4.29 Although employment rates here are slightly better than the national average, the number of businesses has declined over the last 2-3 years as a result of the recession. There are also wide variations in employment rates and income across the various districts/boroughs with parts of Nottingham, Ashfield and Mansfield particularly affected by low employment and deprivation. As the economy recovers, predicted growth levels will need to be supported by new infrastructure, especially in and around the main urban areas which are expected to be the main focus of future growth including the designated growth points for Nottingham and Newark. The minerals and waste industries are not themselves major employers although a large number of other sectors rely on minerals products for their raw materials (e.g. manufacturing, construction, energy generation). There are 9 national or multi- national firms currently working in Nottinghamshire and 10 smaller and locally based guarry operators. Waste management is again a relatively small employer with 8 national, 3 regional and around 70 smaller local firms and council run sites.

#### Minerals

- 4.30 Nottinghamshire has a diverse range of mineral resources including sand and gravel, building and asphalting sand, limestone, gypsum, silica sand, clay, coal and oil. Historic production levels have fallen dramatically during the recession from 5 million to 3.8 million tonnes per annum. The county is a major supplier of sand and gravel in the region and nationally and this accounts for the largest land take with over 3 million tonnes extracted every year. The deep mined coal industry which used to be the largest extractive industry in Nottinghamshire and which has had a huge influence on the social economic development of the county has been in major decline over the last 30 years. Today only one colliery remains active at Thoresby, near Edwinstowe.
- 4.31 The County faces a number of critical mineral planning issues over the next 10-15 years. The most significant will be maintaining adequate land banks of permitted reserves as there are shortfalls for aggregates and most other building and construction minerals. Resource depletion of sand and gravel in the Idle Valley is likely to see a major transfer of production to the Trent Valley over the next 10 years if the County is to

meet its reasonable share of regional aggregate production. Shortfalls in adjacent areas may also have an impact – for example a nationally important industrial limestone quarry at Whitwell in Derbyshire could extend into Nottinghamshire due to options in Derbyshire being limited.

- 4.32 Whilst mineral extraction is often seen as being environmentally destructive it provides some of the best opportunities we have for creating new wildlife habitats needed to restore our biodiversity and meet Local Biodiversity Action Plan targets, especially for wetlands. Many wetlands and other wildlife sites that exist today have been created out of former sand and gravel workings.
- 4.33 There has been no surface coal mining in Nottinghamshire for over 10 years but rising energy prices are expected to increase the pressure to work the County's surface coal mining resource found in the Erewash Valley. This factor combined with new technologies could also see the development of new energy minerals such as coal bed methane and shale gas which exist at depth beneath significant parts of the county. Although the timing and scale of the development of these resources are very uncertain these new resources could raise significant planning issues if they prove to be commercially viable.

#### Waste

- 4.34 Nottinghamshire produces around 4 million tonnes of municipal, commercial and industrial and construction and demolition waste a year. Figures over the last 2-3 years suggest there has been some reduction in the amount of waste produced but it is too early to tell whether this is a long term change or a more short term impact of the recent recession. However, it is clear that waste is progressively being managed more sustainably with just over 40% of municipal waste and more than 50% of commercial and industrial waste now being recycled<sup>5</sup>. Most of our construction and demolition waste is re-used or recycled on site possibly as much as 80% or 90% based on national figures.
- 4.35 Existing recycling capacity for municipal waste is adequate to meet current targets (i.e. 50% by 2020) but additional capacity will be needed to increase recycling above this level. There is a network of 15 Household Waste Recycling Centres across the county and two large Materials Recycling Facilities in Nottingham and Mansfield manage the majority of recyclables that are collected from kerbside. Recycling of commercial and industrial waste is focussed around Nottingham, Mansfield and Worksop but the number of capacity of sites will need to increase to achieve any further recycling increases. There are relatively few permanent recycling sites for construction and demolition waste, which are again concentrated around Nottingham, Mansfield and Worksop, but there are a number of temporary sites at existing

<sup>&</sup>lt;sup>5</sup> This is a national average based on Defra's 2009 Survey as no local data is available

quarries and inert landfill sites. As most construction and demolition waste is now managed on site existing capacity is considered adequate.

- 4.36 The Eastcroft Incinerator recovers energy from up to 160,000 tonnes of municipal waste a year but has permission to expand by a further 100,000 tonnes of either municipal or commercial and industrial waste. There are not currently any operational energy recovery schemes for commercial and industrial waste in the county.
- 4.37 Disposal capacity within Nottinghamshire is very limited with only three non-hazardous landfill sites serving the whole county. These are located near Nottingham, Newark and Worksop. There is also a fourth site near Retford which is currently moth-balled. At current disposal rates these sites are estimated to have around 4-5 years overall capacity remaining albeit one site has a relatively long life-span but can only take restricted quantities of waste each year. The sites in the north of the county are also very remote in terms of serving the main waste producing areas around Nottingham and Mansfield. There is only one inert site which is on the outskirts of Mansfield.

## 5. Sustainability issues

5.1 Based on the themes identified in the review of relevant plans and programmes (see table 4.1), and the issues highlighted through the collection of baseline data (see Appendix 2), a series of key sustainability issues, which are relevant to minerals and waste development within Nottinghamshire, have been identified and these are summarised in Table 2 below. This also considers the significance of each issue and how the Plan is likely to influence future outcomes (N.B. not all of the issues that are commonly covered in other SA work are relevant to minerals and waste and therefore issues such as educational achievement and housing standards are not considered within this scoping report). This section of the report also meets another key part of SEA/SA by looking at what would happen without the Plan i.e. how would this issue develop if we did not try to manage it? This therefore gives us a better understanding of how the Plan can be used to change the situation where necessary.

### Table 2: Sustainability Issues

|                                      | How can the plan influence this issue?               |
|--------------------------------------|--|
| Moderate/high - minerals and         | Policies should guide minerals extraction and        |
| waste development both have the      | waste management facilities to the most suitable     |
|                                      | locations in order to minimise environmental         |
| , ,                                  | impacts and avoid losses to important sites. They    |
| <b>e</b>                             | can also ensure that appropriate mitigation,         |
|                                      | compensation or enhancement is put in place to       |
|                                      | offset unavoidable losses and secure the creation    |
|                                      | of new habitat, especially as part of restoration    |
|                                      | schemes for new or pre-existing minerals sites.      |
|                                      | This can provide opportunities to contribute to the  |
|                                      | Local Biodiversity Action Plan targets by delivering |
|                                      | not just replacement but additional woodland,        |
| 0                                    | heathland and wetland areas for example. Without     |
|                                      | these measures in place the minerals and waste       |
|                                      | LDFs will make no contribution to meeting LBAP       |
|                                      | targets.   |
|                                      |  |
| would not be coordinated enectively. |  |
|                                      |  |
|                                      |  |
|                                      |  |
|                                      |  |
|                                      |  |
|                                      |  |
|                                      |  |
|                                      |  |
|                                      |  |
|                                      |  |
|                                      |  |
|                                      |  |
|                                      | -  |

| Sustainability Issue Identified  | Significance to Plan   | How can the plan influence this issue?  |
|--|--|---|
| Historic Environment and Cultural Heritage - the level<br>of Listed Buildings at Risk is considerably here higher<br>than the national average. Significant archaeological<br>remains are thought to lie along the Trent Valley but<br>farming and potential mineral working are a risk to crop<br>marks and the other limited evidence of these remains.<br>Further damage to the historic cultural heritage of the<br>area should be avoided. Where possible archaeological<br>remains should be preserved in situ.  | <b>Moderate/High</b> - unlikely to impact<br>on cultural heritage (i.e. local<br>traditions, arts/crafts etc.) but,<br>without proper controls, mineral<br>extraction in particular could<br>significantly affect areas of<br>archaeological interest including<br>physical remains, field patterns and<br>crop marks for example. Both<br>minerals and waste sites could also<br>affect the settings of listed buildings<br>and conservation areas. | Ensure development is located so as to minimise<br>the impacts on the historic environment. Promote<br>the protection of cultural/historic assets and ensure<br>preservation where possible. Arrange appropriate<br>mitigation and/or compensation where necessary.<br>Properly planned and managed mineral workings<br>can provide unique opportunities to investigate and<br>record archaeological features. Ensure sufficient<br>supplies of local building stones are available for<br>the conservation and restoration of our built<br>heritage. |
| <b>Air quality</b> – air pollution within Nottinghamshire is<br>concentrated along major transport corridors such as the<br>A1 and M1 and around the main urban areas,<br>particularly Nottingham where eight AQMAs have been<br>designated because of No <sup>2</sup> levels from traffic.<br>Emissions of Co <sup>2</sup> are mainly from commerce and<br>industry, particularly power generation. There has been<br>a slight overall reduction although actual levels vary<br>between districts. Bassetlaw and Newark and Sherwood<br>both have a much higher rate than Gedling for example.<br>It is essential that new development does not make<br>existing problems worse and that the cumulative impacts<br>of development are considered. | <b>Low/Moderate</b> – problems are<br>mostly linked to transport; energy<br>and industry but dust and/or<br>emissions from minerals and waste<br>operations, including transport,<br>could worsen existing air quality<br>problems if not properly managed.  | Ensure development minimises impacts on air<br>quality and avoids AQMAs. Locate development<br>to minimise transport distances and encourage<br>alternatives to road transport to help reduce<br>emissions of No <sup>2</sup> . Encourage reductions in<br>energy use to help limit Co <sup>2</sup> emissions.  |
| Water – there has been a slight improvement in river<br>quality but this is still marginally lower than the regional<br>and national figure. A large part of Nottinghamshire<br>overlies the Sherwood Sandstone Aquifer which is one<br>of the largest groundwater resources in the UK. This is  | <b>Moderate</b> - mineral extraction and<br>pumping could lower the local water<br>table - affecting surrounding<br>habitats. Waste sites, landfill in<br>particular, could contaminate  | Ensure minerals and waste development is located<br>so as to minimise any impacts on water quality and<br>minimises demand on local water resources.<br>Consider opportunities to incorporate sustainable<br>drainage systems. The provision of new/improved  |

| Sustainability Issue Identified  | Significance to Plan  | How can the plan influence this issue?   |
|--|---|--|
| now fully developed and water conservation measures<br>are being put in place to manage future abstraction<br>levels. Nottinghamshire is also vulnerable to nitrate<br>pollution and is covered by a Nitrate Vulnerable Zone.<br>Development must not harm existing water quality and<br>should help to improve this where possible. Water<br>abstraction is a particular concern in the area of the SAC<br>at Sherwood Forest.  | surface and ground-water sources if<br>not carefully located and managed.<br>Nitrates are generally related to<br>fertilizer/manure but uncontrolled<br>land spreading/composting could<br>have implications in some areas.   | waste water treatment facilities should help to<br>improve overall water quality. Ensure land<br>spreading/composting schemes comply with Defra<br>soil management guidelines to avoid nitrate<br>overload.  |
| <b>Soil</b> – most of Nottinghamshire's agricultural land is<br>classed as grade 3 or above suggesting that there is a<br>significant amount of high quality agricultural land.<br>Housing demand in particular, means that there are<br>significant pressures for built development, especially on<br>the urban fringe around Nottingham, Newark and<br>Mansfield.  | <b>Moderate</b> – mineral workings<br>typically cover a large area and<br>significant amounts of high quality<br>agricultural land could be lost if<br>development is not well located,<br>managed and restored.  | Seek to avoid the loss of high quality (best and<br>most versatile) agricultural land and guide<br>development to areas of lower agricultural value<br>where this does not conflict with biodiversity<br>interests. Use development management policies<br>to ensure proper soil handling and storage. Secure<br>restoration to agricultural use to prevent the long<br>term loss of productive land or important habitats.  |
| Sustainable Communities – local communities are<br>dependent on their basic physical infrastructure (e.g. raw<br>materials for housing, roads and energy as well as<br>clean, safe waste treatment and disposal) but there is<br>also increasing community concern about the effects of<br>development on local amenity and quality of life. There<br>has been a growing trend for wider and more effective<br>community involvement in the planning process and this<br>will be reinforced under the present Government's<br>'localism' agenda. There is also growing awareness of<br>the need to conserve energy, raw material and prevent<br>waste as part of an overall move towards a greener,<br>more sustainable society. | Moderate/High – without the<br>planned provision of adequate<br>mineral resources and waste<br>treatment/disposal facilities, local<br>areas would lack essential basic<br>infrastructure. However such<br>development can have significant<br>local impacts (e.g. visual<br>appearance, dust, mud, noise,<br>vibration, odour, light nuisance and<br>traffic). This could lead to an<br>unacceptable loss of amenity/quality<br>of life if not properly planned and<br>controlled and local people would<br>not have the opportunity to be<br>involved in significant local<br>decisions affecting them. | Ensure adequate provision of minerals resources<br>and an appropriate network of waste treatment/<br>disposal sites. Avoid development close to<br>sensitive areas and guide development to the most<br>suitable locations by balancing need against wider<br>environmental and social issues. Provide for<br>suitable mitigation to minimise noise, visual impact,<br>dust etc. and that sites are restored to a high<br>standard. Ensure that local communities are<br>involved in and understand the decision making<br>process from the outset and that relevant<br>information is widely available. |
| <b>Population</b> - the population of the county continues to grow steadily, and is forecast to increase above the   | <b>High</b> – population levels will have a significant effect on the demand for  | Ensure an adequate supply of minerals and sufficient new waste treatment and disposal  |

| Sustainability Issue Identified   | Significance to Plan   | How can the plan influence this issue?   |
|---|--|--|
| national average over the next 20 years. Nottingham<br>and Newark have been identified as future growth areas,<br>which will see considerable levels of new housing and<br>employment development. Even with greater levels of<br>waste prevention and re-use, this is likely to increase the<br>overall amount of waste produced, particularly if the<br>current trend for smaller households continues. The<br>new buildings and infrastructure needed to deliver this<br>growth will also increase the demand for mineral<br>products for use in construction, industry and for energy<br>generation.  | raw materials and energy and is<br>also likely to increase waste<br>production. Without the planned<br>provision of mineral resources and<br>waste treatment and disposal<br>facilities, there would be insufficient<br>infrastructure to support this growth<br>and any new minerals or waste<br>development would be market led<br>without proper consideration of<br>wider social and environmental<br>issues.                              | capacity to cope with planned growth Focus<br>new facilities in/close to those areas earmarked for<br>growth, especially around Nottingham and Newark.<br>Make the most of existing/planned transport<br>infrastructure and locate new development in the<br>most sustainable locations to balance social,<br>environmental and economic needs.  |
| <b>Health</b> - the overall health indicators for Nottinghamshire<br>are slightly worse than both the regional and national<br>comparisons although life expectancy has grown closer<br>to the national average. There are also wide variations<br>between different parts of Nottinghamshire with a twelve<br>year gap in life expectancy between the least and most<br>deprived wards. Worst affected are main urban areas of<br>Nottingham, Ashfield and Mansfield with more rural,<br>affluent areas such as Rushcliffe and Gedling having<br>noticeably higher health scores. NHS priorities include<br>tackling smoking, alcohol problems, drug use and<br>obesity and the local health partnership is keen to<br>encourage greater participation in sport and recreation to<br>promote healthier lifestyles. There is no published<br>evidence to suggest that waste management poses an<br>unacceptable risk to health but there is still a widespread<br>public perception of health risk from waste facilities. | Low/Moderate – the plan is unlikely<br>to have a direct impact on specific<br>health targets and outcomes but<br>emissions from vehicles or waste<br>processing could worsen existing<br>problems (e.g. asthma) if not<br>properly controlled. Without<br>effective planning, opportunities to<br>provide possible benefits such as<br>public open space and access for<br>recreation/relaxation as part of site<br>restoration would be lost. | Specific emissions controls would be decided by<br>the Environment Agency as part of the separate<br>environmental permitting system but planning<br>decisions about the type and location of future<br>mineral and waste developments will need to<br>ensure that existing problems (e.g. air quality) are<br>not made any worse and that they do not create<br>any additional risks. Policies could reduce impacts<br>by seeking to minimise transport distances, guiding<br>development away from areas with existing<br>pollution problems, and routeing vehicles to avoid<br>AQMAs for example. Policies could also be used<br>to encourage the restoration of sites to provide<br>additional open space, leisure and recreational<br>facilities which could all contribute to healthier<br>lifestyles for local communities. |
| <b>Economy and Employment</b> - although unemployment<br>rates here are lower than the national average, the<br>number of businesses has declined over the last 2-3<br>years as a result of the recession. There are also wide<br>variations in employment rates and income across the<br>various districts/boroughs with parts of Nottingham,<br>Ashfield and Mansfield particularly affected by low   | Low/moderate –minerals and<br>waste are not major employers but<br>provide some local jobs and the raw<br>materials for many other sectors<br>(e.g. construction, industry and<br>energy). Future economic recovery<br>is likely to increase demand, helping   | Ensure an adequate supply of minerals to meet<br>construction, energy and industrial needs e.g. sand<br>and gravel, clay for bricks, silica sand etc.<br>Encourage new/innovative waste technologies and<br>consider opportunities to promote new waste<br>facilities as a possible catalyst for other<br>development where other businesses could make  |

| Sustainability Issue Identified   | Significance to Plan  | How can the plan influence this issue?  |
|---|---|---|
| employment and deprivation. Boosting enterprise and<br>skills in these areas is a priority. As the economy<br>recovers, predicted growth levels will need to be<br>supported by new infrastructure, especially in and<br>around the main urban areas which are expected to be<br>the main focus of future growth including the designated<br>growth points for Nottingham and Newark.   | to stimulate the local economy and<br>employment – particularly in the<br>planned growth areas. This could<br>be hindered without adequate<br>mineral reserves. New waste<br>technologies and more segregation<br>of materials for recycling and re-use<br>may also generate new jobs and<br>provide opportunities for other<br>businesses to diversify into waste/<br>resource management but<br>developers may not invest without a<br>positive planning framework.   | use of waste materials as a resource or benefit<br>from energy supplied from anaerobic digestion,<br>gasification, incineration schemes etc.  |
| <b>Energy</b> – energy consumption has fallen slightly and local figures also show an increase in the proportion of renewable energy used. Nottinghamshire is a significant energy supplier from its power stations along the Trent Valley and also supplies energy minerals in the form of coal, oil and gas. Renewable energy sources are also increasing with the installation of 14 windfarms/ turbines and the conversion of existing power stations to co-fire biomass fuels. Future energy demands may increase with the development of new housing and businesses across Nottinghamshire. The impacts of climate change and finite supply of fossil fuels means it is becoming increasingly important to source <i>secure/reliable</i> and clean energy sources. There is a therefore a need to encourage more energy efficient development to help reduce overall energy use and to promote alternative forms of renewable and low-carbon energy. Waste is increasingly recognised as possible source of renewable/low carbon energy which could provide a local source of heat and power. Nottingham is already well placed to build on its existing district heating scheme (largest in UK) that is served by the Eastcroft Incinerator. | Moderate – minerals and waste<br>developments are not major<br>consumers of energy but having<br>appropriate policies in place could<br>secure more energy efficient<br>development and maximise<br>opportunities to generate renewable<br>or low carbon energy from waste.<br>Despite the move away from fossil<br>fuels, there will be a continuing need<br>for energy minerals such as coal, oil<br>and gas for the foreseeable future.<br>Without a proper planning<br>framework we may not be able to<br>ensure that sufficient reserves are<br>allocated. | Ensure adequate supplies of energy minerals<br>where available. Promote energy efficiency in<br>design and operation of minerals/waste processing<br>plants. Encourage use of waste as a source of<br>energy where this does not conflict with waste<br>hierarchy and where it can contribute to wider<br>development aims such as town centre renewal or<br>a new business park for example. Consider<br>possibilities for on-site provision of other sources of<br>renewable energy e.g. solar or wind power,<br>alongside mineral or waste development.<br>Contribution of energy from energy from waste<br>plants, other forms of energy recovery and landfill<br>gas have increased over time. |

| Sustainability Issue Identified   | Significance to Plan   | How can the plan influence this issue?   |
|---|--|--|
| <b>Flooding</b> – the risk of flooding is a significant issue for<br>many parts of Nottinghamshire. The greatest risk is from<br>the main rivers, particularly the River Trent. Surface<br>water drainage and the long-term possibility of mine-<br>water rebound are also a risk in some areas. Across the<br>Greater Nottingham area 20,000 properties are<br>estimated to be at risk of a 1 in 100 year flood. The<br>extensive floodplain for the River Trent also poses a<br>significant constraint to many types of development<br>including waste treatment facilities. Although minerals<br>development is generally flood compatible, any<br>development must be designed so as not to make<br>existing flood problems worse. All new development<br>should also be designed to withstand possible flood<br>impacts and where possible reduce overall flood risk by<br>making space for water and through the layout and form<br>of development. | <b>Moderate</b> – the poor location of built<br>development and/or structures that<br>could impede flood flows could<br>increase the risk of flooding in the<br>locality and further downstream.<br>Most future sand and gravel working<br>is likely to be in flood plain of River<br>Trent and could make existing<br>problems worse if not planned<br>carefully. If not properly controlled,<br>there would also be a pollution risk<br>from locating waste treatment or<br>disposal sites in areas at risk of<br>flooding.  | Ensure new development does not increase the<br>risk of flooding locally or elsewhere as a result of<br>changes to flood flows because of stockpiles,<br>buildings, hard surfacing etc. Plan the appropriate<br>location of sites managing non-hazardous waste to<br>avoid pollution risk – especially from landfill sites.<br>Where possible incorporate opportunities to<br>contribute to flood management as part of<br>development, such as the creation of flood water<br>storage. Ensure appropriate minerals available to<br>help construct flood defences where needed.                      |
| Climate change - emissions of greenhouse gases is a<br>nationwide concern that needs to be tackled in all areas.<br>Although emissions are reducing, the national targets<br>have not yet been made and further improvements are<br>needed. Local impacts are already being seen with<br>increased flooding and there is a need to ensure that<br>future development does not worsen the situation and is<br>itself able to withstand the possible future impacts of<br>climate change such as flooding, more frequent storms<br>and higher temperatures.   | <b>Moderate</b> – greenhouse gas<br>emissions are a major contributor to<br>climate change, particularly CO <sup>2</sup> and<br>No <sup>2</sup> from vehicles and industry.<br>Methane from landfill is also a<br>potent greenhouse gas along with<br>potential emissions from incineration<br>and other types of thermal<br>treatment. If sites were developed<br>ad-hoc this could lead to minerals/<br>waste being transported over longer<br>distances and a subsequent rise in<br>vehicle emissions. Without a plan<br>led approach development could<br>take place in the worst affected<br>areas leading to an increase rather<br>than a reduction in overall<br>emissions. There is also a risk that<br>sites would be developed without<br>adequate consideration of the likely | Reduce the need to transport minerals/waste<br>through appropriate site location and encouraging<br>more sustainable forms of transport such as rail or<br>water where viable. Encourage energy efficient<br>development to reduce emissions. The<br>minimisation of emissions should be actively<br>supported. Require site location, design and<br>operation to include safeguards against the likely<br>impacts of climate change such as heat, flooding<br>and storms. Promote waste as a potential source<br>of alternative low carbon/renewable energy to<br>offset the need for fossil fuels. |

| Sustainability Issue Identified  | Significance to Plan                                       | How can the plan influence this issue?  |
|--|--|---|
|  | impacts of future climate change                           |   |
|  | making our resources and                                   |   |
|  | infrastructure more vulnerable.                            |   |
|  |  |   |
| Transport - to reduce transport emissions and related  | Moderate – there is no local data on                       | Ensure that the location and distribution of sites  |
| congestion, need to reduce the distances travelled by  | the proportion of overall freight                          | takes into account access and transport issues,   |
| minerals and waste and/or promote alternatives to road   | movements that are made up of                              | including potential air quality and congestion and  |
| where transport is essential. Proposals for improved rail  | minerals/waste but HGV                                     | makes the best possible use of the existing   |
| links for both freight and passenger services may require  | movements are likely to be                                 | network. Ensure adequate supplies of  |
| additional supplies of construction minerals as well as  | significant. Without a proactive                           | construction minerals. Encourage local waste  |
| increase future transport options. Road improvements   | planned approach there is a risk of                        | management schemes and minerals sites close to  |
| along the A46 and possibly the A453 could also improve   | increased congestion and worsened                          | markets wherever possible and promote   |
| east-west travel across the county. Planned new  | air pollution in sensitive areas such                      | alternatives to road transport such as rail or water  |
| housing and employment development in the growth   | as AQMAs. Construction minerals                            | or even pipeline where viable.  |
| areas are likely to affect network capacity. Making the  | are also essential supplies for new                        |   |
| best use of our existing transport network is a priority.  | transport infrastructure.                                  |   |
| Minerals – Nottinghamshire is a major producer of  | <b>High</b> – serious risk to supplies of                  | Long term planning and monitoring of reserves will  |
| minerals, especially sand and gravel, but historic   | raw materials if adequate reserves                         | ensure that an adequate and steady supply of  |
| production levels have fallen dramatically during the  | of construction, industrial and                            | minerals is secured and provide certainty to the  |
| recession. Current working areas for sand and gravel in  | energy minerals are not planned                            | industry, landowners and local communities. It will   |
| the Idle Valley are almost exhausted and replacement   | and maintained. The lack of                                | ensure that future mineral working takes place in   |
| reserves are needed to maintain an appropriate land  | certainty may discourage the long                          | the most appropriate locations, take account of environmental, social and economic concerns and |
| bank. Future clay reserves for county's 2 brickworks also need to be secured as these are well below the | term investment required and,<br>without a proper planning | enable development to be phased in order to   |
| recommended level. Reserves of silica sand are also  | framework, development is more                             | minimise impacts and prioritise the most suitable   |
| very low. Mineral working can have significant   | likely to adversely affect local                           | sites.  |
| environmental impacts but there are also linked  | communities and environmentally                            | 51105.  |
| opportunities for environmental improvements as part of  | sensitive areas. Opportunities to                          |   |
| mitigation and restoration arrangements.   | secure environmental improvements                          |   |
|  | would also be lost.  |   |
| Waste – arisings have fluctuated over time but previous  | <b>High</b> – serious risk of pollution from               | The plan cannot directly influence the amount of  |
| significant growth has given way to more recent  | leachate, gas and emissions to air.                        | waste produced although it can help to promote the  |
| reductions. It is not clear whether this reflects changing   | Uncontrolled development could                             | general need to prevent and re-use waste where  |
| behaviour, and better resource management, or is due   | have unacceptable impacts on the                           | possible. The key role of plan is to provide  |
| to the impacts of the recession. Current estimates   | environment and quality of life if it is                   | adequate management capacity for the waste that   |
| forecast moderate future growth as the economy   | in an unsuitable location. Without                         | is produced and to encourage recycling, recovery  |
|  |  |   |

| Sustainability Issue Identified   | Significance to Plan   | How can the plan influence this issue?  |
|---|--|---|
| recovers. To manage waste more sustainably we need<br>to move up the waste hierarchy away from landfill, meet<br>national recycling targets, and enable communities to<br>manage their own waste as far as possible. Significant<br>progress has been made with recycling for all waste<br>types and current municipal recycling targets should be<br>met although there are wide variations between districts.<br>National figures also suggest an increase in recycling<br>commercial and industrial waste. Additional recycling<br>capacity for all wastes would be required if we are to<br>increase recycling above current targets. Disposal<br>capacity across the county is very limited and unlikely to<br>meet future needs unless there is significant change.<br>Energy recovery capacity may increase in future if a<br>proposed incinerator near Mansfield is approved and if<br>the agreed extension to Nottingham's incinerator goes<br>ahead. Most waste types are a potential pollution risk<br>therefore waste needs to be managed safely without<br>harm to either human health or the environment. | adequate planned provision of<br>waste management facilities we<br>would be unlikely to meet national<br>recycling and recovery targets and<br>could face EU fines. A lack of<br>planning certainty may also<br>discourage the long term investment<br>required to deliver necessary<br>facilities.  | and finally disposal in that order. The plan cannot<br>enforce recycling targets on its own but it can<br>create a positive framework in which to encourage<br>new recycling facilities to meet these targets.<br>Where this meets with the waste hierarchy, it can<br>also be used to encourage energy recovery to help<br>avoid disposal. By giving spatial guidance on the<br>likely acceptability of locations for future waste<br>management as well as clear development criteria<br>on the types of sites considered suitable, this<br>should provide the necessary investment certainly<br>to aid the delivery of new waste management<br>infrastructure. It can also ensure that all<br>development takes place in the most suitable<br>locations to minimise environmental impacts. This<br>could include promoting local facilities to help<br>communities manage their own waste. |
| Landscape and countryside/ townscape – the<br>emphasis on landscape character means that it is the<br>features that make up a 'sense of place' that are<br>important rather than trying to value one area above<br>another. This approach is particularly important in<br>Nottinghamshire as there are no officially designated<br>sites of landscape importance. Key landscape features<br>here are the wide, flat river valleys and farmland and the<br>local influence of power stations and sand and gravel<br>extraction along the Trent Floodplain; large, historic<br>market towns such as Newark and Retford with more<br>scattered rural villages settled within the gently rolling<br>Wolds to the south of the county; the concentrated urban<br>development around Nottingham and the impact of<br>major transport corridors such as the M1 and A1, and<br>the industrial development and history of mining across<br>the former coalfield areas to the west of the county.<br>Much of the county's landscape and areas of open   | <b>Moderate/High</b> – mineral workings<br>can be extensive and have<br>significant landscape impacts. Most<br>waste processing operations now<br>take place in an industrial type<br>building which could be intrusive in<br>the wrong location. Landfill sites,<br>often used to restore mineral<br>workings can also be very visible in<br>an open landscape. Without<br>appropriate planning polices there<br>would not be an objective<br>assessment of landscape impacts of<br>proposed development and<br>opportunities to choose less<br>sensitive sites and/or mitigate the<br>visual impact of development might<br>be lost. | Ensure landscape character is taken into<br>account/guide development towards least sensitive<br>areas or ensure schemes are sensitive to important<br>landscape features and character. Promote<br>opportunities for landscape improvements.<br>Require screening and site design, building<br>materials, colours etc. to minimise impacts on<br>neighbouring land and buildings.  |

| Sustainability Issue Identified  | Significance to Plan | How can the plan influence this issue? |
|--|----------------------|--|
| space are under pressure from the impacts of intensive<br>agriculture, future mineral working and possible changes<br>to our climate which could alter the appearance of our<br>landscape. Urban fringes face significant pressure for<br>housing development to meet future targets and the<br>Green Belt around Nottingham, in particular, faces<br>strong demand for urban expansion. Minerals<br>development, in particular, can provide opportunities for<br>landscape enhancement during restoration but this must<br>reflect local character. |                      |  |

# 6. Developing our sustainability objectives (the SA Framework)

#### Introduction

- 6.1 Another key function of the scooping report is to establish the sustainability objectives that will be used to appraise the policies and proposals of the Minerals and Waste documents. These are the objectives that will provide the framework for the Sustainability Appraisal (i.e. the means to test the plan). Government guidance indicates that the most appropriate starting point is the UK Sustainable Development Guide. However it is also important that these objectives are relevant to minerals and waste planning and that they are realistic and measurable. Whereas the broader District or Borough Council Local Development Frameworks will cover a wide range of issues including retail, employment, regeneration and social inclusion, it is expected that our minerals and waste policy documents will have less of an impact on these types of issues. Not all of the objectives set out in the national guidance are therefore considered relevant to the minerals core strategy. For example housing and education targets, and social capital are thought unlikely to be affected by, or have any impact on minerals or waste policy. However it is important to ensure that our minerals and waste policies and proposals do not conflict with these wider aims, and that they contribute to them wherever possible. Where relevant, possible links to wider social and economic objectives such as public health and employment have been drawn out in the following sections but your views on the relevance of this approach are particularly welcome.
- 6.2 The individual objectives are shown in Table 3 below. Table 4 which follows has been used to establish the relevant decision making criteria and possible indicators which will be used to assess how well our emerging policies and proposals meet these objectives and to monitor future performance. Table 5 considers the relationship between the SA objectives and the SA themes whilst Table 6 is then used to test the compatibility of these objectives with each other. Finally, in this section, Table 7 shows how the specific requirements of the SEA Directive have been met within this Scoping Report.

## Table 3: Proposed sustainability objectives

#### SA Objectives

1. Ensure that adequate provision is made to meet local and national mineral demand and to provide a network of suitable waste management sites for the safe treatment and disposal of waste.

2. Protect and enhance biodiversity at all levels and safeguard features of geological interest.

3. Promote sustainable patterns of movement and the use of more sustainable modes of transport.

4. Protect the quality of the historic environment above and below ground.

5. Protect and enhance the quality and character of our townscape and landscape.

6. Minimise impact and risk of flooding.

7. Minimise any possible impacts on and increase adaptability to climate change.

8. Protection of high quality agricultural land and soil.

9. Promote more efficient use of land and resources

10. Promote energy efficiency and maximise renewable energy opportunities from new or existing development.

11. Protect and improve local air quality.

12. Protect and improve water quality and promote efficient use of water.

13. Support wider economic development and promote local job opportunities.

14. Protect and improve human health and quality of life.

# Table 4: Proposed SA Objectives, decision making criteria and proposed indicators

| Objective   | Decision making criteria   | Proposed Indicators   |
|---|--|---|
| 1. Ensure that adequate<br>provision is made to meet local<br>and national mineral demand<br>and to provide a network of<br>suitable waste management<br>sites for the safe treatment and<br>disposal of waste. | <ul> <li>Will the plan/proposal provide waste treatment/disposal sites close to where the waste is produced?</li> <li>Will it reduce the distance waste is transported?</li> <li>Will it reduce the cost of municipal waste treatment/disposal?</li> <li>Will it help to reduce fly-tipping?</li> <li>Will the plan identify adequate resources to meet local and national requirements over the plan period?</li> <li>Will the plan identify suitable areas of land to serve current/future markets?</li> </ul> | <ul> <li>Annual waste arisings</li> <li>Estimated permitted treatment and disposal capacity</li> <li>Average distance municipal waste is transported for treatment/disposal (figures for other waste streams unlikely to be available)</li> <li>Number of 'bring sites' per 100,000 population.</li> <li>Cost per tonne of municipal waste treatment/disposal</li> <li>Number of fly-tipping incidents</li> <li>Annual production figures (where available)</li> <li>Annual apportionment level (where applicable)</li> <li>Level of permitted reserves</li> <li>Land bank requirement</li> </ul> |
| 2. Protect and enhance<br>biodiversity at all levels and<br>safeguard features of geological<br>interest.   | <ul> <li>Will the plan/proposal have an adverse affect on internationally, nationally or locally important sites or legally protected species?</li> <li>Will it affect habitats or species identified within the Nottinghamshire Local Biodiversity Action Plan (LBAP)?</li> <li>Will it restore or create new habitat in line with LBAP priorities?</li> </ul>  | <ul> <li>Area of UKBAP and LBAP habitats created as part of minerals/waste development</li> <li>Area of designated sites lost to minerals/waste development mineral extraction.</li> <li>Number of developments judged to have a harmful</li> </ul>   |

| Objective  | Decision making criteria  | Proposed Indicators  |
|--|---|--|
|  | •Will it support the retention/enhancement of the county's green infrastructure?  | <ul> <li>impact on legally protected species/habitats or those listed in the LBAP.</li> <li>Area of UKBAP and LBAP habitat lost to minerals/waste development.</li> </ul>  |
| 3. Promote sustainable patterns<br>of movement and the use of<br>more sustainable modes of<br>transport. | <ul> <li>Will the plan/proposal reduce overall transport distances for minerals/waste?</li> <li>Will it reduce road haulage of minerals/waste?</li> <li>Will it promote alternative forms of transport?</li> <li>Will it reduce/increase road congestion?</li> <li>Will it result in sites that are well related to the main highway network?</li> <li>Will it require new transport infrastructure to be developed?</li> </ul> | <ul> <li>Number of permitted sites that would result in less haulage of minerals/waste.</li> <li>Number of permitted sites that use alternative means of transport other than road.</li> <li>Number of permitted sites judged to reduce/increase HGV numbers.</li> <li>Average distance travelled by minerals/waste (no local data currently available)</li> <li>Number of permitted sites requiring new access/road improvements</li> </ul> |
| 4. Protect the quality of the historic environment above and below ground.                               | <ul> <li>Will the plan/proposal have an adverse impact upon heritage assets and/or their setting, including archaeological remains and historic buildings?</li> <li>Will it enhance or increase our understanding of the historic environment?</li> </ul>   | <ul> <li>Number of archaeological sites lost or damaged.</li> <li>Number of designated heritage assets (including conservation areas, listed buildings, SAMs, registered parks and gardens and battlefields) adversely affected by development.</li> <li>Number of developments with watching briefs?</li> </ul>   |
| 5. Protect and enhance the<br>quality and character of our<br>townscape and landscape.                   | •Will the plan/proposal have an adverse impact on local landscape character or areas of important townscape?  | Number of permitted sites judged to have a major<br>overall adverse impact on local landscape<br>character/conservation areas  |

| Objective  | Decision making criteria   | Proposed Indicators  |
|--|--|--|
|  | •Will it have an adverse affect on the openness and visual amenity of the Green Belt?  | Number of permitted sites resulting in<br>landscape/townscape improvements   |
|  | •Will it affect areas of public open space?  | <ul> <li>Area of Green Belt lost to minerals/waste<br/>development</li> </ul>  |
|  | <ul><li>Will it lead to landscape/townscape improvements?</li><li>Will it result in development that is sympathetic to its</li></ul>   | <ul> <li>Area of public open space lost to minerals/waste<br/>development</li> </ul>   |
|  | <ul> <li>surroundings in terms of design, layout and scale?</li> <li>Will it contribute to the availability of local building materials to<br/>enable local distinctiveness to be retained in conservation<br/>projects and reflected in new development?</li> </ul> | <ul> <li>Number of conservation areas adversely affected by<br/>minerals/waste development</li> </ul>                          |
| 6. Minimise impact and risk of flooding.   | <ul> <li>Will the plan/proposal increase the risk of flooding?</li> <li>Will it help to alleviate flood risk or the impact of flooding?</li> </ul>   | <ul> <li>Number of permitted sites with flood alleviation<br/>benefits</li> </ul>  |
|  |  | <ul> <li>Number of sites permitted against EA flood advice</li> <li>Number of permitted sites with flood management</li> </ul> |
|  |  | plans in place   |
| 7. Minimise any possible<br>impacts on and increase<br>adaptability to climate change. | •Will the plan/proposal increase emissions of greenhouse gases from minerals and waste activities?   | •Number of permitted sites that include specific carbon reduction measures.  |
|  | •Will it reduce emissions of greenhouse gases?   | • Estimated output of greenhouse emissions from new mineral/waste sites and related transport.                                 |
|  | •Will it encourage the use of renewable energy sources?  |  |
|  | •Will it help to reduce our vulnerability to the impacts of climate change?  | •Average distance travelled by minerals/waste (no local data currently available)  |
|  | •Will it help to increase the resilience of flora and fauna to climate change?   | •Amount of CO <sup>2</sup> produced per tonne of sand and gravel   |

| Objective   | Decision making criteria  | Proposed Indicators  |
|---|---|--|
|   |   | <ul> <li>Amount of fossil fuel use offset by use of waste for<br/>energy</li> <li>Number of permitted sites that include climate<br/>adaptation measures (e.g. to cope with heat, flood,<br/>storms)</li> </ul>  |
| 8. Protection of high quality agricultural land and soil. | <ul> <li>Will the plan/proposal have an adverse impact on soil quality?</li> <li>Will it lead to the irreversible loss of best and most versatile agricultural land?</li> </ul>   | <ul> <li>No of developments permitted which will have an adverse impact on soil quality</li> <li>No of sites with soil management plans. (where available)</li> <li>Area of best and most versatile land permanently lost to mineral extraction/development.</li> <li>Amount lost as % of total agricultural land area.</li> </ul>   |
| 9. Promote more efficient use of land and resources       | <ul> <li>Will the plan/proposal promote the sustainable use of primary minerals?</li> <li>Will it encourage the use of recycled and secondary aggregates?</li> <li>Will it prevent the sterilisation of important mineral resources?</li> <li>Will it promote sustainable waste management and encourage movement of waste up the waste hierarchy?</li> <li>Will it reduce waste/provide for re-use of waste materials?</li> <li>Will it make use of previous developed land or buildings?</li> </ul> | <ul> <li>Number of new aggregate and other mineral recycling plants permitted.</li> <li>Amount of recycled/secondary aggregates produced.</li> <li>Percentage of recycled and secondary aggregates.</li> <li>Number and capacity of new waste facilities by type</li> <li>No. of buildings re-used as part of minerals/waste development</li> <li>Area of previously developed land used for minerals/waste development</li> </ul> |

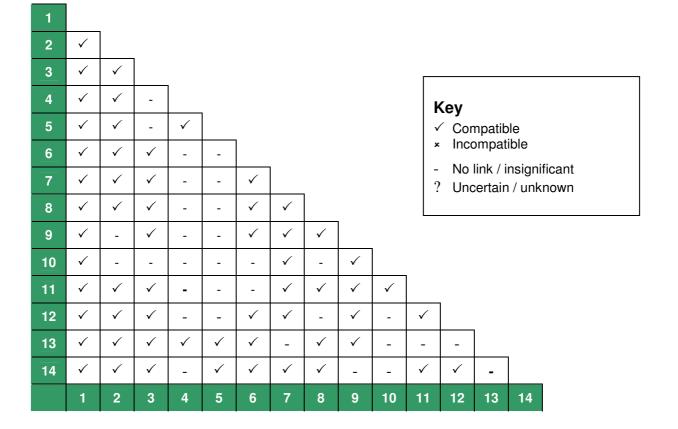

| Objective  | Decision making criteria  | Proposed Indicators  |
|--|---|--|
| <ul> <li>10. Promote energy efficiency<br/>and maximise renewable energy<br/>opportunities from new or<br/>existing development.</li> <li>11. Protect and improve local air</li> </ul> | <ul> <li>Will the plan/proposal minimise energy needs?</li> <li>Will it contribute to renewable/low carbon energy targets?</li> <li>Will it offset the use of fossil fuels?</li> <li>Will the plan/have an adverse impact on local air quality?</li> </ul>                      | <ul> <li>No. of sites permitted that incorporate energy efficiency measures</li> <li>Amount of renewable/low carbon energy produced from minerals/waste sites</li> <li>Number of sites permitted that are judged to have an</li> </ul>   |
| quality.   | •Will it adversely affect a designated Air Quality Management<br>Areas (AQMAs)?   | <ul> <li>adverse impact on air quality</li> <li>Number of sites permitted within AQMAs</li> </ul>  |
| 12. Protect and improve water<br>quality and promote efficient use<br>of water.  | <ul> <li>Will the plan/proposal have an adverse impact upon water quality?</li> <li>Will it increase demand for water?</li> <li>Will it help to improve existing water quality?</li> <li>Will the proposal incorporate sustainable water management and/or drainage?</li> </ul> | <ul> <li>Local surface/groundwater quality (where data exists)</li> <li>No. of sites permitted within groundwater protection zones.</li> <li>Changes in ground water levels.</li> <li>Volume of water abstracted for and discharged from minerals/waste developments</li> <li>No of new/improved water treatment plants permitted</li> <li>No of schemes with Sustainable Urban Drainage</li> <li>No of schemes with rainwater harvesting</li> </ul> |
| 13. Support wider economic development and promote local job opportunities.  | <ul> <li>Will the plan/proposal help to increase training and employment opportunities in Nottinghamshire?</li> <li>Will it help to enable wider economic development?</li> </ul>   | <ul> <li>Data on existing job numbers related to<br/>minerals/waste</li> <li>No. of new jobs created by new mineral/waste sites.</li> </ul>  |

| Objective   | Decision making criteria   | Proposed Indicators   |
|---|--|---|
|   |  | Minerals production by type   |
|   |  | <ul> <li>Waste arisings by type</li> </ul>  |
| 14. Protect and improve human health and quality of life. | <ul> <li>Will the plan/proposal minimise adverse impacts of minerals and waste activity on human health and levels of nuisance including dust, particulate emissions, noise (including traffic noise), vibration, visual amenity and light pollution.</li> <li>Will it promote best practice in the operation and restoration of sites?</li> <li>Will it help to enhance health and wellbeing through the provision of new or improved public open space and access?</li> <li>Will it lead to a loss of public open space/reduction in public access?</li> </ul> | <ul> <li>Amount of public open space/ publicly accessible<br/>land created by minerals/waste development.</li> <li>Number of permissions granted contrary to advice<br/>from health protection agency.</li> <li>Number of properties within 250m of mineral working<br/>proposals.</li> <li>Number of properties affected by noise</li> <li>Number / length of ROW affected by minerals/waste<br/>development</li> <li>No. of confirmed complaints</li> </ul> |

## Testing the plan objectives

# Table 5: Relationship between SA objectives and SA themes

| SA Objective  | SA theme<br>S = Social<br>Ec = Economic<br>Env = Environmental |              |              |
|---|--|--------------|--------------|
|   | S  | Ec           | Env          |

| Cultural heritage including architectural and archaeological heritage | 1, 4, 5, 6, 9,                |
| Landscape   | 3, 5, 7, 9                    |

#### What happens next?

6.3 This Scoping Report will form the basis of the detailed SA of our emerging and future minerals and waste policy documents. We are asking the three statutory consultees – Natural England, English Heritage and the Environment Agency for their views on the suitability of this report and will incorporate their comments into the final version of the Scoping Report. We are also asking for the views of key stakeholders from community/interest groups, the minerals and waste industry and other local authorities.

# Appendix 1: Review of Relevant Plans, Programmes and Policies

#### International & European

| Document  | Key objectives/targets  | Implications for MWDF   | Implications for SA   |
|---|---|---|---|
| Kyoto Agreement on<br>Climate Change 1997   | Cut greenhouse gas emissions (principally<br>methane and CO <sup>2</sup> ) by 8% by 2008 - 2012. UK<br>committed to 20% CO <sup>2</sup> reduction by 2010.  | Minerals processing can be energy intensive<br>which could affect the overall level of<br>greenhouse gas emissions. Transporting<br>minerals or waste is likely to lead to vehicle<br>emissions. Waste treatment and disposal are<br>potential sources of greenhouse gas<br>emissions. In some cases the use of energy<br>from waste technologies may offset the<br>demand for fossil fuels and help to reduce<br>overall $CO_2$ levels. Policies should therefore<br>seek to minimise potential greenhouse gas<br>emissions from minerals and waste<br>development, minimise transport distances,<br>encourage energy efficiency and promote<br>energy recovery measures where this could<br>offset other emissions. | SA objectives need to consider impacts on<br>greenhouse gas emissions including energy<br>consumption and transport impacts   |
| The Johannesburg<br>Declaration on Sustainable<br>Development, 2002                           | Set the framework for a range of global actions<br>to tackle poverty and climate issues leading<br>towards more sustainable development including<br>measures to address unsustainable patterns of<br>consumption and production, protecting and<br>managing the natural resource base; and health<br>and education issues.           | Policies need to take account of social and<br>economic issues, where relevant to minerals<br>and waste, as well as environmental issues,<br>including the protection of natural resources<br>and addressing climate change impacts.  | Include objectives to promote sustainable<br>development, particularly in relation to the<br>consumption of natural resources, protection<br>of the natural environment and health. |
| Aarhus Convention, 1998   | Provides for better public access to information,<br>involvement in decision making and access to<br>justice in relation to environmental matters.  | Ensure a transparent plan-making process and adequate opportunities for community involvement and engagement at all stages.   | Include objective(s) to encourage community involvement and awareness raising.  |
| Convention on Biological<br>Diversity, Rio de Janeiro,<br>1992 - Strategic Plan 2011-<br>2020 | Recognizes that biological diversity is about<br>more than plants, animals and micro organisms<br>and their ecosystems – it is about people and our<br>need for food security, medicines, fresh air and<br>water, shelter, and a clean and healthy<br>environment in which to live. Strategic Goals of<br>the 2011-2020 plan include: | Policies should seek to minimise contribution<br>that minerals and waste development makes<br>to the loss of biodiversity and pressures on it<br>as well ensuring that developments seek to<br>improve biodiversity.  | Include objective on biodiversity including<br>minimising the pressure on it and its loss<br>and seeking to maximise improvements to it<br>and the benefits derived from it.        |

| Document  | Key objectives/targets  | Implications for MWDF  | Implications for SA   |
|---|---|--|---|
|   | <ul> <li>Address underlying causes of biodiversity loss</li> <li>Reduce the direct pressures on biodiversity</li> <li>Improve the status of biodiversity</li> <li>Enhance the benefits to all from biodiversity<br/>and ecosystem services</li> </ul>   |  |   |
| Directive 2008/98/EC on<br>waste (Waste Framework<br>Directive)                                   | Repeals earlier directives from 1975 and 2006.<br>Introduces an amended waste hierarchy of<br>prevention, preparing for re-use, recycling, other<br>recovery, e.g. energy recovery, and disposal.<br>Waste management should not harm human<br>health and the environment; including water, air,<br>soil, plants and animals; not cause nuisance<br>through noise and odour; and should not<br>adversely affect the countryside or places of<br>special interest. Sets re-use and recycling<br>targets for some household wastes (50% by<br>weight) and for non-hazardous construction and<br>demolition waste (70% by weight) by 2020. | Promote the provision of waste management<br>facilities in accordance with the waste<br>hierarchy to support recycling targets. Ensure<br>appropriate protection of natural resources, the<br>environment and health.  | Include objectives on sustainable waste<br>management and to minimise impacts on<br>health and quality of life.               |
| Directive 1999/31/EC on<br>the Landfill of Waste  | Prohibits landfill of certain wastes and co-<br>disposal of inert, non-hazardous and hazardous<br>wastes. Waste must be -treated before disposal.<br>Disposal of biodegradable municipal waste must<br>be progressively reduced to 35% of 1995 levels<br>by 2020. Requires landfill gas recovery, where<br>viable. Looks to prevent or reduce the negative<br>effects on the environment, in particular, air<br>pollution.  | Ensure policy framework promotes appropriate<br>pre-treatment and disposal facilities. Require<br>recovery of landfill gas where viable and that<br>landfill sites are operated so as to minimise<br>potential environmental impacts, especially air<br>pollution.                               | Include objective(s) to minimise the<br>environmental impacts of waste<br>management, especially air pollution.               |
| Directive 2000/76/EC on<br>Incineration of Wastes   | Prevent or limit as far as practicable the negative<br>effects of incineration/co-incineration of waste.<br>Introduced a dioxin emission limit of no more<br>than 1 part in 10 billion.   | Waste development, particularly incineration,<br>could result in dioxin emissions. Although<br>regulation and monitoring of emissions is<br>carried out by the Environment Agency,<br>policies should look to ensure that the location<br>and scale of development will not harm air<br>quality. | Include objective(s) to assess possible air quality impacts.  |
| Directive 2000/53/EC on<br>End of Life Vehicles<br>Directive 002/96/EC on<br>Waste Electrical and | Reduce the amount of waste from End of LifeVehicles (ELVs).ELVs can only be 'treated' atauthorised sites.Encourages reuse, recycling and recovery ofwaste electrical and electronic equipment. Sets   | Policies should encourage the development of appropriate treatment facilities for these wastes.  | Include objectives on sustainable waste<br>management and the provision of<br>appropriate waste management<br>infrastructure. |

| Document  | Key objectives/targets  | Implications for MWDF  | Implications for SA  |
|---|---|--|--|
| Electronic Equipment  | criteria for collection, treatment, recycling and<br>recovery. Includes targets for recycling and<br>recovery of materials and components collected   |  |  |
| Regulation2037/2000 on<br>Ozone Depleting<br>Substances   | Prevents recycling or disposal of refrigeration<br>equipment without prior treatment to remove<br>potentially harmful chemicals.  |  |  |
| Animal By-Products<br>Regulations 2003 (EC<br>1774/2002)  | Controls the disposal of animal by-products<br>including catering and food processing wastes<br>containing meat. Prescribes specific treatment<br>requirements including composting, anaerobic<br>digestion, rendering and incineration |  |  |
| Directive 96/62/EC on<br>Ambient Air Quality<br>Assessment and<br>Management  | Introduces air quality standards for previously unregulated air pollutants  | Although regulation and monitoring of<br>emissions is carried out by the Environment<br>Agency, policies should look to ensure that the<br>location and scale of development will not  | Include objectives to assess possible air quality and health impacts.  |
| EC Directive 2002/3<br>relating to ozone in ambient<br>air  | Sets long term target values for ozone in ambient<br>air and defines thresholds at which there is a<br>threat to human health.  | harm air quality or health.  |  |
| EC Directive 1999/30<br>relating to limit values for<br>Sulphur Dioxide, Oxides of<br>Nitrogen, particulate matter<br>(dust) and Lead in ambient<br>air | Sets limit values for Sulphur Dioxide, Oxides of<br>Nitrogen, Nitrogen Dioxide, particulate matter,<br>and Lead, and defines thresholds at which there<br>is a threat to human health   |  |  |
| EC Directive 2008/1<br>concerning Integrated<br>Pollution, Prevention and<br>Control  | Aims to prevent emissions into air wherever<br>practicable, and where not, minimise them. The<br>Directive is applicable to certain waste<br>management facilities.   |  |  |
| Large Combustion Plant<br>Directive 2001/80/EC  | Sets emissions ceilings for plants above a<br>certain size, regardless of fuel type - this can<br>include biomass which can be made up of<br>vegetable waste.   |  |  |
| Directive 2006/21/EC of the<br>European Parliament of the<br>Council on the<br>Management of Waste from<br>Extractive Industries                        | Looks to prevent or reduce any adverse effects<br>on the air resulting from waste from the<br>extractive industries.  |  |  |
| EC Directive on the<br>Conservation of Wild Birds<br>79/409/EEC 1979  | Sustain populations of wild birds by maintaining<br>appropriate habitat. Provides for the designation<br>of Special Protection Areas (SPAs) as part of the<br>European 'Natura 2000' network.   | Minerals and waste development could lead to<br>a loss of habitat and other disturbance to birds.<br>Natural England is considering whether part of<br>Nottinghamshire meets the criteria to be<br>considered as a potential SPA which may | The SA will need to take into account the<br>conservation status of areas within the<br>county and seek to identify measures to<br>further maintain and restore natural habitats.<br>Include objective(s) to protect important |

| Document   | Key objectives/targets  | Implications for MWDF  | Implications for SA  |
|--|---|--|--|
|  |   | have implications for the location and type of development that is appropriate.  | wildlife species and habitats and identify opportunities for enhancement.                            |
| EC Directive on the<br>Conservation of Natural<br>Habitats of Wild Flora and<br>Fauna 92/43/EEC 1992 | Maintain and restore natural habitats and the<br>populations of species of wild flora and fauna.<br>Implement measures to conserve threatened<br>species and to ensure and promote the<br>maintenance of biodiversity. Provides for the<br>designation for Special Areas of Conservation<br>(SACs) as part of the 'Natura 2000' network.  | Minerals and waste development could lead to<br>a loss of habitat and other disturbance to<br>wildlife. Restoration and mitigation could<br>provide opportunities for new habitat. Policies<br>should protect and enhance habitats and<br>wildlife.  |  |
| European Landscape<br>Convention, 2004   | Promotes the protection, management and<br>planning of European landscapes, both<br>outstanding and ordinary. The Convention aims<br>to protect, manage, improve or create<br>landscapes, as well as encouraging European<br>cooperation in landscapes.   | Minerals and waste development could have a significant visual impact but there may also be opportunities for landscape enhancement during restoration at some sites. Policies should seek to minimise landscape impacts and enhance where possible.   | Include objective(s) to minimise the visual<br>impact and identify opportunities for<br>enhancement. |
| Water Framework Directive<br>2000/60/EC  | Seeks long-term protection of the water<br>environment and improvements to ground and<br>surface water quality – and associated wetlands.<br>Requires nearly all inland and costal waters to<br>achieve 'good' status by 2015. Promotes the<br>sustainable use of water. Reduce water pollution<br>and lessen the effects of floods and droughts.<br>Introduced a co-ordinated approach to water<br>management based on the concept of river basin<br>planning. | Minerals and waste development has the<br>potential to affect water quality and/or increase<br>flood risk. Policies should seek to protect<br>surface and groundwater resources and<br>minimise any contribution to flood risk.  | Include objectives to minimise impacts on water quality and minimise flood risk.                     |
| Urban Waste Water<br>Treatment Directive<br>(91/271/EEC)   | Requires the provision of specified levels of treatment depending on the scale of discharge and environmental sensitivity.  | Policies should allow the development of appropriate treatment facilities.   | Include objective(s) to maintain and improve water quality.  |
| European Air Quality<br>Directive 2008/50/EC   | Protect human health and the environment as a whole. Combat emissions of pollutants at source and identify and implement the most effective emission reduction measures at all levels. Air quality status should be maintained where it is already good, or improved. Minimise the risk to vegetation and natural ecosystems away from urban areas. There should be a general reduction of concentrations of fine particulate matter (PM2,5).                   | Although regulation and monitoring of<br>emissions is carried out by the Environment<br>Agency, policies should look to ensure that the<br>location, scale and operation of minerals or<br>waste developments will not harm air quality or<br>pose a risk to vegetation and natural<br>ecosystems. | Include objective(s) to minimise impacts on air quality and the natural environment.                 |
| EU Directive on the<br>management of waste from<br>extractive industries<br>2006/21/EC               | Mineral operators should take all necessary<br>measures to prevent or reduce as far as possible<br>any negative effects, actual or potential, on the<br>environment or on human health which are  | Policies should ensure that impacts on the environment and human health are minimised.   | Include objectives to minimise impacts on the environment and human health.                          |

| Document   | Key objectives/targets   | Implications for MWDF   | Implications for SA  |
|--|--|---|--|
|  | brought about as a result of the management of waste from the extractive industries.   |   |  |
| European Sustainable<br>Development Strategy 2001  | Limit climate change and increase the use of<br>clean energy.<br>Manage natural resources more responsibly.<br>Improve the transport system and land use<br>management.  | Policies should ensure that potential climate<br>impacts are minimised and promote the<br>sustainable use of minerals and the<br>management of waste as a resource.<br>Development should be located as sustainably<br>as possible in terms of transport and land use.  | Include objectives to limit climate change<br>impacts, ensure the sustainable use of<br>natural resources, land and transport<br>infrastructure. |
| European Convention on<br>the Protection of<br>Archaeological Heritage<br>(Revised) 1992 | Main provisions already enshrined in UK policy<br>through Planning Policy Statement 5. Provides<br>for identification and protection of archaeological<br>heritage, integrated conservation and control and<br>recording of excavations. Sets wider definition of<br>the historic environment to include the overall<br>setting and not just the buildings or monuments. | Minerals and waste development has the<br>potential to affect heritage assets above or<br>below ground. Mineral working, especially,<br>has the potential to affect the important<br>archaeology found along the Trent Valley.<br>Policies should ensure that historically<br>important features and their settings are<br>protected from inappropriate development and<br>that there is an adequate system of mitigation<br>and recording. | Include objective(s) to minimise impacts on the historic environment.  |
| The Venice Charter 1964  | Sets out an international code of practice for the preservation and restoration of historic monuments.   | Minerals and waste development could affect<br>historic monuments or their settings. Policies<br>should seek to minimise the impacts of<br>development through sensitive location and<br>design.  | Include objective(s) to protect cultural heritage including historic monuments.  |

#### National

| Document                              | Key objectives/targets  | Implications for MWDF   | Implications for SA  |
|---------------------------------------|---|---|--|
| Environmental Protection<br>Act, 1990 | Allows standards to be set limiting the<br>concentrations of substances released into the<br>environment and gives regulatory powers to the<br>Environment Agency as the waste regulation<br>authority. | Planning policies are separate to the<br>environmental permitting process and should<br>not seek to duplicate controls with other<br>regulatory processes. This allows for the<br>streamlining of 'development management'<br>policies. | Include general objectives to minimise the impacts of development on water, soil and air quality and seek EA advice in specific cases. |
| Pollution Prevention an               | d Aims to prevent or control harmful emissions and  | Specific pollution control limits are set and   | Include objectives to minimise impacts on  |

| Document   | Key objectives/targets  | Implications for MWDF  | Implications for SA   |
|--|---|--|---|
| Control Act, 1999  | implements EU requirements on environmental permitting.   | monitored by the Environment Agency not<br>planning policies. Likely harm may be a<br>material planning consideration in decision<br>making and policies will need to ensure that<br>the location, type, design and operation of<br>development will not result in harmful impacts.  | water, soil and air quality.  |
| Climate Change and<br>Sustainable Energy Act,<br>2006<br>Climate Change Act 2008 | Aims to enhance the UK contribution to limiting<br>climate change and secure 'a diverse and viable<br>long term energy supply'.<br>Encourage renewable energy production and<br>invest in carbon reduction technologies. Reduce<br>the amount of carbon produced by vehicular<br>transport. Sets legal targets for UK to reduce<br>carbon dioxide emissions by at least 80 per cent<br>by 2050, and 26% by 2020. Allows local<br>authorities to pilot waste reduction schemes with<br>financial incentives. | Plan policies should ensure that the impact on<br>climate change from minerals and waste<br>development is minimised. Aim to reduce the<br>need for vehicular transport of minerals and<br>waste where possible. Consider opportunities<br>to generate energy from waste where this<br>doesn't conflict with other goals and promote<br>more energy efficient development. | Include objectives on climate change,<br>energy efficiency and sustainable transport.   |
| Air Quality (England)<br>Regulations 2000  | Local Authorities must designate Air Quality<br>Management Areas where there is a risk that<br>pollution limits might be exceeded.  | Policies should consider the possible air<br>quality impacts of minerals and waste<br>development arising from dust and<br>particulates, vehicle movements and direct<br>emissions from waste treatment and disposal.<br>Ensure that direct or cumulative effects of<br>development do not have a harmful impact on<br>designated Air Quality Management Areas.            | Include objective(s) on air quality.  |
| Urban Waste Water<br>Treatment (England and<br>Wales) Regulations 1994           | Transposes requirements of Urban Waste Water<br>Treatment Directive into UK law   | Policies should allow the development of appropriate treatment facilities.   | Include objective(s) on water quality.  |
| Landfill (England and<br>Wales) Regulations 2002                                 | Implements the Landfill Directive in the UK   | Policies should promote appropriate pre-<br>treatment and disposal facilities, require<br>recovery of landfill gas where viable and<br>ensure that landfill sites are operated so as to<br>minimise potential environmental impacts,<br>especially air pollution.  | Include objective(s) to minimise the<br>environmental impacts of waste<br>management, especially air pollution.   |
| The Hazardous Waste<br>(England and Wales)<br>Regulations 2005                   | Widens the types of waste that are now classed<br>as hazardous and strengthens controls on the<br>management and disposal of hazardous waste.   | The Waste Core Strategy will need to consider<br>whether there is a need for additional<br>hazardous waste treatment or disposal<br>facilities within Nottinghamshire.   | Include objectives on environmental<br>protection and protecting human health as<br>well as ensuring the provision of appropriate<br>waste management infrastructure. |
| Animal By-Products<br>Regulations 2003   | Enacts corresponding EU regulations in the UK   | Wastes which contain animal by-products such<br>as kitchen and catering waste can only be<br>treated by 'in-vessel' composting or anaerobic<br>digestion. The Waste Core Strategy will   | Include objectives on environmental<br>protection and protecting human health as<br>well as ensuring the provision of appropriate<br>waste management infrastructure  |

| Document   | Key objectives/targets   | Implications for MWDF   | Implications for SA   |
|--|--|---|---|
|  |  | therefore need to consider whether additional facilities are needed to enable the safe treatment of these wastes.   |   |
| Waste Management<br>(England and Wales)<br>Regulations 2005  | Brought agricultural waste within the controls<br>already in place through the Waste Framework<br>Directive.   | Need to consider the need for additional<br>treatment or disposal facilities to serve rural<br>areas depending on the likely volumes and<br>types of waste generated.   | Include objectives(s) on sustainable waste<br>management and the provision of<br>appropriate waste management<br>infrastructure.                                  |
| Waste (England and Wales) Regulations 2011   | Transposes EU requirement for a national waste<br>management plan and waste prevention<br>measures alongside strict controls over waste<br>collection to promote use of waste as a resource.   | The various waste policy documents will need<br>to reflect the importance of waste as a<br>resource and the need to prevent waste as<br>part of wider goals that go beyond the planning<br>system alone.  | Include objectives(s) on sustainable waste<br>management and the provision of<br>appropriate waste management<br>infrastructure to maximise resource<br>recovery. |
| Wildlife and Countryside<br>Act 1981 (as amended)  | Sets out protection afforded to wild plants and<br>animals in the UK, including SSSIs.   | Minerals and waste development has the<br>potential to harm the natural environment but<br>site restoration schemes may also provide<br>opportunities for enhancement through the<br>creation of new habitat. Policies should<br>therefore seek to protect internationally,<br>nationally and locally designated sites<br>(including nationally designated SSSIs) and<br>species and legally protected species, as well<br>as recognising the importance of wider nature<br>conservation and countryside interests. | Include objective(s) to minimise impacts on the natural environment   |
| Natural Environment and<br>Rural Communities Act<br>2006   | Confers powers to a number of bodies; Natural<br>England for the management (and other<br>associated tasks) of the natural environment, the<br>Commission for Rural Communities for the<br>promotion (and other) of rural communities<br>needs and sustainable development and the<br>Inland Waterways Advisory Council.   | Minerals and waste development could impact<br>adversely on rural areas and communities in<br>terms of landscape, quality of life and habitat.<br>Site restoration and employment opportunities<br>could also bring a positive impact in terms of<br>new habitat and job creation.  | Include objective(s) to minimise impacts on<br>landscape, natural environment and quality<br>of life.   |
| Countryside and Rights of<br>Way Act 2000<br>Conservation of Habitats<br>and Species Regulations<br>2010 | Sets out legal provisions relating to rights of way<br>and promotes conservation of habitats and<br>species, and applies further protection to SSSIs<br>Consolidates the earlier 1994 regulations and is<br>now the principal means by which the Habitats<br>Directive is transposed in England and Wales .<br>Provides a strict regime of protection for certain<br>'European protected species'. | Minerals and waste development could lead to<br>a loss of habitat and other disturbance to<br>wildlife. Restoration and mitigation could<br>provide opportunities for new habitat. Policies<br>should protect and enhance habitats and<br>wildlife. Policies should protect internationally<br>designated sites and an appropriate<br>assessment of plans or projects affecting<br>these sites must be completed. Policies should<br>also seek to protect European protected<br>species.                            | Include objective(s) to minimise impacts on<br>the natural environment  |
| Ancient Monuments and  | Sets out the protection and procedures relating  | Policies should seek to minimise the impact of  | Include objective(s) to minimise impacts on   |

| Document  | Key objectives/targets  | Implications for MWDF  | Implications for SA   |
|---|---|--|---|
| Archaeological<br>Areas Act 1979  | to Scheduled Ancient Monuments.   | minerals and waste development on<br>Scheduled Ancient Monuments by avoiding<br>harm wherever possible and seeking<br>appropriate mitigation and preservation where<br>impacts cannot be avoided.  | cultural heritage including Scheduled<br>Ancient Monuments.   |
| Planning (Listed Buildings<br>and Conservation Areas)<br>Act 1990   | Sets out statutory protection and procedures relating to Listed Buildings and Conservation Areas.   | Policies should seek to minimise the impact of<br>minerals and waste development on Listed<br>Buildings and Conservation Areas by avoiding<br>harm wherever possible and seeking<br>appropriate mitigation and preservation where<br>impacts cannot be avoided.  | Include objective(s) to minimise impacts on<br>cultural heritage including Listed Buildings<br>and Conservation Areas.  |
| 'Heritage Protection for the<br>21st Century' 2007<br>Heritage White Paper  | Aims to develop a unified approach to the<br>historic environment; maximise opportunities for<br>inclusion and involvement; and supporting<br>sustainable communities by putting the historic<br>environment at the heart of an effective planning<br>system.   | Policies should seek to minimise the impact of<br>minerals and waste development on the<br>historic environment by avoiding harm<br>wherever possible and seeking appropriate<br>mitigation and preservation where impacts<br>cannot be avoided.   | Include objective(s) to minimise impacts on cultural heritage/the historic environment.   |
| 'Securing the Future' The<br>UK Government<br>Sustainable<br>Development Strategy 2005                                  | Sets out key themes for sustainable<br>development including climate change, natural<br>resource protection and sustainable consumption<br>and production. Key objectives are living within<br>environmental limits; ensuring a strong, healthy<br>and just society; achieving a sustainable<br>economy; using sound science responsibly; and<br>promoting good governance. | Policies should promote sustainable<br>development and the protection of natural<br>resources and quality of life. Ensure<br>appropriate opportunities for community<br>consultation and engagement throughout the<br>plan making process.   | Include objectives on climate change,<br>environmental protection and natural<br>resources, biodiversity, health, energy,<br>sustainable transport, economic growth and<br>community involvement. |
| UK Climate Change<br>Programme, 2006, DEFRA   | Reduce man-made emissions (i.e. greenhouse<br>gases); encourage the production of renewable<br>energy and invest in carbon reduction<br>technologies. Reduce carbon from various<br>sources including vehicular transport and<br>business.  | Plan policies should ensure that the impact on<br>climate change from minerals and waste<br>development is minimised. Aim to reduce the<br>need for vehicular transport of minerals and<br>waste where possible. Consider opportunities<br>to generate energy from waste where this<br>doesn't conflict with other goals and promote<br>more energy efficient development.                                     | Include objectives to minimise climate<br>impacts, consider energy use and limit the<br>climate impacts of transporting minerals and<br>waste.  |
| 'Our Energy Future -<br>Creating a Low Carbon<br>Economy' 2003 Energy<br>White Paper, (DTI)<br>Air Quality Strategy for | Sets out policies for reducing CO <sup>2</sup> from the use<br>of energy, including transport. Seeks 60% cut in<br>UK dioxide emissions by 2050. Sets targets for<br>renewable generation of 10% by 2010 and 20%<br>by 2020.  | Policies should seek to minimise impacts on<br>air quality including minimising the distance<br>minerals and waste is transported and<br>encouraging alternative forms of transport<br>other than road. Consider opportunities to<br>generate energy from waste where this doesn't<br>conflict with other goals and promote more<br>energy efficient development.<br>Mineral development tends to be rural and | Include objectives on air quality, energy<br>efficiency and sustainable transport.<br>Include objective(s) to minimise impacts on   |

| Document  | Key objectives/targets   | Implications for MWDF   | Implications for SA   |
|---|--|---|---|
| England, Scotland, Wales<br>and Northern Ireland, July<br>2007, (DEFRA)                                 | pollutants. The predominant source for most of<br>these pollutants is road traffic. Also includes<br>objectives to protect vegetation and ecosystems.  | away from the areas worst affected by poor air<br>quality. However dust is a possible issue from<br>mineral sites. Waste developments in or<br>around urban areas are more likely to have a<br>possible impact through dust or emissions.<br>However the transportation of both minerals<br>and waste could also contribute to wider air<br>quality issues. Although emissions are<br>regulated and monitored by the Environment<br>Agency, development should be located and<br>operated so as to minimise transport<br>distances, and avoid harmful emissions to air. | air quality impacts.  |
| Air Pollution: Action in a<br>Changing Climate, March<br>2010, (DEFRA)                                  | Highlights health benefits of closer integration of air quality and climate change policies in the future.   | Ensure air quality and climate change issues are considered in an integrated manner.  | Include objectives on air quality, climate and health.  |
| The Future of Transport<br>White Paper: A Network for<br>2030 Department for<br>Transport 2004          | Promotes more effective use of our transport<br>network and aims to minimise the environmental<br>and health effects of transport. Seeks a modal<br>shift in freight transport away from roads towards<br>rail, sea and inland waterways.  | The majority of minerals and waste are<br>transported by road within Nottinghamshire.<br>Policies should seek to minimise the impacts<br>of this by reducing the distances travelled and<br>encouraging alternatives such as rail, water or<br>pipeline where opportunities exist.  | Include objectives on sustainable transport<br>and making use of existing infrastructure to<br>minimise additional impacts. |
| Circular 1/2003<br>Safeguarding, Aerodromes,<br>Technical Sites and Military<br>Explosive Storage Areas | Highlights the potential risk to aircraft from tall<br>structures and birds. The circular is linked to<br>safeguarding maps for certain specified airfields<br>(civil/military) and consultation is required for<br>proposals within the notified safeguarding areas.  | Open water areas created from the restoration<br>of minerals sites and operational non-<br>hazardous landfills are the key concerns for<br>attracting flocks of birds. Plan policies need to<br>ensure impacts are considered in the location<br>and design of sites and restoration schemes.   | Ensure risk of bird strike is considered as part of the assessment of potential environmental impacts.                      |
| UK Biodiversity Action Plan,<br>1994 (reviewed 2007)  | A detailed action planning process targeting<br>conservation action to priority habitats and<br>species. Comprises Species Action Plans and<br>Habitat Action Plans aimed at protecting the<br>priority species and habitats identified. Local<br>Action Plans are usually developed at a county<br>level to identify local priorities and to determine<br>the contribution they can make to the delivery of<br>the national Species and Habitat Action Plan<br>targets. | Seek to minimise possible impacts on priority habitats and species.   | Include objective(s) to minimise impacts on biodiversity.   |
| Working with the Grain of<br>Nature: a Biodiversity<br>Strategy for England,<br>DEFRA, 2002             | Aims to deliver the UK Biodiversity Action Plan.<br>Sets out conservation priorities and action plans<br>for a series of habitats and species across the<br>themes of agriculture, water and wetlands,<br>woodland, marine and coastal, and urban areas.   | Policies should reflect the aims of the national<br>biodiversity strategy which are expanded in the<br>Nottinghamshire Local Biodiversity Action Plan   |   |

| Document  | Key objectives/targets  | Implications for MWDF  | Implications for SA   |
|---|---|--|---|
| Green Infrastructure<br>Guidance, 2009, (Natural<br>England)  | Promotes importance of positive and early<br>planning for green infrastructure and integrating<br>green infrastructure strategies within spatial<br>planning.   | Ensure policies and proposals reflect the importance of green infrastructure assets.   | Ensure that the appraisal objectives<br>collectively cover the assets that make up<br>our area's green infrastructure |
| Landscape Character<br>Assessment – Guidance for<br>England and Scotland,<br>Countryside Agency 2002      | Sets out the recommended approach and<br>encourages Local Authorities to undertake<br>character assessments of theirs areas. It is<br>intended as a tool to aid informed decision<br>making.  | Ensure policies and proposals take account of<br>Nottinghamshire Landscape Character<br>Assessments (see local level entry).   | Include objective(s) to minimise the impact<br>of development on landscape quality                                    |
| National Character Areas<br>Map, Natural England 2005   | Landscape character is defined as what makes<br>an area unique by virtue of its natural features<br>(landform, geology etc.) and human influences<br>(e.g. settlement patterns, forestry and farming).<br>The approach looks at what makes one<br>landscape different from another, rather than<br>better or worse.   |  |   |
| Safeguarding our Soils – A<br>Strategy for England, 2009,<br>DEFRA  | Sets out an ambitious vision to improve the<br>sustainable management of soil and tackle<br>degradation within 20 years. The sustainable use<br>of agricultural soils; the role of soils in mitigating<br>and adapting to climate change; protecting soil<br>functions during construction and development;<br>and preventing pollution and dealing with historic<br>contamination.   | Plan policies should help to protect soil quality<br>and ensure proper handling of soils during<br>development and restoration.  | Include objective(s) to protect soil quality  |
| Future Water – The<br>Government's Water<br>Strategy for England, 2008,<br>DEFRA                          | Defines the Government's strategic vision for the direction of water policy to 2030 including improvements in water quality standards, supply and infrastructure resilience to withstand the impacts of climate change.   | Policies should provide for adequate new<br>waste water treatment infrastructure and<br>ensure that other waste development<br>minimises potential impacts on water quality. | Include objectives to provide suitable waste<br>water treatment facilities and minimise<br>impacts on water quality.  |
| National Flood and Coastal<br>Erosion Risk Management<br>Strategy for England,<br>Environment Agency 2011 | Sets out what all responsible authorities need to<br>do to reduce the risk of flooding and coastal<br>erosion and manage its consequences. Once<br>approved it will be a statutory framework.<br>Effective management includes knowledge of<br>where and when they are likely to happen, taking<br>reasonable steps to reduce likelihood,<br>forecasting and warning communities and<br>services and adaptation. It also mentions<br>transferring risk to where consequences are low<br>(e.g. letting land to flood). | Policies should recognise flooding and its<br>risks, try to minimise additional impact on<br>flooding and seek to adapt to it.   | Include objectives to reduce any increase in<br>the risk of flooding and to alleviate where<br>possible.              |
| Waste Strategy for England  | transferring risk to where consequences are low (e.g. letting land to flood).   | Policies should encourage the provision of   | Include objectives(s) on sustainable  |

| Document  | Key objectives/targets   | Implications for MWDF  | Implications for SA   |
|---|--|--|---|
| 2007 (DEFRA)  | waste, and manage waste according to waste<br>hierarchy and in ways that protect human health<br>and the environment. Encourages waste<br>prevention and reuse across all sectors including<br>householders, business and industry. Promotes<br>best practice and community initiatives. Waste<br>should be managed (i.e. treated or disposed of)<br>at the nearest appropriate site. Sets a series of<br>legal targets for municipal waste recycling and<br>recovery (including 67% recovery of municipal<br>waste by 2015) and voluntary targets for some<br>other wastes. | new treatment and disposal facilities according<br>to the 'waste hierarchy', to help meet relevant<br>targets, and enable waste to be managed<br>close to source wherever possible.  | management and the provision of<br>appropriate waste management<br>infrastructure.  |
| Site Waste Management<br>Plans Regulations 2008   | These are required for development projects costing more than £300,000 with the aim of ensuring that building materials are managed efficiently, waste is disposed of legally, and material recycling, reuse and recovery is maximised.  | As this is already a legislative requirement<br>there is no need for this to be repeated in<br>policy but supporting text could be used to<br>promote best practice.   | Include objective(s) on sustainable waste management and resource use.  |
| Planning Policy Statement<br>(PPS)1: Delivering<br>Sustainable Development,<br>2005 (ODPM)                                      | Sets out key planning objectives including<br>making suitable development land available in<br>line with economic, social and environmental<br>objectives to improve quality of life; contribute to<br>sustainable development; protect and enhance<br>the natural and historic environment, the quality<br>and character of the countryside; ensure good<br>design and the efficient use of resources and<br>support sustainable communities.   | Plan policies should have regard to all the key<br>principles and objectives of PPS1 and work to<br>ensure the progression of sustainable<br>development.  | Include objectives covering quality of life,<br>use of resources, design and the protection<br>and enhancement of the natural and historic<br>environment and landscape quality.  |
| Planning Policy Statement:<br>Planning and Climate<br>Change – Supplement to<br>Planning Policy Statement<br>(1), December 2007 | Outlines how planning should contribute to<br>stabilising climate change. Aims to ensure<br>reduction of emissions in provision of services,<br>patterns of growth that reduce the need to travel,<br>minimise vulnerability to climate change and<br>select land for potential development considering<br>the likely effects of climate change utilising the<br>'Precautionary Principle', minimise CO <sub>2</sub><br>emissions, and provide for sustainable waste<br>management.  | Ensure plan policies promote reductions in<br>emissions from minerals and waste<br>development, including transport, and ensure<br>new development is located and designed to<br>withstand the likely impacts of climate change<br>such as higher temperatures, drought, flooding<br>and storms. | Include objectives to minimise climate<br>impacts of minerals and waste development<br>and to ensure new development is designed<br>to cope with possible climate change effects. |
| Planning Policy Guidance<br>note2: Green Belts, DoE<br>1995 (Amended 2001)  | Protect the open character of designated Green<br>Belt areas. There is a general presumption<br>against inappropriate development within green   | Minerals development may be acceptable in<br>the Green Belt but this is likely to restrict the<br>type, scale and location of waste treatment  | Include objective(s) to cover landscape and Green Belt issues.  |

| Document   | Key objectives/targets  | Implications for MWDF   | Implications for SA   |
|--|---|---|---|
|  | belt areas. However, minerals can only be<br>worked where they are found and providing that<br>high environmental standards are maintained<br>and sites are well restored, mineral extraction<br>can be compatible with the aims of green belt<br>policy.<br>The planning system should deliver a sufficient  | facilities. Landfill may be an appropriate use<br>when this is used to reclaim a former mineral<br>working. Policies need to protect the open<br>character of the Green Belt whilst recognising<br>the need for appropriate minerals and waste<br>development.<br>The development of additional housing will  | Include objective(s) to ensure adequate   |
| Planning Policy Statement<br>3: Housing, June 2010,<br>CLG   | supply of high quality housing in appropriate locations to meet a variety of needs.   | depend upon the availability of suitable<br>construction materials. Mineral policies will<br>need to ensure an adequate supply of<br>minerals to meet projected needs. At the local<br>level, significant new housing development<br>may also require additional waste<br>management infrastructure.  | minerals and waste management provision.  |
| Planning Policy Statement<br>4: Planning for Sustainable<br>Economic Growth,<br>December 2009, CLG | Planning should help to achieve the<br>Government's overarching objective of<br>sustainable economic growth by building<br>prosperous communities and improving the<br>economic performance of areas, reducing<br>economic disparity between areas, delivering<br>more sustainable patterns of development,<br>reducing the need to travel and responding to<br>climate change. It should also help to raise the<br>quality of life and the environment in rural areas.   | Minerals and waste sites could provide limited<br>employment opportunities but may also be<br>seen as detracting from inward investment if<br>they are not well designed, well run and in<br>appropriate locations. Higher levels of<br>economic growth could lead to greater<br>demand for minerals and increased waste<br>production from commerce and industry<br>Policies should seek to ensure development is<br>in the most appreciate locations and makes<br>the best use of existing infrastructure wherever<br>possible including the transport networks and<br>the re-use of land buildings where feasible. | Include objective(s) on sustainable waste<br>management, ensuring an adequate supply<br>of minerals resources, land use, good<br>design and supporting wider economic<br>development. |
| Planning Policy Statement<br>5: Planning for the Historic<br>Environment, 2010, CLG                | Heritage assets are a non-renewable resource<br>and there should be a presumption in favour of<br>the conservation of designated heritage assets<br>based on their level of significance. Decisions<br>affecting all heritage assets (whether designated<br>or not) should take account of the wider social,<br>cultural, economic and environmental benefits of<br>heritage conservation. Intelligently managed<br>change may sometimes be necessary but<br>evidence of any assets to be lost should be<br>recorded. | Plan policies should seek to protect and<br>conserve the historic environment from the<br>impact of minerals and waste development;<br>recognise the value of 'sense of place' and<br>take account of wider social, cultural,<br>economic and environmental issues. This<br>should include provision for preservation<br>and/or recording and appropriate mitigation as<br>necessary.   | Include objective(s) to minimise impacts on the historic environment.   |
| Planning Policy Statement<br>7: Sustainable development<br>in rural areas 2004, ODPM               | Protect areas of national landscape importance<br>from adverse development. Conserve and<br>enhance wider landscape character and quality.  | Minerals and waste development has the potential to affect rural areas, particularly in terms of landscape impacts. However   | Include objectives to help protect the rural quality of life and landscape and support the rural economy.   |

| Document   | Key objectives/targets  | Implications for MWDF   | Implications for SA  |
|--|---|---|--|
| (now partly replaced by PPS4)  | Improve rural quality of life, discourage<br>development of Greenfield land, and enhance<br>the rural economy by increasing employment,<br>competition and enterprise. Protect best and<br>most versatile agricultural land. Where<br>development is unavoidable, this should be on<br>poorer quality land unless that would harm other<br>sustainability interests. Promote sustainable<br>economic growth and diversification, protect<br>open countryside, discourage development on<br>'greenfield' sites. Establish landscape character<br>assessment in development planning and<br>management.   | development could, in some cases, help to<br>increase or diversify local employment<br>opportunities. Policies should seek to protect<br>the rural quality of life and landscape character<br>and contribute to wider economic goals where<br>possible.   |  |
| Planning Policy Statement<br>9: Biodiversity and<br>Geological Conservation,<br>ODPM, August 2005    | Protect and enhance sites according to their<br>relative international, national, local or informal<br>importance. Seek mitigation and/or<br>compensation for unavoidable harm and ensure<br>that any reasonable alternative sites are<br>considered fully. Development provides<br>opportunities for building in beneficial biodiversity<br>or geological features as part of good design  | Policies should seek to minimise the impact of<br>new development on biodiversity and<br>geodiversity and encourage any opportunities<br>for gain. Encourage location of development<br>on alternative sites of lesser value where<br>possible  | Include objective(s) to minimise the impacts<br>of minerals and waste development on<br>wildlife and habitats and identify<br>opportunities for enhancement. |
| Planning Policy Statement<br>10: Planning for<br>Sustainable Waste<br>Management, ODPM, July<br>2005 | Planning should help to deliver sustainable<br>development via the waste hierarchy, recognise<br>waste as waste as a resource and look to<br>disposal as the last option, but one which must<br>be adequately catered for. Provide a framework<br>in which communities take more responsibility for<br>their own waste, and enable sufficient and timely<br>provision of waste management facilities to meet<br>local needs. Help implement the national waste<br>strategy, and supporting targets, and help secure<br>the recovery or disposal of waste without<br>endangering human health or the environment.<br>Enable waste to be disposed of close to source<br>and reflect social and economic needs as well as<br>environmental. Protect green belts but recognise<br>the particular locational needs of some types of<br>waste management facilities. Ensure the design<br>and layout of new development supports<br>sustainable waste management. The planned<br>provision of new capacity and its spatial<br>distribution should be based on | Policies should promote facilities that will help<br>to move away from landfill and increase the<br>recycling and recovery of waste. Also need to<br>ensure there is adequate provision for all<br>waste types and that sites are located close to<br>where the waste is produced wherever<br>possible. The Waste Core Strategy will need<br>to take account of the specific locational<br>guidance in developing its spatial approach<br>and in establishing any criteria based policies<br>which will influence the Site Specific Document<br>and decisions on planning applications. | Include objective(s) on sustainable waste<br>management and the protection of natural<br>resources, amenity and quality of life.                             |

| Document  | Key objectives/targets   | Implications for MWDF   | Implications for SA   |
|---|--|---|---|
| a   | clear policy objectives, robust analysis of<br>available data and information, and an<br>appraisal of options. Annexe E identifies a range<br>of locational criteria to be considered.   |   |   |
| Planning Policy Statement<br>12: Local Spatial Planning,<br>2008, CLG<br>s<br>ir<br>k<br>a<br>s<br>s<br>s<br>s                              | Spatial planning is a process of place shaping<br>and delivery which aims to produce a vision for<br>the future of places that responds to local<br>challenges and opportunities and helps to meet<br>community objectives and provide sustainable<br>social, economic and environmental<br>infrastructure. This includes identifying suitable<br>locations for development whilst maintaining an<br>appropriate level of protection to designated<br>sites, landscapes, habitats and protected<br>species; alongside creating a positive framework<br>for environmental enhancement more generally.   | Policies should set out a future vision for the<br>development of minerals and waste in<br>Nottinghamshire taking account of local needs<br>and circumstances. Where appropriate this<br>should include identifying suitable<br>development land and set out how<br>environmental assets should be protected.                                   | Include objectives on the use of natural<br>resources, sustainable waste management,<br>minerals supply, community involvement<br>and environmental protection. |
| 13: Transport, Jan 2011, a  | Promotes more sustainable transport choices,<br>accessibility, and the need to reduce journey<br>lengths.  | Plan policies should ensure that more<br>sustainable forms of transport are encouraged<br>wherever possible. Where there is a choice of<br>suitable sites policies should encourage the<br>use of existing infrastructure including the re-<br>use of previously developed land and buildings<br>where this could minimise transport distances. | Include objective(s) on sustainable transport<br>and re-use of previously developed land and<br>buildings.  |
| 22: Renewable Energy fa<br>c<br>e<br>s<br>la<br>f<br>f<br>f<br>f<br>f<br>f<br>f<br>f<br>t<br>t<br>t<br>t<br>t<br>t<br>t<br>t<br>t<br>t<br>t | Aims to reduce carbon dioxide emissions;<br>facilitate the delivery of the Government's<br>commitment on climate change and renewable<br>energy; and to contribute to the Government's<br>sustainable development strategy. Ensure that<br>local development documents contain policies to<br>encourage the development of renewable energy<br>sources including looking for opportunities to<br>incorporate small-scale renewable development<br>as part of all types of new development.<br>Renewable energy covers those energy flows<br>that occur naturally and repeatedly in the<br>environment – from the wind, the fall of water,<br>the movement of the oceans, from the sun and<br>also from biomass. This can include energy from<br>waste in some cases and Annexe C compares<br>various energy from waste technologies. | Consider opportunities to generate energy<br>from waste where this doesn't conflict with<br>other goals. Promote more energy efficient<br>development and encourage provision of on-<br>site renewables where viable.   | Include objectives on energy efficiency and renewable energy.   |
|   | Potential land use impacts on the quality of land,   | Policies should ensure that pollution from  | Include objective(s) to minimise climate  |

| Document  | Key objectives/targets   | Implications for MWDF   | Implications for SA   |
|---|--|---|---|
| Control, ODPM Nov 2004  | are capable of being a material planning<br>consideration. The planning system plays a key<br>role in determining the location of development<br>which may give rise to pollution, either directly or<br>indirectly, and in ensuring that other uses and<br>developments are not, as far as possible,<br>affected by major existing or potential sources of<br>pollution. Controls under the planning and<br>pollution control regimes should complement<br>rather than duplicate each other. Local<br>Development Documents should set out the<br>criteria against which applications for potentially<br>polluting developments should be considered.<br>Advocates use of the 'precautionary principle'.<br>Includes specific Annexes on air, water and<br>contamination. | minimum. Although emissions are regulated<br>and monitored by the Environment Agency,<br>development should be located and operated<br>so as to minimise transport distances, and<br>impacts, and avoid harmful emissions to air,<br>soil or water.   | reduce pollution impacts on air, soil and water quality.  |
| Planning Policy Guidance<br>24: Planning and Noise,<br>DoE 1994                             | The planning system should ensure that noise<br>sensitive properties are separated from major<br>sources of noise. Sets specific day and night<br>limits on noise levels for general development.<br>Specific guidance for minerals development is<br>covered in Minerals Policy Statement (MPS) 2 –<br>Annex 2.   | Policies to should ensure that noise impacts<br>from minerals and waste development are<br>minimised and do not exceed acceptable<br>limits.  | Include objective(s) to minimise noise<br>disturbance.  |
| Planning Policy Statement<br>25: Development and Flood<br>Risk, Revised March 2010,<br>DCLG | Flood risk should be an integral part of all land<br>use decisions. Aims to avoid inappropriate<br>development in areas at risk of flooding, and to<br>direct development away from areas at highest<br>risk. Sets out a sequential risk-based approach<br>and promotes use of the precautionary principle.<br>Encourages use of sustainable drainage systems<br>for new development. There is a requirement to<br>carry out Strategic Flood Risk Assessment for<br>development plans. The PPS highlights that the<br>impacts of climate change could lead to more<br>frequent, widespread and severe flooding events<br>and there is a need to 'future-proof' development<br>Annexes to the PPS provide contingency<br>estimates for sea level rises and peak rainfall.   | Nottinghamshire is most at risk from flooding<br>from rivers, the effects of poor surface water<br>drainage, rising groundwater or overwhelmed<br>sewers and drainage systems. Policies will<br>need to take account of the findings of the<br>Strategic Flood Risk Assessments carried out<br>across Nottinghamshire and seek to minimise<br>the impact of minerals and waste development<br>on flooding. Development should also be<br>designed for future flood resilience. Mineral<br>working is normally acceptable in areas of<br>flood risk but waste treatment or disposal<br>should generally be located away from flood<br>risk areas because of the pollution risk. Built<br>development, plant and storage areas should<br>be designed and located so as not to impede<br>flood flows. Promote the use of sustainable<br>drainage systems where appropriate. Old<br>mineral workings restored to lakes can affect | Include objective(s) to minimise flood risk<br>and reduce the impact of flooding on<br>minerals and waste developments. |

| Document   | Key objectives/targets   | Implications for MWDF   | Implications for SA   |
|--|--|---|---|
|  |  | flood flows although in some cases they can<br>be designed to create additional flood storage<br>areas.   |   |
| Planning Policy Statement<br>consultation: Planning for a<br>low carbon future in a<br>changing climate, March<br>2010, DCLG | Review of PPS1 supplement and renewable<br>energy guidance in PPS22. Planning should<br>shape places so as to help secure radical cuts in<br>greenhouse gas emissions. The location and<br>layout of new development should deliver the<br>highest viable energy efficiency, including the<br>use of decentralised energy; reduce the need to<br>travel, and the fullest possible use of sustainable<br>transport. It also promotes the delivery of<br>renewable and low carbon energy. Plan new<br>development to minimise vulnerability to the<br>effects of climate change.   | Ensure plan policies promote reductions in<br>emissions from minerals and waste<br>development, including transport, and ensure<br>new development is located and designed to<br>withstand the likely impacts of climate change<br>such as higher temperatures, drought, flooding<br>and storms. Consider opportunities to<br>generate energy from waste where this doesn't<br>conflict with other goals. Promote more<br>energy efficient development and encourage<br>provision of on-site renewables where viable. | Include objectives to minimise the impacts of<br>minerals and waste development on climate<br>change and energy use and to promote<br>renewable sources of energy where viable. |
| Draft Planning Policy<br>Statement: Planning for a<br>Natural and Healthy<br>Environment, March 2010,<br>(DCLG)              | Streamlines and consolidates existing planning<br>policy on biodiversity and a range of other<br>environmental issues. Aims to provide a clear,<br>strategic framework for the protection and<br>enhancement of the natural environment. Also<br>recognises that green infrastructure can provide<br>a wide range of environmental benefits in both<br>rural and urban areas including flood water<br>storage, sustainable drainage, urban cooling and<br>local access to shady outdoor space. It also<br>provides habitats for wildlife, and through the<br>creation and enhancement of "green corridors",<br>should aid the natural migration of more species<br>responding to the changing climate. | Policies should reflect the importance of<br>biodiversity and wider environmental issues,<br>including the importance of maintaining and<br>where possible enhancing our green<br>infrastructure.   | Include objectives to protect, and, where<br>possible, enhance biodiversity and green<br>infrastructure.  |
| Minerals Policy Statement<br>1: Planning and Minerals,<br>2006, CLG  | Sets out key principles and planning policy<br>objectives including the need to secure adequate<br>and steady supplies of minerals needed by<br>society and the economy within the limits set by   | Policies should provide for an adequate and<br>steady supply of minerals to meet<br>Nottinghamshire's own needs and to meet<br>regional or national needs as appropriate.   | Include objectives on sustainable<br>development and resource use; protection of<br>natural resources and the environment and<br>economic growth.                               |

| Document   | Key objectives/targets  | Implications for MWDF  | Implications for SA  |
|--|---|--|--|
|  | the environment. Secure closer integration of<br>minerals planning policy with national policy on<br>sustainable construction, waste management.<br>Protect and enhance nationally and<br>internationally designated areas of landscape<br>and nature conservation importance as well as<br>regional and local areas. Indicate areas where<br>future mineral working might be sustainable.<br>Take account of the contribution secondary or<br>recycled aggregates to supply and encourage<br>their use wherever practicable. Encourage<br>operators to maximise the efficient use of<br>extracted minerals. Encourage the recycling of<br>construction, demolition, excavation and<br>minerals waste, and identify sites where this<br>could take place. | This must be balanced against the need to<br>minimise the impact of development on the<br>environment. Where appropriate, polices<br>should identify suitable areas for future<br>working and encourage the sustainable use of<br>mineral resources including the use of<br>secondary and recycled aggregates. |  |
| Minerals Policy Statement<br>2; Controlling and mitigating<br>the environmental impacts<br>of minerals extraction in<br>England 2005                           | Environmental impacts from mineral working and<br>the transport of minerals should be kept to an<br>acceptable minimum. Encourage sensitive<br>working, restoration and aftercare practices.<br>Protect areas of nationally-designated landscape<br>or archaeological value, cultural heritage or<br>nature conservation importance from mineral<br>development, other than in exceptional<br>circumstances where it has been demonstrated<br>that the proposed development is in the public<br>interest.   | Policies should ensure that the environmental<br>impact of mineral operations is minimised and<br>areas of nationally designated landscape,<br>cultural heritage, archaeological and nature<br>conservation value protected.   | Include objectives to minimise the impact of<br>mineral working on landscape, cultural<br>heritage/archaeology and biodiversity. |
| Minerals Policy Statement<br>2: Controlling and Mitigating<br>the Environmental Effects<br>of Minerals Extraction in<br>England – Annex 1: Dust,<br>ODPM 2005  | Promotes good practice to minimise dust impacts<br>including measures such as dust action plans,<br>watering, hard surfacing, not working in windy<br>conditions, monitoring and stand-off distances<br>from sensitive properties/land-uses.  | Policies should ensure that dust impacts do<br>not pose a risk/nuisance to other sensitive<br>uses.  | Include objective(s) to minimise the impact<br>of mineral working on quality of life<br>(including dust impacts).                |
| Minerals Policy Statement<br>2: Controlling and Mitigating<br>the Environmental Effects<br>of Minerals Extraction in<br>England – Annex 2: Noise,<br>ODPM 2005 | Sets specific daytime, evening and night-time<br>noise limits. Promotes good practice in terms of<br>site location and layout, choice of plant and<br>equipment, plant maintenance, site operations,<br>the phasing of works on site and the use of<br>acoustic screening measures.   | Policies should ensure that noise impacts from<br>minerals development are minimised and do<br>not exceed acceptable limits.   | Include objective(s) to protect quality of life<br>and minimise noise disturbance.   |
| Minerals Policy Guidance 2:<br>Applications, permissions<br>and conditions 1998  | Outlines recommended steps when planning and developing a minerals extraction site, including development permission, consultations,  | Promote best practice for minerals operations<br>and include appropriate development<br>management policies.   | Include objective(s) to promote the sustainable location and operation of minerals sites.  |

| Document  | Key objectives/targets   | Implications for MWDF   | Implications for SA  |
|---|--|---|--|
|   | Environmental Assessment, planning application and planning permission   |   |  |
| Minerals Policy Guidance 3:<br>Coal mining and colliery<br>spoil disposal   | Ensure that the extraction of coal and disposal of<br>colliery spoil only takes place at the best balance<br>of community, social, environmental and<br>economic interests, consistent with the principles<br>of sustainable development.  | Policies should guide development to the most<br>appropriate location(s) taking account of wider<br>social, environmental and economic issues.  | Include objectives to minimise the<br>environmental impacts of development but<br>also consider possible social or economic<br>impacts.                        |
| Minerals Planning<br>Guidance 5; Stability in<br>surface mineral workings<br>and tips 2005  | Land stability should be considered in terms of<br>both extraction, and related development, and<br>subsequent restoration.  | Policies should ensure that land stability has<br>been taken in account and should direct<br>development away from areas of known risk.   | Ensure that land stability issues are addressed at site specific stage.  |
| Minerals Planning<br>Guidance 7; Reclamation of<br>mineral workings 1996  | Provides guidance on the effective restoration of<br>mineral sites including the planning and<br>preparation of restoration schemes, site<br>operation and financial provision as well as more<br>detailed information on soils and aftercare.   | Polices should ensure that restoration proposals form a key part of the planning process.   | Include objective(s) to minimise the adverse<br>environmental impacts of minerals extraction<br>and identify opportunities for environmental<br>improvements.  |
| Minerals Planning<br>Guidance 15; provision of<br>silica sand in England 1996   | Silica sand is a nationally important, essential,<br>raw material for many industrial processes.<br>Extraction must be carefully balanced against the<br>need and the impact it may have on the<br>environment. Efforts to recycle, and reduce the<br>impact of extraction on the environment should<br>be encouraged.   | Plan policies will need to ensure that an<br>adequate land bank of silica sand is<br>maintained whilst seeking to minimise any<br>environmental impacts.  | Include objective(s) to ensure an adequate<br>supply of minerals resources in line with<br>identified needs.   |
| National and Regional<br>Guidelines for Aggregates<br>Provision in England 2005<br>– 2020   | Sets out national and regional guidelines for aggregates provision in England  | Plan will need to identify broad areas that could provide adequate reserves to meet apportionment levels.   | SA outcomes will help inform the decision<br>making process on how to balance the<br>predicted demand for minerals against<br>social and environmental issues. |
| NPPF<br>Policy and Practice for the<br>Groundwater Protection:<br>Policy and Practice (GP3)<br>(Edition 1), Environment<br>Agency, 2008 | Aims to protect entire groundwater resource<br>including water supply and dependent<br>ecosystems but recognises that cannot protect<br>all groundwater from any change in quality.<br>Priority is to prevent pollution and reverse<br>environmentally significant deterioration.<br>Identifies a series of source protection zones<br>based on their vulnerability to potentially polluting<br>activities. Takes a precautionary approach in<br>most sensitive areas. | Mineral working and waste treatment /<br>disposal are all potentially harmful to<br>groundwater resources. Policies need to<br>ensure the appropriate location and operation<br>of development to minimise risk. Extensive<br>groundwater resources in Nottinghamshire are<br>likely to be a major constraint on future waste<br>disposal options. In some cases new or<br>improved waste water treatment facilities could<br>help improve overall water quality. | Include objective(s) to protect water quality<br>and enhance where possible.   |
| Revised Draft National<br>Policy Statement Fuel   | Part of a series of policy statements on nationally significant energy infrastructure. It recognises   | Although the specific guidance is aimed at electricity generating infrastructure ,which will  | Include objective(s) to maintain adequate supply of energy minerals supply and   |

| Document   | Key objectives/targets   | Implications for MWDF   | Implications for SA   |
|--|--|---|---|
| Fossil Fuel Electricity<br>Generating Infrastructure<br>(EN-2), Department of<br>Energy and Climate<br>Change, Oct 2010                              | that fossil fuel generating stations play a vital role<br>in providing reliable electricity supplies and a<br>secure and diverse energy mix as the UK makes<br>the transition to a low carbon economy.   | not be covered by minerals policies, there may<br>be local implications in terms of the need to<br>ensure adequate supplies of fossil fuels such<br>as coal, oil and gas.   | encourage more sustainable consumption to help conserve natural resources.  |
| Revised Draft National<br>Policy Statement for<br>Renewable Energy<br>Infrastructure (EN-3),<br>Department of Energy and<br>Climate Change, Oct 2010 | Part of a series of policy statements on nationally<br>significant energy infrastructure. It includes<br>guidance on biomass and energy from waste<br>projects above 50 megawatts. It highlights that<br>the combustion of biomass and the recovery of<br>energy from waste combustion, where in<br>accordance with the waste hierarchy, will play an<br>increasingly important role in meeting the UK's<br>energy needs. Where the waste burned is<br>deemed renewable, this can also contribute to<br>meeting the UK's renewable energy targets.   | Consider opportunities to generate energy<br>from waste where this doesn't conflict with<br>other goals. Promote more energy efficient<br>development and encourage provision of on-<br>site renewables where viable.   | Include objective(s) to promote renewable<br>sources of energy where viable.  |
| Draft Guidance on health in<br>strategic environmental<br>assessment: A<br>consultation, Department of<br>Health, 2007                               | Provides guidance on the coverage of health<br>issues within the SEA/SA process and highlights<br>the benefits of providing the right environment for<br>healthier lifestyles and ensuring wider health<br>issues are considered by plan makers where<br>relevant. Key considerations are emissions to<br>land air and water. Important policy links are to<br>the promotion of alternative forms of transport to<br>reduce emissions and increasing opportunities to<br>walk and cycle as well as reducing inequalities in<br>income and access to services. Climate impacts<br>may also be relevant e.g. the use of shade to<br>protect from heat. | Policies need to be aware of the wider<br>determinants of health and ensure that<br>emissions from minerals and waste<br>development are minimised whilst also<br>seeking to promote opportunities to provide<br>new walking/cycling routes and recreation<br>areas where feasible. Ensure that the likely<br>impacts of climate change are considered in<br>the location, design and layout of new<br>development. | Ensure that SA objectives consider the<br>impacts of emissions to land air and water,<br>including from transport, and assess<br>whether policies or proposal would help<br>contribute to healthier lifestyles e.g. through<br>recreation opportunities. Include<br>objective(s) on good design as part of<br>measures to adapt to climate change<br>effects. |
| Review of Environmental<br>and Health Effects of Waste<br>Management: Municipal<br>Solid Waste and Similar<br>Wastes, DEFRA 2004                     | Review of available research concludes that<br>there is little risk to health from waste<br>management activities. However, it does<br>suggest areas for possible future research.   | The perception of health risk is capable of<br>being a material consideration in planning<br>decisions although planning authorities should<br>be guided by the advice of relevant health<br>experts (PPS10). Policies should ensure that<br>minerals or waste development does not pose<br>any unacceptable additional risk based on<br>relevant advice.   | Include objective(s) to minimise health impacts   |
| Target Programme of<br>Improvements, Highways<br>Agency  | This programme, managed by the Highways<br>Agency, runs until 2021 and is designed to<br>improve the major trunk road and motorway<br>network through the building of new roads and<br>improving and widening existing ones. It  | Spatial approach will need to take account of<br>improvements to existing transport<br>infrastructure. Planned or completed road<br>improvements will be a consideration in<br>assessing overall transport impacts.   | Include objective(s) on sustainable transport<br>and making use of existing infrastructure to<br>minimise additional impacts.   |

| Document | Key objectives/targets  | Implications for MWDF | Implications for SA |
|----------|---|-----------------------|---------------------|
|          | identifies major road improvements to the M1, A1 and A453 in Nottinghamshire. |                       |                     |

## Regional

| Document                           | Key objectives/targets   | Implications for MWDF   | Implications for SA   |
|------------------------------------|--|---|---|
| East Midlands Regional<br>Strategy | <ul> <li>This is an interim Regional Strategy made up of the East Midlands Regional Plan 2009 and the Regional Economic Strategy 2003 which were combined in April 2010. Together these set out strategic policies on housing, economy and regeneration, natural and cultural resources and transport.</li> <li>The strategy aims to reduce the causes and impacts of climate change and encourages sustainable resource and energy consumption.</li> <li>Promotes efficient and effective use of existing infrastructure and encourages alternatives to road transport for freight. Nottinghamshire is expected to provide an additional 43,500 homes in Nottinghamshire by 2021.</li> <li>Local Development Frameworks should identify sufficient environmentally acceptable sources of minerals to maintain an appropriate supply of aggregates and other minerals of regional or national significance; safeguard important mineral resources and appropriate rail, wharf or pipeline facilities; and identify likely adverse environmental impacts and proposed mitigation and after uses.</li> <li>Waste priorities are to achieve zero waste growth by 2016; move waste management up the 'waste hierarchy' and to recycle 50% of municipal waste by 2015.</li> <li>The RSS gives specific guidance on waste</li> </ul> | Levels of economic growth and housing<br>development will impact on the demand for<br>construction and energy minerals. It could<br>also lead to the generation of more waste,<br>depending on whether or not the aspiration of<br>zero growth is successful. Policies will need to<br>ensure that there are adequate minerals<br>resources and waste treatment/disposal<br>facilities available to support this growth and to<br>meet the 50% municipal waste recycling<br>target. Policies will also need to take account<br>of the wider social, economic and<br>environmental goals set out in the Regional<br>Plan including issues such as resource<br>efficiency, making the best use of existing<br>buildings and infrastructure, encouraging low<br>carbon energy schemes and encouraging<br>development that reduces dependency on<br>travel.<br><b>N.B.</b> On 6 <sup>th</sup> July 2010 the revocation of<br>Regional Strategies with immediate effect was<br>announced by the Secretary of State for<br>Communities and Local Government. However<br>following a legal challenge Regional Strategies<br>have been reinstated and the RS therefore<br>remains part of the statutory development plan<br>at time of writing. | Ensure that SA objectives address the need<br>to provide adequate supplies of minerals<br>and appropriate waste management<br>facilities; minimise environmental impacts,<br>use resources as sustainably as possible,<br>assist low carbon energy generation and<br>support wider social and economic goals<br>where possible. |

| Document  | Key objectives/targets  | Implications for MWDF   | Implications for SA  |
|---|---|---|--|
| Putting Wildlife Back on the<br>Map – A Biodiversity<br>Strategy for the East<br>Midlands, 2006 (East<br>Midlands Biodiversity<br>Forum & EMRA) | <ul> <li>volumes to be managed in each area and promotes a pattern of centralised development for larger facilities in the Three Cities and Northern Sub-areas which cover Nottinghamshire.</li> <li>It also highlights additional waste water treatment capacity needs around Mansfield, Worksop and Newark to meet proposed housing development. Infrastructure.</li> <li>Priorities for low carbon energy generation include safeguarding sites for access to coal mine methane reserves, encourage CHP provision and consider safeguarding former power station and colliery sites for low carbon energy generation.</li> <li>Works with the objectives of the Biodiversity Strategy for England. The objectives are to conserve designated areas in the East Midlands, restore degraded wildlife and create new areas, create a high quality natural environment for the benefit of humans and for financial sustainability of the natural environment, and to monitor the state of wildlife.</li> </ul> | Minerals and waste development has the<br>potential to harm the natural environment but<br>site restoration schemes may also provide<br>opportunities for enhancement through the<br>creation of new habitat. Policies should<br>therefore seek to protect internationally,<br>nationally and locally designated sites and<br>species as well as recognising the importance<br>of wider nature conservation and countryside<br>interests. | Include objective(s) to minimise impacts on biodiversity.  |
| Regional Strategic River<br>Corridors Initiatives, 2004,<br>EMRA  | Promotes an integrated spatial development<br>strategy for the management and enhancement<br>of the natural, cultural and historic environment<br>of river corridors. Has a wide range of social,<br>cultural, economic and environmental goals.  | Take account of any projects or initiatives<br>identified through when developing plan<br>policies. Investigate potential for water-borne<br>transport where this could meet environmental<br>and economic goals.   | Include objectives to minimise impacts on river quality and to consider potential transport benefits where viable                |
| Waste Strategy for the East<br>Midlands: January 2006,<br>East Midlands Regional<br>Assembly  | Sets ambitious targets for recycling municipal<br>waste and landfill reduction – 25% by 2005, 30%<br>by 2010 and 50% by 2015. Identifies acute<br>shortage of waste treatment and disposal<br>facilities within the East Midlands. Seeks to raise<br>waste awareness and promote best practice in<br>all sectors.   | Enable the delivery of an appropriate range of<br>waste management facilities to meet<br>anticipated needs and drive a move away from<br>landfill towards more sustainable forms of<br>waste management in line with targets.   | Include objectives(s) on sustainable waste<br>management and the provision of<br>appropriate waste management<br>infrastructure. |
| 6Cs Green Infrastructure<br>Strategy, 2010, Chris<br>Blandford Associates.  | This comprises 6 volumes of technical<br>information and guidance on the combined East<br>Midlands Growth Point which covers the three<br>cities of Nottingham, Derby and Leicester and<br>their respective counties. The Strategy''s long  | Policies should reflect the importance of Green<br>Infrastructure when considering the location,<br>design and operation of development and<br>identify any opportunities to enhance existing,<br>or provide additional green space.  | Include objectives(s) on protecting and maintaining green structure assets.  |

|--|---|---|--|
| County Council, 2007,<br>(NCC)   | years).   |   |  |
| Nottingham Energy<br>Strategy 2010, Nottingham<br>City Council   | Aims to accelerate Nottingham's development as<br>the UK's leading City in low carbon energy<br>security. Prioritises a 26% reduction in carbon<br>dioxide levels and 20% energy generation from<br>low or zero carbon sources by 2020. Proposals<br>for biomass processing and transfer, a biomass<br>CHP plant linked to the district heating network<br>and a significant anaerobic digestion are all<br>designed to help meet national and local targets<br>for heat and power. Significant expansion of the<br>existing energy from waste facility (Eastcroft<br>Incinerator) is envisaged as playing a major part<br>in delivering much of the additional heat and<br>power required. | Promote/consider opportunities to offset fossil<br>fuel use through the use of energy from waste<br>technologies able to provide heat and/or power<br>where this does not conflict with the waste<br>hierarchy.   | Include objectives to minimise carbon<br>dioxide emissions from minerals and waste<br>development and transport; encourage<br>energy efficiency and promote appropriate<br>opportunities for energy recovery.                                    |
| Local Transport Plan for<br>Greater Nottingham 2006-<br>2011, March 2006 (NCC &<br>Nottingham City)<br>North Nottinghamshire<br>Local Transport Plan,<br>March 2006, (NCC)<br>Nottingham Local Transport<br>Strategy 2011-2026, April<br>2011 (Nottingham City<br>Council) | Aim to improve road safety and traffic<br>management and reduce congestion; improve air<br>quality and protection of the environment;<br>enhance quality of life and support regeneration<br>and neighbourhood renewal. Seek to tackle and<br>reduce air pollution, specifically within Air Quality<br>Management Areas, and reduce greenhouse gas<br>emissions from transport and the use of fossil<br>fuels. Aim to reduce the need to travel, minimise<br>use of green field land, and reduce the impact of<br>freight traffic. Set detailed programmes of<br>infrastructure improvements.   | Promote a spatial approach that minimises the<br>need to transport minerals and waste, makes<br>use of existing transport infrastructure and<br>encourage alternatives to road transport where<br>possible. Planned improvements to existing<br>transport infrastructure may be significant in<br>deciding on suitable sites for future<br>development. | Include objectives to reduce the impacts of<br>minerals and waste transport on air quality<br>and encourage sustainable transport<br>measures including alternative forms of<br>transport and making the best use of<br>existing infrastructure. |
| A Breath of Fresh Air For<br>Nottinghamshire, 2008,<br>(The Nottinghamshire<br>Environmental<br>Protection Working Group)  | Outlines how the local authorities of<br>Nottinghamshire intend to collectively tackle<br>problems highlighted in their review and<br>assessments. Aims to minimise air pollution<br>and the impact of global warming and climate<br>change; encourage sustainable development<br>protect the health and wellbeing of the<br>population, and encourage sustainable<br>improvements in air quality.  | Ensure minerals and waste development<br>and/or transport does not have a harmful<br>impact on existing air quality.  | Include objective(s) to minimise impacts on air quality impacts.   |
| 6Cs Green Infrastructure<br>Strategy volume 6:<br>Strategic GI Network for the<br>Nottingham Principal Urban<br>Area and Sub-Regional  | Collectively the various Green Infrastructure<br>Strategies for the Greater Nottingham area and<br>the remaining Districts identify existing Green<br>Infrastructure assets, deficiencies and<br>opportunities. They highlight key landscape and  | Policies should reflect the importance of maintaining and where possible enhancing our green infrastructure.  | Include objectives to protect, and, where possible, enhance green infrastructure.  |

| _Document   | Key objectives/targets   | Implications for MWDF   | Implications for SA   |
|---|--|---|---|
| Centres, 2010, Chris<br>Blandford Associates<br>Interim Planning Guidance<br>Note 11: Green<br>Infrastructure, April 2009,<br>Mansfield District Council<br>Green Infrastructure<br>Strategy, May 2010<br>Bassetlaw, District Council<br>A Green Infrastructure<br>Strategy for Newark and<br>Sherwood, February 2010,<br>Newark and Sherwood<br>District Council | nature conservation designations as well as<br>significant water features and green spaces or<br>corridors that help to support important habitats<br>and species. Sherwood Forest, Greenwood<br>Community Forest and the River Trent are<br>significant examples but each areas has its own<br>important areas of countryside, woodland,<br>grassland, river corridors and public open space. |   |   |
| Natural England and The<br>Wildlife Trust 6Cs Growth<br>Point Biodiversity<br>Opportunity Mapping – Pilot<br>Study, Chris Blanfords<br>Associates, June 2009  | Tests the methodology for biodiversity<br>opportunity mapping across the 6Cs region for its<br>applicability across the East Midlands Region. As<br>part of this it completed the opportunity mapping<br>for the 6Cs area – identifying opportunities for<br>new or enhanced habitats, including areas for<br>investment in 'landscape-scale' strategic<br>biodiversity assets.                | Minerals and waste development can impact<br>on biodiversity, but also presents opportunities<br>for contributing to it. Policies should seek to<br>protect biodiversity and seek to develop it<br>where opportunities arise, taking into account<br>such mapping where it is available.  | Include objective(s) to minimise impacts on<br>biodiversity and identify opportunities for<br>enhancement.                |
| Nottinghamshire Local<br>Biodiversity Action Plan,<br>and associated species and<br>habitat protection plans,<br>1998, Nottinghamshire<br>Biodiversity Action Group   | Identifies those habitats and species within<br>Nottinghamshire which are particularly under<br>threat, and develops action plans for their<br>conservation and enhancement.   | Minerals and waste development can have an<br>impact on biodiversity but there may also be<br>opportunities to replace lost habitats and<br>create new areas of habitat. Policies should<br>protect biodiversity interests, require mitigation<br>for essential losses and encourage the<br>creation of suitable new or replacement<br>habitat. | Include objective(s) to minimise impacts on<br>biodiversity and identify opportunities for<br>enhancement.                |
| Ambitious for Wildlife.<br>Position Statement on<br>Biodiversity, Nottingham<br>City Council, 2007  | Sets out the City Council's committment to<br>protecting and enhancing biodiversity and the<br>methods that will be used to deliver<br>improvements and monitor their effects.<br>Highlights that all people are dependent on<br>biodiversity for their health and wellbeing.  | Policies should reflect the importance of biodiversity on the health and wellbeing of Nottingham's communities.   | Implications for SA: Include objective(s) to deliver improvements to biodiversity.  |
| Breathing Space: Revised<br>Strategy for the<br>Management and<br>maintenance of<br>Nottingham's Open and<br>Green Space 2010 – 2020,   | Over the next 10 years aims to provide quality<br>open and green spaces; increase public<br>involvement and accessibility to promote<br>physical and mental well being; raise<br>environmental sustainability, promote<br>biodiversity, and support wildlife; develop open   | Policies should reflect the importance of maintaining and where possible enhancing open and green spaces.   | Include objective(s) to minimise impacts on<br>open space and biodiversity and identify<br>opportunities for enhancement. |

| Document  | Key objectives/targets  | Implications for MWDF   | Implications for SA   |
|---|---|---|---|
| Nottingham City Council   | and green space to provide opportunities for<br>mitigation and adaptations for climate change<br>and guide local planning policy.   |   |   |
| Nottinghamshire Heathland<br>Strategy, Sherwood<br>Habitats Forum 2004  | Promote the conservation, management and<br>enhancement of all Nottinghamshire heathlands<br>and encourage the creation of new heathlands<br>where appropriate. Increase coverage by a<br>further 400ha, and bring 80% of registered sites<br>into appropriate management by 2010.  | Policies should reflect the importance of<br>maintaining and where possible adding to our<br>heathland habitats. Mineral working,<br>especially, has the potential to create new<br>heathland as part of site mitigation and<br>restoration proposals.  | Include objective(s) to protect existing<br>heathland and increase heathland coverage<br>where possible.  |
| Sherwood Study: A vision<br>for Sherwood Forest,<br>Sherwood Study Advisory<br>Group, October 2000                      | Aims to conserve Sherwood Forest area's<br>unique heritage. Amongst wide ranging social<br>and economic objectives, seeks to recreate an<br>extensive mosaic of woodland and heathland<br>habitats and promote sensitive new<br>development.  | Policies should aim to protect existing habitat<br>and encourage habitat recreation as part of<br>restoration proposals and/or mitigation where<br>viable.  | Include objectives to protect and enhance important habitats  |
| Nottinghamshire<br>Countryside Appraisal,<br>1997, Nottinghamshire<br>County Council                                    | A landscape appraisal of the Nottinghamshire<br>countryside, which has been used as a basis for<br>defining Mature Landscape Areas and identifying<br>key threats and opportunities across the different<br>landscape areas. This appraisal is being<br>selectively replaced by an ongoing series of<br>landscape character assessments.  | Ensure that the location and design of<br>minerals and waste sites takes account of<br>landscape character and minimises the impact<br>of development on existing landscape features<br>(including reference to specific objectives/<br>actions for each character area at site specific<br>stage). Encourage opportunities to improve or | Include objective(s) to minimise the impact<br>on landscape, protect overall landscape<br>character and improve or enhance the local<br>landscape where possible. |
| Nottinghamshire<br>Landscape Character<br>Assessments 2009/2010,<br>coordinated by<br>Nottinghamshire County<br>Council | Updates and substantially replaces the 1997<br>Countryside Appraisal. The assessment has<br>been prepared in three separate reports covering<br>the areas of Bassetlaw, Newark and Sherwood<br>and the Greater Nottingham area (including the<br>Trent Washlands). Coverage has been<br>completed for Mansfield which although originally<br>intended to be part of the Greater Nottingham<br>Report has now been published as a separate,<br>standalone report. Important influences on            | enhance the local landscape where<br>appropriate. Guidance on the Trent Washlands<br>in particular will be important in assessing<br>potential sand and gravel reserves as this is<br>the most significant remaining resource area.   |   |
| Nottinghamshire County  | character include landform, ecological<br>characteristics, landform, settlement patterns,<br>woodland cover, field density pattern and visible<br>archaeology. A series of objectives and specific<br>landscape actions have been prepared for each<br>landscape character area. For the Trent<br>Washlands in particular, restoration of mineral<br>workings should ensure a mosaic of local habitat<br>types to maintain variety in the landscape.<br>Defines different landscape types. Does not |   |   |

| Document   | Key objectives/targets   | Implications for MWDF   | Implications for SA   |
|--|--|---|---|
| Council Historic Landscape<br>Characterisation   | provide any statutory protection but highlights<br>that features such as medieval field patterns at<br>Laxton are irreplaceable and may be only<br>remaining examples in UK or Europe.   |   |   |
| On-Trent Action Plan 2010<br>– 2016  | Partnership with aims including creation of<br>diverse wetland habitats and improving land/<br>water management practices along Trent Valley.<br>Intended to benefit local people and natural and<br>cultural heritage and seeks to reverse the decline<br>in biodiversity by securing a better balance<br>between wildlife and agriculture, commercial<br>activity and development. | The Trent Valley is a significant mineral<br>resource for sand and gravel and policies for<br>future extraction will need to take account of<br>the project's specific aims, especially in<br>relation to sustainable mineral extraction and<br>restoration opportunities that could include<br>wetland, open space and recreation schemes. | SA process will help to identify ways to<br>minimise harmful impacts and maximise<br>opportunities to deliver social,<br>environmental, and economic gains. |
| River Basin Management<br>Plan Humber River Basin<br>District, Environment<br>Agency, 2009   | Sets out the pressures facing the water<br>environment in the Humber River Basin and<br>actions that are needed to address them.   | Policies should take account of Environment<br>Agency guidance and advice on flooding and<br>other issues affecting river management.   | Include objective(s) to maintain river quality<br>and minimise the risk and/or impacts of<br>flooding in relation to minerals and waste<br>development.     |
| Environment Agency Fluvial<br>Trent Strategy.  | Considers options to reduce flooding risks in the Trent Catchment area.  |   |   |
| River Trent Catchment<br>Flood Management Plan,<br>January 2009, Environment<br>Agency   | The River Trent Catchment Flood Management<br>Plan (CFMP) sets out the Environment Agency's<br>preferred plan for sustainable flood risk<br>management over the next 50–100 years.   |   |   |
| Soar Catchment<br>Abstraction Management<br>Strategy, Environment<br>Agency, 2006<br>Lower Trent and Erewash<br>Catchment Abstraction<br>Management Strategy,<br>Environment Agency, 2008<br>Staffordshire Trent Valley<br>Catchment Abstraction<br>Management Strategy,<br>Environment Agency, 2007 | Detail the abstraction licensing strategy in the<br>catchments for the next few years. Sets out<br>whether licenses will be issued and the<br>conditions that will be applied across the board<br>to cope with specific circumstances.   | Policies should take account of Environment<br>Agency guidance and strategy on water<br>abstraction and other issues affecting<br>availability of water in the local area.  | Include objectives on managing water<br>availability and demand.  |
| Water Resource<br>Management Plan, Severn<br>Trent, 2010   | Sets out how the company intends to meet water<br>supplies over the next 25 years. Also looks at<br>longer time water resource development.  | Policies should ensure that development will not prejudice the supply of future water supply.   | Include objectives on managing water availability and demand.   |
| Nottingham Surface Water<br>Management Plan,<br>Nottingham City Council  | A living document monitoring the work completed<br>in implementing SWMP guidance from DEFRA.<br>Functional tool to enable 'real-time' advice to be<br>given on drainage. Aims to reduce the number<br>of properties at risk from surface water flooding,   | Policies will need to take account of flood risk evidence.  | Include objective(s) on minimising and managing flood risk.   |

|--|---|--|---|--|--|
|  | to develop a knowledge base/sharing system<br>and create a framework to assist critical<br>infrastructure planning.   |  |   |  |  |
| Nottinghamshire Strategic<br>Flood Risk Assessment<br>report 2011                              | Identifies all areas of flood risk in the county<br>based on data collected from a range of sources.<br>Highlights compatible and incompatible<br>development and broad areas of constraint.  | Policies will need to take account of the<br>findings of the various Strategic Flood Risk<br>Assessments carried out across<br>Nottinghamshire and seek to guide   | Include objective(s) to minimise flood risk<br>and reduce impact of flooding on minerals<br>and waste developments. |  |  |
| Greater Nottingham<br>Strategic Flood Risk<br>Assessment, 2008, Black<br>and Veatch            | Covers the areas of Nottingham City, Gedling,<br>Rushcliffe, Broxtowe and Erewash (Derbyshire)<br>and identifies that over 20,000 properties along<br>the urban part of the River Trent are potentially<br>at risk from a 1 in 100 flood event. The main<br>areas affected are Nottingham city centre out to<br>Colwick, Netherfield and Burton Joyce to the<br>east and Dunkirk, Rylands, Attenborough and<br>Long Eaton to the west. Recent flood defence<br>improvements are expected to protect West<br>Bridgford, Wilford and Barton-in-Fabis. Other<br>potential sources of flooding are also identified<br>such as sewer and surface water flooding. | development towards the most suitable<br>locations using the sequential approach set<br>out in PPS25. Mineral working (sand and<br>gravel) is normally acceptable in areas of flood<br>risk but waste treatment or disposal should<br>generally be located away from flood risk<br>areas because of the pollution risk. Built<br>development, plant and storage areas should<br>be designed and located so as not to impede<br>flood flows. Promote the use of sustainable<br>drainage systems where appropriate. Also<br>ensure development is designed to withstand<br>possible future flooding. |   |  |  |
| Ashfield District Council<br>Strategic Flood Risk<br>Assessment, February                      | Flood risk is relatively low compared to other<br>districts but development within Ashfield could<br>increase risk in Nottingham. River and surface   |  |   |  |  |
| 2009, Ashfield District<br>Council   | water flooding are the main concerns and are<br>most likely to affect parts of Kirkby-in-Ashfield<br>and surrounding areas, Sutton-in-Ashfield and<br>extensive parts of Hucknall. The risk of ground<br>water flooding is low although the legacy of mine<br>working means there is a potential long term risk<br>of minewater rebound in some areas.  |  |   |  |  |
| Bassetlaw District Council<br>Strategic Flood Risk<br>Assessment, July 2009,<br>JBA Consulting | The main risk within Bassetlaw is from fluvial<br>flooding. The urban areas of Worksop and<br>Retford have minimal flood defences. In rural<br>areas, villages along the River Trent or overlying<br>clay based soils are most at risk. Groundwater is<br>not thought to be an issue, although localised<br>problems may occur over time in the vicinity of<br>abandoned mine pumping operations.   |  |   |  |  |
| Mansfield District Council<br>Strategic Flood Risk<br>Assessment, June 2008,<br>RPS Group      | In general the Mansfield District is considered to<br>be at low risk of flooding although specific parts<br>of Mansfield town centre, Pleasley, Church<br>Warsop, Market Warsop and Meden Vale are  |  |   |  |  |

| Document   | Key objectives/targets  | Implications for MWDF   | Implications for SA  |
|--|---|---|--|
| Newark and Sherwood<br>District Council Strategic<br>Flood Risk Assessment,<br>July 2009, WSP<br>Development and<br>Transportation | <ul> <li>potentially at risk from fluvial flooding. There is considered to be sufficient unaffected land available to be able to avoid development within the identified flood risk areas.</li> <li>The greatest risk is seen as flooding from the River Trent which would affect Newark and many of the outlying villages along the Trent Valley. Other parts of the District, including Ollerton and Boughton, are also at risk of fluvial flooding with possible surface water and sewer flood issues in Lowdham, Southwell and Boughton. The risk for other areas is regarded as minimal. Waste and mineral development within the District should be sensitive to flood risk. Sites should take into consideration the location of flood zones and should not adversely affect flood regimes.</li> </ul> |   |  |
| Greater Nottingham<br>Scoping Water Cycle<br>Study, Scott Wilson, May<br>2009  | Assesses water supply, discharge and treatment<br>issues across Greater Nottingham area. No<br>significant supply issues have been identified at<br>the outset but this is to be kept under review.<br>Highlights potential reductions in water quality<br>arising from additional effluent discharge from<br>proposed future development (housing,<br>employment etc.)   | Ensure provision of appropriate waste water<br>treatment infrastructure to meet identified<br>needs. Take account of water supply,<br>treatment and drainage issues when planning<br>the location of new minerals and waste<br>development. | SA process should help to assess likely<br>impacts on water supply/treatment needs.<br>Include objective(s) to ensure adequate<br>provision of appropriate waste management<br>infrastructure. |
| Greater Nottingham and<br>Ashfield Outline Water<br>Cycle Study, Entec,<br>coordinated by Gedling<br>Borough Council, 2010         | Considers the likely water related impacts from<br>the level of development identified in the RSS.<br>Looks at difference scenarios and assesses the<br>impact on clean water, waste water, water<br>resources, water quality and flood risk. Strategic<br>level intervention and mitigation measures are<br>identified.  |   |  |
| Bassetlaw District Water<br>Cycle Study  | Identifies possible water supply and treatment<br>constraints on housing and employment<br>growth planned for Bassetlaw up to 2026. It<br>suggests possible constraints with regards to<br>treatment capacity, the clean water network and<br>water resources in Bassetlaw.   |   |  |

| Document   | Key objectives/targets  | Implications for MWDF  | Implications for SA  |
|--|---|--|--|
| Mansfield Water Cycle<br>Study   | Some of the potential growth areas around<br>Mansfield would require improved water<br>infrastructure but no major supply concerns have<br>been identified. Large scale development<br>around Mansfield and Forest Town could require<br>increased waste water treatment capacity.  |  |  |
| Newark and Sherwood<br>District Water Cycle Study:<br>Detailed Strategy, Sept<br>2009, JMP Consultants Ltd | Identifies possible waste water treatment<br>capacity issues in some areas but these are not<br>considered an overriding constraint to future<br>development proposals in the district.<br>Development south or south-east of Newark<br>should be carefully planned so as to avoid a<br>negative impact on the existing drainage<br>systems/floodplain.   |  |  |
| Sustainable Developer<br>Guide for Nottinghamshire,<br>July 2004   | Aims to signpost better construction and site<br>management practices, energy and water<br>efficiency, and raise awareness of wider<br>sustainability issues. Re-using or adapting old<br>buildings helps retain energy and materials<br>already invested, and reduce demolition waste.   | Encourage best practice in the construction<br>and operation of new development to minimise<br>waste, maximise re-use and use natural<br>resources (including minerals, water and<br>energy) efficiently. Promote the re-use of<br>existing buildings wherever possible. | Include objectives on sustainable waste<br>management, the efficient use of<br>natural resources, energy efficiency and<br>the sustainable use of land and<br>buildings. |
| Nottinghamshire Integrated<br>Municipal Waste<br>Management Strategy 2001                                  | Sets out the County Council's plans to manage<br>municipal waste and meet national recycling<br>targets. Identified a need for additional waste to<br>energy or Mechanical Biological Treatment to<br>meet future needs and increase composting<br>provision.   | Policies should help to secure the delivery of<br>appropriate new waste sites needed to help<br>deliver each authority's municipal waste<br>management contracts.  | Include objective(s) on sustainable waste<br>management and the provision of<br>appropriate waste management<br>infrastructure.  |
| A Waste-Less Nottingham,<br>Waste Strategy 2010 –<br>2030, December 2010,<br>Nottingham City Council       | Sets out the City's Councils plans to manage<br>municipal waste over the next 20 years and<br>initiatives to help manage other wastes and<br>reduce waste production. Aims to increase re-<br>use and recycling to 55% or higher and is<br>aligned with Nottingham's energy strategy to<br>help meet carbon reduction goals through the<br>use of waste as a source of energy. Includes<br>target to recover 47 million kilowatt hours of<br>energy from waste through the Eastcroft<br>incinerator and a planned anaerobic digestion<br>plant. Also identifies a possible need for a<br>second household waste recycling facility. |  |  |
| Nottinghamshire County<br>Joint Strategic Needs  | Intended to drive the commissioning of health services, Children and Young People's Services  | Ensure policies minimise possible impacts of minerals and waste development on health,   | Include objective(s) to minimise the impacts of minerals and waste development on  |

## **Glossary of Terms and Abbreviations**

**Appropriate Assessment (AA):** The process required by EU Directive 92/43/EEC (the Habitats Directive) for formal assessment of plans to ensure protection of integrity of Natura 2000 sites.

**Annual Monitoring Report (AMR):** A report which is produced annually to establish what is happening now and what may happen in the future and compare trends against existing LDF policies to determine if changes need to be made.

**Air Quality Management Area (AQMA):** If National Air Quality Objectives are not likely to be achieved in a specific area, a local authority must declare an AQMA and develop and Air Quality Action Plan to improve quality.

**Biodiversity:** The range of life forms that constitute the living world, from microscopic organisms to the largest tree or animal, and the habitat and ecosystem in which they live.

**Brownfield Land:** A general term used to define land which has been previously developed.

**Conservation Area:** An area designated by Local Planning Authority under Section 69 of the Planning (Listed Buildings and Conservation Areas) Act, 1990, regarded as being an area of special architectural or historic interest, the character or appearance of which is desirable to preserve or enhance.

**Core strategy:** Should set out the key elements of the planning framework for the area. It should comprise: a spatial vision and strategic objectives for the area; a spatial strategy; core policies; and a monitoring and implementation framework with clear objectives for achieving delivery.

**Development Plan:** The statutory framework for planning decisions, comprising the Regional Spatial Strategy and the Development Plan Documents prepared by local planning authorities (including the County Council and District Councils)

**Development Plan Document (DPD):** A Spatial planning document which is part of the Local Development Framework, subject to extensive consultation and independent examination.

**Green Belt:** An area of land surrounding a City having five distinct purposes: To check the unrestricted sprawl of large built up areas; to prevent neighbouring towns from merging into one another; to assist in safeguarding the countryside from encroachment; to preserve the setting and special character of historic towns, and; to assist in urban regeneration by encouraging the recycling of derelict and other urban land. (As set out in PPG2 'Green Belts', ODPM, January 1995).

Ha/ha (Hectare): An area 10,000 sq. metres or 2.471 acres.

**Listed Buildings:** A building or structure of special architectural or historic interest included on a list prepared by the Secretary of State for Culture, Media and Sport under Section 1 of the Planning (Listed Buildings and Conservation Areas) Act, 1990. Consent is normally required for its demolition in whole or part, and for any works of alteration or extension (both internal and external) which would affect its special interest.

**Local Biodiversity Action Plan (LBAP):** A local plan that identifies local biodiversity priorities and determines the contribution they can make to the delivery of the national Species and Habitat Action Plan targets. Often, but not always, LBAPs conform to county boundaries.

**Local Development Document (LDD):** A Document that forms part of the Local Development Framework and can be either a Development Plan Document or a Supplementary Planning Document.

**Local Development Framework (LDF):** A portfolio of Local Development Documents which set out the spatial strategy for the development of the District.

**Local Nature Reserve (LNR):** Established by a Local Authority under the powers of the National Parks and Access to the Countryside Act 1949. **Local Plan:** Comprises a Written Statement and a Proposals Map. The Written Statement includes the Authority's detailed policies and proposals for the development and use of land together with reasoned justification for these proposals.

**Mature Landscape Areas:** Areas identified by the County Council as being of landscape importance on the basis that they represent those areas least affected by intensive arable production, mineral extraction, commercial forestry, housing, industry, roads etc.

**Minerals and Waste Development Framework (MWDF):** The portfolio of documents containing the County Councils policy framework for minerals and waste planning, comprising a range of Local Development Documents together with a Minerals and Waste Development Scheme and Annual Monitoring Reports.

**Minerals and Waste Development Scheme (MWDS):** A document within the MWDF setting out a range of LDDs that will be prepared, together with the timetable for their preparation.

**Minerals Policy Guidance/Statement (PPG/PPS):** Published by the Office of the Deputy Prime minister to provide concise and practical guidance specifically relating to minerals extraction.

**Open Space:** Any un-built land within the boundary of a village, town or city which provides, or has the potential to provide, environmental, social and/or economic benefits to communities, whether direct or indirect.

**Planning and Compulsory Purchase Act 2004:** Government legislation which sets out the changes to the planning system.

**Planning Policy Guidance/Statement (PPG/PPS):** Published by the Office of the Deputy Prime Minister to provide concise and practical guidance. These are produced for a variety of specific topics and can be found at www.communities.gov.uk.

**Previously Developed Land:** Land which has in the past been a developed site (see Brownfield land)

**Regional Spatial Strategy (RSS):** Strategic planning guidance for the Region that Development Plan Documents have to be in general conformity with. **Regional Transport Strategy (RTS):** aims to integrate land-use planning and transport planning to steer new development into more sustainable locations, reduce the need to travel and enable journeys to be made by more sustainable modes of transport.

**Renewable Energy:** The term 'renewable energy' covers those resources which occur and recur naturally in the environment. Such resources include heat from the earth or sun, power from the wind and from water and energy from plant material and from the recycling of domestic, industrial or agricultural waste, and from recovering energy from domestic, industrial or agricultural waste. **Saved Policies:** Policies in the current Local Plan which have been safeguarded and then reused in other documents.

**Scheduled Ancient Monument (SAM):** 'Scheduling' is shorthand for the process through which nationally important sites and monuments are given legal protection by being placed on a list, or 'schedule'. English Heritage takes the lead in identifying sites in England which should be placed on the schedule by the Secretary of State for Culture, Media and Sport.

**Site of Importance for Nature Conservation (SINC):** Site of local importance for nature conservation or geology identified by the Nottinghamshire Wildlife Audit Steering Group.

**Site of Special Scientific Interest (SSSI):** The designation under Section 28 of the Wildlife and Countryside Act, 1981, of an area of land of special interest by reason of its flora, fauna, geological or physiological features.

**Special Area of Conservation (SAC):** areas which have been given special protection under the European Union's Habitats Directive. They provide increased protection to a variety of wild animals, plants and habitats and are a vital part of global efforts to conserve the world's biodiversity.

**Strategic Flood Risk Assessment (SFRA):** Local planning authorities are required to prepare this assessment in consultation with the Environment Agency. The SFRA will be used to refine information on the areas that may flood and will provide the basis for a sequential approach to development allocation and control.

**Supplementary Planning Document (SPD):** Provide supplementary information in respect of the policies in Development Plan Documents. They do not form part of the Development Plan and are not subject to independent examination.
