which excludes those not seeking or available for work. Unemployment rates are not the proportion of the total population who are unemployed. They are the proportion of the economically active population (those in work plus those seeking and available to work) who are

unemployed. The long-term increase in the proportion of young people going into full-time education reduces the size of the economically active population and therefore increases the unemployment rate.

The Employment Bulletin uses the Claimant Count rather than the count of JSA claimants. This experimental series counts the number of people claiming Jobseeker's Allowance plus those who claim Universal Credit and are required to seek work and be available for work. It replaces the number of people claiming Jobseeker's Allowance as the headline indicator of the number of people claiming benefits principally for the reason of being unemployed.

Claimant count.

This experimental series counts the number of people claiming Jobseeker's Allowance plus those who claim Universal Credit and are required to seek work and be available for work and replaces the number of people claiming Jobseeker's Allowance as the headline indicator of the number of people claiming benefits principally for the reason of being unemployed.

All data are rounded to the nearest 5 and may not precisely add to the sum of the number of people claiming JSA, published on Nomis, and the number of people claiming Universal Credit required to seek work, published by DWP, due to independent rounding.
